

Contents

Notation	xi
1 Introduction to the Theory of Controlled Diffusion Processes	1
1. The Statement of Problems—Bellman's Principle—Bellman's Equation	2
2. Examples of the Bellman Equations—The Normed Bellman Equation	7
3. Application of Optimal Control Theory—Techniques for Obtaining Some Estimates	16
4. One-Dimensional Controlled Processes	22
5. Optimal Stopping of a One-Dimensional Controlled Process	35
Notes	42
2 Auxiliary Propositions	45
1. Notation and Definitions	45
2. Estimates of the Distribution of a Stochastic Integral in a Bounded Region	51
3. Estimates of the Distribution of a Stochastic Integral in the Whole Space	61
4. Limit Behavior of Some Functions	67
5. Solutions of Stochastic Integral Equations and Estimates of the Moments	77
6. Existence of a Solution of a Stochastic Equation with Measurable Coefficients	86
7. Some Properties of a Random Process Depending on a Parameter	91
8. The Dependence of Solutions of a Stochastic Equation on a Parameter	102
9. The Markov Property of Solutions of Stochastic Equations	110
10. Ito's Formula with Generalized Derivatives	121
Notes	128
3 General Properties of a Payoff Function	129
1. Basic Results	129
2. Some Preliminary Considerations	140
3. The Proof of Theorems 1.5–1.7	147
	ix

4. The Proof of Theorems 1.8–1.11 for the Optimal Stopping Problem	152
Notes	161
4 The Bellman Equation	163
1. Estimation of First Derivatives of Payoff Functions	165
2. Estimation from Below of Second Derivatives of a Payoff Function	173
3. Estimation from Above of Second Derivatives of a Payoff Function	181
4. Estimation of a Derivative of a Payoff Function with Respect to t	188
5. Passage to the Limit in the Bellman Equation	193
6. The Approximation of Degenerate Controlled Processes by Nondegenerate Ones	200
7. The Bellman Equation	203
Notes	211
5 The Construction of ε -Optimal Strategies	213
1. ε -Optimal Markov Strategies and the Bellman Equation	213
2. ε -Optimal Markov Strategies. The Bellman Equation in the Presence of Degeneracy	218
3. The Payoff Function and Solution of the Bellman Equation: The Uniqueness of the Solution of the Bellman Equation	228
Notes	243
6 Controlled Processes with Unbounded Coefficients: The Normed Bellman Equation	245
1. Generalizations of the Results Obtained in Section 3.1	245
2. General Methods for Estimating Derivatives of Payoff Functions	254
3. The Normed Bellman Equation	266
4. The Optimal Stopping of a Controlled Process on an Infinite Interval of Time	275
5. Control on an Infinite Interval of Time	285
Notes	291
Appendices	
1. Some Properties of Stochastic Integrals	293
2. Some Properties of Submartingales	299
Bibliography	303
Index	307
