

Table of Contents

1. Audio System for Technical Readings	1
1.1 Motivation	2
1.2 What is <code>AS_TER</code> ?	3
1.3 Rendering Documents	4
1.4 Extending <code>AS_TER</code>	6
1.5 Producing Different Audio Views	7
1.6 Using the Full Power of <code>AS_TER</code>	8
2. Recognizing High-Level Document Structure	13
2.1 Document models	13
2.2 Representing Mathematical Content	16
2.3 Constructing High-Level Representations	21
2.3.1 Lexical Analysis and Recognition	21
2.3.2 Constructing the Quasi-Prefix Form	22
2.4 Macros Introduce New Object Types	24
2.4.1 How <i>define-text-object</i> Works	27
2.4.2 Rendering Instances of User-Defined Macros	28
2.5 Unambiguous Document Encodings	29
3. AFL: Audio Formatting Language	33
3.1 Overview	33
3.2 The Speech Component	34
3.3 Combining Different Spaces in AFL	40
3.4 Audio Formatting using Non-Speech Audio	43
3.5 The Pronunciation Component	47
3.6 Some Concluding Remarks on AFL	47
4. Rendering Rules and Styles	51
4.1 Rendering Rules and Styles	51
4.2 Rendering Document Content	54
4.3 Rendering Mathematics	57
4.4 Processing the Quasi-Prefix Form	64
4.5 Descriptive Renderings	65
4.6 Variable Substitution	68

4.7	Floating Objects	74
5.	Browsing Audio Documents	77
5.1	Introduction	77
5.2	How Does Browsing Work?	78
5.3	Traversing High-Level Document Structure	80
5.4	Rendering the Current Selection	83
5.5	Cross-References and Bookmarks	85
6.	Related Work	87
6.1	Electronic Documents	87
6.2	Summary of Work in Audio Interfaces	91
A.	Documentation	95
A.1	Setting Up AS _{TE} R	95
A.2	The Recognizer	96
A.3	AFL	97
A.3.1	The Total Audio Space	97
A.3.2	The Speech Component	98
A.3.3	The Non-Speech Audio Component	101
A.4	Rendering Information Structure	103
A.4.1	Processing the Quasi-Prefix Form	103
A.4.2	Rendering Rules and Styles	103
A.5	The Browser	105
A.6	Some CLOS Terminology	108
B.	Accessibility	111
