

CONTENTS

1 Introduction	1
§1 Historical Remarks	1
§2 Background Material	4
§3 h -Principles	10
§4 The Approximation Problem	16
2 Convex Hulls	19
§1 Contractible Spaces of Surrounding Loops	19
§2 C -Structures for Relations in Affine Bundles	22
§3 The Integral Representation Theorem	28
3 Analytic Theory	33
§1 The One-Dimensional Theorem	33
§2 The C^\perp -Approximation Theorem	45
4 Open Ample Relations in 1-Jet Spaces	49
§1 C^0 -Dense h -Principle	50
§2 Examples	62
5 Microfibrations	71
§1 Introduction	71
§2 C -Structures for Relations over Affine Bundles	78
§3 The C^\perp -Approximation Theorem	83
6 The Geometry of Jet spaces	87
§1 The Manifold X^\perp	87
§2 Principal Decompositions in Jet Spaces	91

7 Convex Hull Extensions	101
§1 The Microfibration Property	101
§2 The h -Stability Theorem	104
8 Ample Relations	121
§1 Short Sections	121
§2 h -Principle for Ample Relations	132
§3 Examples	145
§4 Relative h -Principles	152
9 Systems of Partial Differential Equations	165
§1 Underdetermined Systems	165
§2 Triangular Systems	178
§3 C^1 -Isometric Immersions	194
10 Relaxation Theorem	201
§1 Filippov's Relaxation Theorem	201
§2 C^r -Relaxation Theorem	204
References	207
Index	211
Index of Notation	213

Convex Integration Theory

Solutions to the h-principle in geometry and topology

Spring, D.

1998, VIII, 213 p., Softcover

ISBN: 978-3-0348-0059-4

A product of Birkhäuser Basel
