

Contents

1. Naïve set theory	1
1.1 Handle with care	2
1.2 Basic definitions	4
1.3 Cartesian products, relations and functions	7
1.4 Equivalence and order	11
1.5 Bijections	15
1.6 Finite sets	20
1.7 Countable sets	24
1.8 The number systems	28
1.9 Shoes and socks	31
2. Ordinal numbers	37
2.1 Well-order and induction	38
2.2 The ordinals	39
2.3 The hierarchy of sets	47
2.4 Ordinal arithmetic	49
3. Logic	55
3.1 Formal logic	56
3.2 Propositional logic	58
3.3 Soundness and completeness	64
3.4 Boolean algebra	69

4. First-order logic	79
4.1 Language and syntax	80
4.2 Semantics	83
4.3 Deduction	85
4.4 Soundness and completeness	88
5. Model theory	95
5.1 Compactness and Löwenheim–Skolem	95
5.2 Categoricity	98
5.3 Peano arithmetic	101
5.4 Consistency	109
6. Axiomatic set theory	113
6.1 Axioms for set theory	114
6.2 The Axiom of Choice	118
6.3 Cardinals	124
6.4 Inaccessibility	130
6.5 Alternative set theories	133
6.6 The Skolem Paradox	134
6.7 Classes	136
7. Categories	141
7.1 Categories	143
7.2 Foundations	146
7.3 Functors	148
7.4 Natural transformations	150
8. Where to from here?	155
8.1 Philosophy of mathematics	155
8.2 Further reading	158
Solutions to selected exercises	161
References	175
Index	177
