paraplegia spastic-precocious puberty syndrome

Eponyms: — Raphaelson syndrome

Inheritance: genetic heterogeneity
supposed autosomal dominant

Semeiological Synthesis: Genito-neurologic disorder. Early infancy onset; spastic paraplegia, mild mental retardation, precocious puberty due to Leydig cell hyperplasia.

Group Sub group Signs: GENITAL DISORDERS
genital dysfunctions
- puberty, precocious; sexual precocity

NEUROLOGICAL DISORDERS
mental retardation
- mental retardation
neurological dysfunctions
- paraplegia, spastic
- spasm, spastic paralysis, spastic paraplegia

OTHERS
inheritance
- inheritance, genetic heterogeneity
supergroups
- genito-neuro disorders

Super group: genito-neuro disorders

Super aggreg. Aggregations: ISOLATED NEUROLOGICAL DISORDERS
paraplegia, spastic

Differential diagnosis: 28695 Fryns-Hellemans-Van den Berghe syndrome
27487 mental retardation X-linked-precocious puberty
21950 puberty precocious
21945 puberty, precocious male-limited

Aggregation(s) [in differential diagnosis]:
- paraplegia, spastic
