Preface

xi

Chapter I

Introduction and Motivation

1.1 Quantization	1
1.2 Schrödinger Equation	2
1.3 Quantum Mechanics and Diffusion Processes	4
1.4 Equivalence of Schrödinger and Diffusion Equations	6
1.5 Time Reversal and Duality	7
1.6 QED and Quantum Field Theory	9
1.7 What is the Schrödinger Equation ?	10
1.8 Mathematical Contents	12

Chapter II

Diffusion Processes and their Transformations

2.1 Time-Homogeneous Diffusion Processes	13
2.2 Time-Inhomogeneous Diffusion Processes	17
2.3 Brownian Motions	19
2.4 Stochastic Differential Equations	21
2.5 Transformation by a Multiplicative Functional	27
2.6 Feynman-Kac Formula	31
2.7 Kac's Semi-Group and its Renormalization	33
2.8 Time Change	37
2.9 Dirichlet Problem	40
2.10 Feller's One-Dimensional Diffusion Processes	42
2.11 Feller's Test	46

Chapter III

Duality and Time Reversal of Diffusion Processes

3.1 Kolmogoroff's Duality	55
3.2 Time Reversal of Diffusion Processes	63
3.3 Duality of Time-Inhomogeneous Diffusion Processes	69
3.4 Schrödinger's and Kolmogoroff's Representations	75
3.5 Some Remarks	86

Chapter IV

Equivalence of Diffusion and Schrödinger Equations

4.1 Change of Variables Formulae	89
4.2 Equivalence Theorem	94
4.3 Discussion of the Non-Linear Dependence	96
4.4 A Solution to Schrödinger's Conjecture	100
4.5 A Unified Theory	101
4.6 On Quantization	104
4.7 As a Diffusion Theory	107
4.8 Principle of Superposition	108
4.9 Remarks	114

Chapter V

Variational Principle

5.1 Problem Setting in the p -Representation	115
5.2 Csiszar's Projection Theorem	118
5.3 Reference Processes	119
5.4 Diffusion Processes in Schrödinger's Representation	125
5.5 Weak Fundamental Solutions	131
5.6 An Entropy Characterization of the Markov Property	132
5.7 Remarks	135

Chapter VI

Diffusion Processes in q -Representation

6.1 A Multiplicative Functional	139
6.2 Flows of Distribution Densities	146
6.3 Discussions on the q -Representation	149
6.4 What is the Feynman Integral ?	152
6.5 A Remark on Kac's Semi-Group	156
6.6 A Typical Case	159
6.7 Hydrogen Atom	160
6.8 A Remark on $\{\mu_a, \mu_b\}$	161

Chapter VII

Segregation of a Population

7.1 Introduction	163
7.2 Harmonic Oscillator	164
7.3 Segregation of a Finite-System of Particles	166
7.4 A Formulation of the Propagation of Chaos	170
7.5 The Propagation of Chaos	171
7.6 Skorokhod's Problem with Singular Drift	174
7.7 A Limit Theorem	185
7.8 A Proof of Theorem 7.1	195
7.9 Schrödinger Equations with Singular Potentials	198

Chapter VIII

The Schrödinger Equation can be a Boltzmann Equation

8.1 Large Deviations	207
8.2 The Propagation of Chaos in Terms of Large Deviations	215
8.3 Statistical Mechanics for Schrödinger Equations	219
8.4 Some Comments	221

Chapter IX

Applications of the Statistical Model for Schrödinger Equations

9.1 Segregation of a Monkey Population	223
9.2 An Eigenvalue Problem	226
9.3 Septation of <i>Escherichia Coli</i>	227
9.4 The Mass Spectrum of Mesons	233
9.5 Titius-Bode Law	238

Chapter X

Relative Entropy and Csiszar's Projection

10.1 Relative Entropy	239
10.2 Csiszar's Projection	243
10.3 Exponential Families and Marginal Distributions	246

Chapter XI

Large Deviations

11.1 Lemmas	253
11.2 Large Deviations of Empirical Distributions	255

Chapter XII

Non-Linearity Induced by the Branching Property

12.1 Branching Property	261
12.2 Non-Linear Equations of Branching Processes	265
12.3 Quasi-Linear Parabolic Equations	268
12.4 Branching Markov Processes with Non-Linear Drift	272
12.5 Revival of a Markov Process	273
12.6 Construction of Branching Markov Processes	276

Appendix:

a.1 Fényes' "Equation of Motion" of Probability Densities	281
a.2 Stochastic Mechanics	283
a.3 Segregation of a Population	287
a.4 Euclidean Quantum Mechanics	288
a.5 Remarks	290
a.6 Bohmian Mechanics	291
