<b>1</b>	<b>Special Relativity: Setting the Stage</b>	<b>1</b>
1.1	Introduction	1
1.2	Classical Physics Between the End of the XIX and the Dawn of the XX Century	2
1.2.1	Maxwell Equations	2
1.2.2	Luminiferous Aether and the Michelson Morley Experiment	4
1.2.3	Maxwell Equations and Lorentz Transformations	6
1.3	The Principle of Special Relativity	8
1.3.1	Minkowski Space	10
1.4	Mathematical Definition of the Lorentz Group	15
1.4.1	The Lorentz Lie Algebra and Its Generators	16
1.4.2	Retrieving Special Lorentz Transformations	18
1.5	Representations of the Lorentz Group	19
1.5.1	The Fundamental Spinor Representation	20
1.5.2	The Two-Valued Homomorphism $SO(1, 3) \simeq SL(2, \mathbb{C})$ in the Four-Dimensional Case	22
1.6	Lorentz Covariant Field Theories and the Little Group	23
1.6.1	Representations of the Massless Little Group in $D = 4$	27
1.7	Noether's Theorem, Noether's Currents and the Stress-Energy Tensor	28
1.8	Criticism of Special Relativity: Opening the Road to General Relativity	31
	References	32
<b>2</b>	<b>Basic Concepts About Manifolds and Fibre Bundles</b>	<b>35</b>
2.1	Introduction	35
2.2	Differentiable Manifolds	36
2.2.1	Homeomorphisms and the Definition of Manifolds	37
2.2.2	Functions on Manifolds	42
2.2.3	Germes of Smooth Functions	43
2.3	Tangent and Cotangent Spaces	44

2.3.1	Tangent Vectors in a Point $p \in \mathcal{M}$	45
2.3.2	Differential Forms in a Point $p \in \mathcal{M}$	49
2.4	Fibre Bundles	51
2.5	Tangent and Cotangent Bundles	58
2.5.1	Sections of a Bundle	60
2.5.2	The Lie Algebra of Vector Fields	62
2.5.3	The Cotangent Bundle and Differential Forms	64
2.5.4	Differential $k$ -Forms	66
2.6	Homotopy, Homology and Cohomology	70
2.6.1	Homotopy	72
2.6.2	Homology	75
2.6.3	Homology and Cohomology Groups: General Construction	81
2.6.4	Relation Between Homotopy and Homology	83
	References	84
<b>3</b>	<b>Connections and Metrics</b>	<b>85</b>
3.1	Introduction	85
3.2	A Historical Outline	86
3.2.1	Gauss Introduces Intrinsic Geometry and Curvilinear Coordinates	87
3.2.2	Bernhard Riemann Introduces $n$ -Dimensional Metric Manifolds	91
3.2.3	Parallel Transport and Connections	94
3.2.4	The Metric Connection and Tensor Calculus from Christoffel to Einstein, via Ricci and Levi Civita	94
3.2.5	Mobiles Frames from Frenet and Serret to Cartan	102
3.3	Connections on Principal Bundles: The Mathematical Definition	108
3.3.1	Mathematical Preliminaries on Lie Groups	108
3.3.2	Ehresmann Connections on a Principle Fibre Bundle	118
3.4	Connections on a Vector Bundle	127
3.5	An Illustrative Example of Fibre-Bundle and Connection	130
3.5.1	The Magnetic Monopole and the Hopf Fibration of $S^3$	130
3.6	Riemannian and Pseudo-Riemannian Metrics: The Mathematical Definition	136
3.6.1	Signatures	137
3.7	The Levi Civita Connection	139
3.7.1	Affine Connections	140
3.7.2	Curvature and Torsion of an Affine Connection	141
3.8	Geodesics	144
3.9	Geodesics in Lorentzian and Riemannian Manifolds: Two Simple Examples	145
3.9.1	The Lorentzian Example of $dS_2$	146
3.9.2	The Riemannian Example of the Lobachevskij-Poincaré Plane	151
	References	154

<b>4</b>	<b>Motion of a Test Particle in the Schwarzschild Metric</b>	157
4.1	Introduction	157
4.2	Keplerian Motions in Newtonian Mechanics	160
4.3	The Orbit Equations of a Massive Particle in Schwarzschild Geometry	162
4.3.1	Extrema of the Effective Potential and Circular Orbits	165
4.4	The Periastron Advance of Planets or Stars	170
4.4.1	Perturbative Treatment of the Periastron Advance	174
4.5	Light-Like Geodesics in the Schwarzschild Metric and the Deflection of Light Rays	179
	References	185
<b>5</b>	<b>Einstein Versus Yang-Mills Field Equations: The Spin Two Graviton and the Spin One Gauge Bosons</b>	187
5.1	Introduction	187
5.2	Locally Inertial Frames and the Vielbein Formalism	189
5.2.1	The Vielbein	192
5.2.2	The Spin-Connection	193
5.2.3	The Poincaré Bundle	194
5.3	The Structure of Classical Electrodynamics and Yang-Mills Theories	195
5.3.1	Hodge Duality	198
5.3.2	Geometrical Rewriting of the Gauge Action	199
5.3.3	Yang-Mills Theory in Vielbein Formalism	200
5.4	Soldering of the Lorentz Bundle to the Tangent Bundle	204
5.4.1	Gravitational Coupling of Spinorial Fields	207
5.5	Einstein Field Equations	209
5.6	The Action of Gravity	211
5.6.1	Torsion Equation	214
5.6.2	The Einstein Equation	217
5.6.3	Conservation of the Stress-Energy Tensor and Symmetries of the Gravitational Action	218
5.6.4	Examples of Stress-Energy-Tensors	219
5.7	Weak Field Limit of Einstein Equations	220
5.7.1	Gauge Fixing	222
5.7.2	The Spin of the Graviton	225
5.8	The Bottom-Up Approach, or Gravity à la Feynmann	227
5.9	Retrieving the Schwarzschild Metric from Einstein Equations	233
	References	236
<b>6</b>	<b>Stellar Equilibrium: Newton's Theory, General Relativity, Quantum Mechanics</b>	237
6.1	Introduction and Historical Outline	237
6.2	The Stress Energy Tensor of a Perfect Fluid	242
6.3	Interior Solutions and the Stellar Equilibrium Equation	245

6.3.1	Integration of the Pressure Equation in the Case of Uniform Density . . . . .	250
6.3.2	The Central Pressure of a Relativistic Star . . . . .	254
6.4	The Chandrasekhar Mass-Limit . . . . .	256
6.4.1	The Degenerate Fermi Gas of Very Many Spin One-Half Particles . . . . .	256
6.4.2	The Equilibrium Equation . . . . .	264
6.4.3	Polytropes and the Chandrasekhar Mass . . . . .	267
6.5	Conclusive Remarks on Stellar Equilibrium . . . . .	270
	References . . . . .	271
<b>7</b>	<b>Gravitational Waves and the Binary Pulsars . . . . .</b>	<b>273</b>
7.1	Introduction . . . . .	273
7.1.1	The Idea of GW Detectors . . . . .	274
7.1.2	The Arecibo Radio Telescope . . . . .	276
7.1.3	The Coalescence of Binaries and the Interferometer Detectors . . . . .	278
7.2	Green Functions . . . . .	280
7.2.1	The Laplace Operator and Potential Theory . . . . .	283
7.2.2	The Relativistic Propagators . . . . .	284
7.3	Emission of Gravitational Waves . . . . .	286
7.3.1	The Stress Energy 3-Form of the Gravitational Field . . . . .	286
7.3.2	Energy and Momentum of a Plane Gravitational Wave . . . . .	288
7.3.3	Multipolar Expansion of the Perturbation . . . . .	291
7.3.4	Energy Loss by Quadrupole Radiation . . . . .	295
7.4	Quadrupole Radiation from the Binary Pulsar System . . . . .	298
7.4.1	Keplerian Parameters of a Binary Star System . . . . .	298
7.4.2	Shrinking of the Orbit and Gravitational Waves . . . . .	301
7.4.3	The Fate of the Binary System . . . . .	306
7.4.4	The Double Pulsar . . . . .	307
7.5	Conclusive Remarks on Gravitational Waves . . . . .	308
	References . . . . .	309
<b>8</b>	<b>Conclusion of Volume 1 . . . . .</b>	<b>311</b>
	Appendix A Spinors and Gamma Matrix Algebra . . . . .	312
	A.1 Introduction to the Spinor Representations of $SO(1, D - 1)$ . . . . .	312
	A.2 The Clifford Algebra . . . . .	312
	A.3 The Charge Conjugation Matrix . . . . .	314
	A.4 Majorana, Weyl and Majorana-Weyl Spinors . . . . .	316
	A.5 A Particularly Useful Basis for $D = 4$ $\gamma$ -Matrices . . . . .	317
	Appendix B Mathematica Packages . . . . .	318
	B.1 Periastrorpack . . . . .	318
	B.2 Metrigravpack . . . . .	324
	<b>Index . . . . .</b>	<b>331</b>
