

Landolt-Börnstein
Group II: Molecules and Radicals

Volume 16
Diamagnetic Susceptibility

	Title Page, Preface	
1	Introduction	1
1.1	General remarks	1
1.2	Theoretical calculation methods	3
1.3	References for 1.1 and 1.2	10
1.4	Arrangement of the tables	11
1.5	Units and conversion factors	12
1.6	List of symbols	12
2	Diamagnetic bulk susceptibility of organic compounds	14
2.1	Data	14
2.1.1	Aliphatic compounds	14
2.1.2	Aromatic compounds	92
2.1.3	Heterocyclic compounds	194
2.1.4	Amino acids	227
2.1.5	Carbohydrates and related compounds	230
2.1.6	Steroids	232
2.1.7	Terpenes and related compounds	233
2.1.8	Charge transfer complexes and picrates	236
2.1.9	Oils	240
2.1.10	Paraffins	240
2.1.11	Polyethylenes	241
2.2	Index of substances to 2.1	241
2.3	References for 2.1	255
3	Diamagnetic bulk susceptibility of inorganic and organometallic compounds	265
4	Diamagnetic bulk susceptibility of mixtures	386
5	Diamagnetic susceptibility of the methylene group in various compounds	399
6	Diamagnetic susceptibility contributions of carbonyl ion, amino ion, nitro ion, and silicon ion	400
7	Diamagnetic susceptibility of diamagnetic and paramagnetic ions	402
8	Diamagnetic anisotropy of organic crystals and molecules	403
9	Diamagnetic anisotropy of inorganic and organometallic crystals und molecules	445

Diamagnetic Susceptibility / Diamagnetische
Suszeptibilität

Gupta, R.R. - Hellwege, K.-H.; Hellwege, A.M. (Eds.)

1986, VII, 457 p. 18 illus., Hardcover
