

	Introductory material	
1	Electrical resistivity of pure metals and dilute alloys	1
1.1 - 1.5	See Vol. 15A	
1.4	Additional data to section 1.4.1 Resistivity/atomic percent impurity in dilute alloys (J. BASS)	1
1.6	Pressure effects: Pressure dependence of the electrical resistance of pure crystalline metals (J.S. DUGDALE, A. MYERS)	13
1.6.1	Introduction	13
1.6.2	List of frequently used symbols and abbreviations	15
1.6.3	Data	16
2	Kondo and spin fluctuation systems, spin glasses (See Vol. 15A)	
3	Thermopower of pure metals and dilute alloys	48
3.1	Introduction for pure metals (C.L. FOILES)	48
3.2	Thermopower of pure metals near room temperature (C.L. FOILES)	50
3.3	Temperature dependence of the thermopower of pure metals (C.L. FOILES)	51
3.4	Thermopower at low temperatures (C.L. FOILES)	100
3.5	References for 3.1 - 3.4	102
3.6-3.7	Size dependence of thermopower (See Vol. 15A)	
3.8	Pressure coefficients of the thermopower of metallic elements (J.S. DUGDALE, A. MYERS)	105
3.8.1	Introduction	105
3.8.2	List of frequently used symbols and abbreviations	105
3.8.3	Data	106
3.10	Thermopower of dilute alloys (C.L. FOILES)	123
3.10.1	Introduction	123
3.10.2	List of frequently used symbols and abbreviations	124
3.10.3	Data	124
4	Optical properties of pure metals and binary alloys (C.L. FOILES)	210
4.1	Introduction for pure metals	210
4.2	Drude parameters of pure metals	212
4.3	Optical constants of pure metals	222
4.4	References for 4.1 - 4.3	372
4.5	Introduction for binary alloys	376
4.6	Drude parameters of binary alloys	377
4.7	Optical constants of binary alloys	382

Electrical Resistivity, Thermoelectrical Power and
Optical Properties

Hellwege, K.-H.; Olsen, J.L. (Eds.)

1985, IX, 490 p., Hardcover

ISBN: 978-3-540-11694-3
