

Table of Contents

Reader Guidelines	1
1 Risk Theory	21
1.1 The Ruin Problem	22
1.2 The Cramér–Lundberg Estimate	28
1.3 Ruin Theory for Heavy–Tailed Distributions	36
1.3.1 Some Preliminary Results	37
1.3.2 Cramér–Lundberg Theory for Subexponential Distributions	39
1.3.3 The Total Claim Amount in the Subexponential Case .	44
1.4 Cramér–Lundberg Theory for Large Claims: a Discussion . . .	49
1.4.1 Some Related Classes of Heavy–Tailed Distributions . .	49
1.4.2 The Heavy–Tailed Cramér–Lundberg Case Revisited . .	53
2 Fluctuations of Sums	59
2.1 The Laws of Large Numbers	60
2.2 The Central Limit Problem	70
2.3 Refinements of the CLT	82
2.4 The Functional CLT: Brownian Motion Appears	88
2.5 Random Sums	96
2.5.1 General Randomly Indexed Sequences	96
2.5.2 Renewal Counting Processes	103
2.5.3 Random Sums Driven by Renewal Counting Processes	106
3 Fluctuations of Maxima	113
3.1 Limit Probabilities for Maxima	114
3.2 Weak Convergence of Maxima Under Affine Transformations .	120
3.3 Maximum Domains of Attraction and Norming Constants . .	128
3.3.1 The Maximum Domain of Attraction of the Fréchet Distribution $\Phi_\alpha(x) = \exp\{-x^{-\alpha}\}$	130

3.3.2	The Maximum Domain of Attraction of the Weibull Distribution $\Psi_\alpha(x) = \exp\{-(-x)^\alpha\}$	134
3.3.3	The Maximum Domain of Attraction of the Gumbel Distribution $\Lambda(x) = \exp\{-\exp\{-x\}\}$	138
3.4	The Generalised Extreme Value Distribution and the Generalised Pareto Distribution	152
3.5	Almost Sure Behaviour of Maxima	168
4	Fluctuations of Upper Order Statistics	181
4.1	Order Statistics	182
4.2	The Limit Distribution of Upper Order Statistics	196
4.3	The Limit Distribution of Randomly Indexed Upper Order Statistics	204
4.4	Some Extreme Value Theory for Stationary Sequences	209
5	An Approach to Extremes via Point Processes	219
5.1	Basic Facts About Point Processes	220
5.1.1	Definition and Examples	220
5.1.2	Distribution and Laplace Functional	225
5.1.3	Poisson Random Measures	226
5.2	Weak Convergence of Point Processes	232
5.3	Point Processes of Exceedances	237
5.3.1	The IID Case	238
5.3.2	The Stationary Case	242
5.4	Applications of Point Process Methods to IID Sequences	247
5.4.1	Records and Record Times	248
5.4.2	Embedding Maxima in Extremal Processes	250
5.4.3	The Frequency of Records and the Growth of Record Times	254
5.4.4	Invariance Principle for Maxima	260
5.5	Some Extreme Value Theory for Linear Processes	263
5.5.1	Noise in the Maximum Domain of Attraction of the Fréchet Distribution Φ_α	264
5.5.2	Subexponential Noise in the Maximum Domain of Attraction of the Gumbel Distribution Λ	277
6	Statistical Methods for Extremal Events	283
6.1	Introduction	283
6.2	Exploratory Data Analysis for Extremes	290
6.2.1	Probability and Quantile Plots	290
6.2.2	The Mean Excess Function	294

6.2.3	Gumbel's Method of Exceedances	303
6.2.4	The Return Period	305
6.2.5	Records as an Exploratory Tool	307
6.2.6	The Ratio of Maximum and Sum	309
6.3	Parameter Estimation for the Generalised Extreme Value Distribution	316
6.3.1	Maximum Likelihood Estimation	317
6.3.2	Method of Probability-Weighted Moments	321
6.3.3	Tail and Quantile Estimation, a First Go	323
6.4	Estimating Under Maximum Domain of Attraction Conditions	325
6.4.1	Introduction	325
6.4.2	Estimating the Shape Parameter ξ	327
6.4.3	Estimating the Norming Constants	345
6.4.4	Tail and Quantile Estimation	348
6.5	Fitting Excesses Over a Threshold	352
6.5.1	Fitting the GPD	352
6.5.2	An Application to Real Data	358
7	Time Series Analysis for Heavy-Tailed Processes	371
7.1	A Short Introduction to Classical Time Series Analysis	372
7.2	Heavy-Tailed Time Series	378
7.3	Estimation of the Autocorrelation Function	381
7.4	Estimation of the Power Transfer Function	386
7.5	Parameter Estimation for ARMA Processes	393
7.6	Some Remarks About Non-Linear Heavy-Tailed Models	403
8	Special Topics	413
8.1	The Extremal Index	413
8.1.1	Definition and Elementary Properties	413
8.1.2	Interpretation and Estimation of the Extremal Index	418
8.1.3	Estimating the Extremal Index from Data	424
8.2	A Large Claim Index	430
8.2.1	The Problem	430
8.2.2	The Index	431
8.2.3	Some Examples	433
8.2.4	On Sums and Extremes	436
8.3	When and How Ruin Occurs	439
8.3.1	Introduction	439
8.3.2	The Cramér-Lundberg Case	444
8.3.3	The Large Claim Case	449

8.4	Perpetuities and ARCH Processes	454
8.4.1	Stochastic Recurrence Equations and Perpetuities	455
8.4.2	Basic Properties of ARCH Processes	461
8.4.3	Extremes of ARCH Processes	473
8.5	On the Longest Success–Run	481
8.5.1	The Total Variation Distance to a Poisson Distribution	483
8.5.2	The Almost Sure Behaviour	486
8.5.3	The Distributional Behaviour	493
8.6	Some Results on Large Deviations	498
8.7	Reinsurance Treaties	503
8.7.1	Introduction	503
8.7.2	Probabilistic Analysis	507
8.8	Stable Processes	521
8.8.1	Stable Random Vectors	522
8.8.2	Symmetric Stable Processes	526
8.8.3	Stable Integrals	527
8.8.4	Examples	532
8.9	Self–Similarity	541
Appendix		551
A1	Modes of Convergence	551
A1.1	Convergence in Distribution	551
A1.2	Convergence in Probability	552
A1.3	Almost Sure Convergence	553
A1.4	L^p –Convergence	553
A1.5	Convergence to Types	554
A1.6	Convergence of Generalised Inverse Functions	554
A2	Weak Convergence in Metric Spaces	555
A2.1	Preliminaries about Stochastic Processes	555
A2.2	The Spaces $\mathbb{C}[0, 1]$ and $\mathbb{D}[0, 1]$	557
A2.3	The Skorokhod Space $\mathbb{D}(0, \infty)$	559
A2.4	Weak Convergence	559
A2.5	The Continuous Mapping Theorem	561
A2.6	Weak Convergence of Point Processes	562
A3	Regular Variation and Subexponentiality	564
A3.1	Basic Results on Regular Variation	564
A3.2	Properties of Subexponential Distributions	571
A3.3	The Tail Behaviour of Weighted Sums of Heavy–Tailed Random Variables	583
A4	Some Renewal Theory	587
