

	Introductory material	
1	Electrical resistivity of pure metals and dilute alloys (J. BASS)	1
1.1	Introduction	1
1.1.1	General remarks	1
1.1.2	List of frequently used symbols and abbreviations	3
1.2	Pure metals	5
1.2.1	Pure metal resistivities at $T = 273.2$ K	5
1.2.2	Pure metal resistivities from $T = 10 - 15$ K till melting point	13
1.2.3	References for 1.2.1 and 1.2.2	92
1.2.4	Pure metal resistivities at low temperatures	99
1.2.5	References for 1.2.4	137
1.3	Size effects	139
1.3.1	Size effects in pure metals	140
1.3.2	Size dependent deviations from Matthiessen's rule	156
1.3.3	References for 1.3.1 and 1.3.2	163
1.4	Dilute alloys	166
1.4.1	Resistivity/atomic percent impurity in dilute alloys	166
	Additional data to section 1.4.1 (See Vol. 15B)	
1.4.2	Application of modified Linde's law	253
1.4.3	Deviation from Matthiessen's rule (DMR)	258
1.4.4	References for 1.4.1 - 1.4.3	279
1.5	Bloch-Grüneisen resistivity function	287
1.6	Pressure effects (See Vol. 15B)	
2	Kondo and spin fluctuation systems, spin glasses (K.H. FISCHER)	289
2.1	Introduction	289
2.1.1	Kondo and spin fluctuation systems	289
2.1.1.1	General remarks	289
2.1.1.2	Definition of Kondo temperature	290
2.1.1.3	Spin fluctuation systems	291
2.1.2	Spin glasses	291
2.1.3	List of frequently used symbols and abbreviations	293
2.2	Data	294
2.2.1	Kondo and spin fluctuation systems	294
2.2.2	Spin glasses	334
2.3	References for 2.1 and 2.2	376
3	Thermopower of pure metals and dilute alloys	385
3.1 - 3.5, 3.8	See Vol. 15B	
3.6	Size dependence of thermopower (J. BASS)	385
3.7	References for 3.6	396

Electrical Resistivity, Kondo and Spin Fluctuation
Systems, Spin Glasses and Thermopower

Hellwege, K.-H.; Olsen, J.L. (Eds.)

1983, 396 p., Hardcover

ISBN: 978-3-540-11082-8
