

CONTENTS

Chapter 1. Smash products of spectra

1.1. Basic definitions	2
1.2. Partial spectra	7
1.3. Bispectra	17
1.4. n -fold spectra	25

Chapter 2. Abstract homotopy theory of n -fold spectra

2.1. Closed model category structures for n -fold spectra	31
2.2. Equivalence of homotopy categories	49
2.3. Simplicial presheaves and presheaves of spectra	51
2.4. Presheaves of n -fold spectra	57
2.5. Smash products of presheaves of spectra	64

Chapter 3. First applications

3.1. Function spectra	68
3.2. The abstract norm	83

Chapter 4. Auxilliary results

4.1. Fibres and cofibres	92
4.2. Boundary maps	96
4.3. Simplicial spectra	100
4.4. The Kan suspension	105
4.5. Simplicial abelian group spectra	115
4.6. Stable Dold-Kan theory	127
4.7. Postnikov towers	132

Chapter 5. K -theory presheaves

5.1. The K -theory presheaf of spectra and its deloopings	145
5.2. Products	155
5.3. The algebraic K -theory product	173
5.4. K -theory transfer	180
5.5. Join transformations	187

Chapter 6. Generalized étale cohomology

6.1. The descent spectral sequence	198
6.2. The classifying topos	204
6.3. Ordinary Galois cohomology	212
6.4. Generalized Čech cohomology	218
6.5. Continuity	231

Chapter 7. Bott periodic K -theory

7.1. The Tate theorem 242

7.2. Calculations in low degrees 251

7.3. Inductors 258

7.4. Descent for Bott periodic K -theory of fields 263

7.5. Arbitrary powers and regular schemes 275

7.6. The Nisnevich topology 282

7.7. Post Script: The Lichtenbaum-Quillen conjecture 306
