|                                                                                                                                                                                                       |     |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| Expressing Irregular Computations in Modern Fortran Dialects .....                                                                                                                                    | 1   |
| <i>Jan F. Prins, Siddhartha Chatterjee, and Martin Simons</i>                                                                                                                                         |     |
| Memory System Support for Irregular Applications .....                                                                                                                                                | 17  |
| <i>John Carter, Wilson Hsieh, Mark Swanson, Lixin Zhang, Erik Brunvand,<br/>Al Davis, Chen-Chi Kuo, Ravindra Kuramkote, Michael Parker,<br/>Lambert Schaelicke, Leigh Stoller, and Terry Tateyama</i> |     |
| MENHIR: An Environment for High Performance Matlab .....                                                                                                                                              | 27  |
| <i>Stéphane Chauveau and Francois Bodin</i>                                                                                                                                                           |     |
| On the Automatic Parallelization of Sparse and Irregular<br>Fortran Programs .....                                                                                                                    | 41  |
| <i>Yuan Lin and David Padua</i>                                                                                                                                                                       |     |
| Loop Transformations for Hierarchical Parallelism and Locality .....                                                                                                                                  | 57  |
| <i>Vivek Sarkar</i>                                                                                                                                                                                   |     |
| Dataflow Analysis Driven Dynamic Data Partitioning .....                                                                                                                                              | 75  |
| <i>Jodi Tims, Rajiv Gupta, and Mary Lou Soffa</i>                                                                                                                                                     |     |
| A Case for Combining Compile-Time and Run-Time Parallelization .....                                                                                                                                  | 91  |
| <i>Sungdo Moon, Byoungro So, Mary W. Hall, and Brian Murphy</i>                                                                                                                                       |     |
| Compiler and Run-Time Support for Adaptive Load Balancing in<br>Software Distributed Shared Memory Systems .....                                                                                      | 107 |
| <i>Sotiris Ioannidis and Sandhya Dwarkadas</i>                                                                                                                                                        |     |
| Efficient Interprocedural Data Placement Optimisation in a<br>Parallel Library .....                                                                                                                  | 123 |
| <i>Olav Beckmann and Paul H. J. Kelly</i>                                                                                                                                                             |     |
| A Framework for Specializing Threads in Concurrent Run-Time Systems ..                                                                                                                                | 139 |
| <i>Gregory D. Benson and Ronald A. Olsson</i>                                                                                                                                                         |     |
| Load Balancing with Migrant Lightweight Threads .....                                                                                                                                                 | 153 |
| <i>David Cronk and Piyush Mehrotra</i>                                                                                                                                                                |     |
| Integrated Task and Data Parallel Support for Dynamic Applications .....                                                                                                                              | 167 |
| <i>James M. Rehg, Kathleen Knobe, Umakishore Ramachandran,<br/>Rishiyur S. Nikhil, and Arun Chauhan</i>                                                                                               |     |
| Supporting Self-Adaptivity for SPMD Message-Passing Applications .....                                                                                                                                | 181 |
| <i>M. Cermele, M. Colajanni, and S. Tucci</i>                                                                                                                                                         |     |
| Evaluating the Effectiveness of a Parallelizing Compiler .....                                                                                                                                        | 195 |
| <i>Dixie Hisley, Gagan Agrawal and Lori Pollock</i>                                                                                                                                                   |     |

|                                                                                                                                          |     |
|------------------------------------------------------------------------------------------------------------------------------------------|-----|
| Comparing Reference Counting and Global Mark-and-Sweep<br>on Parallel Computers .....                                                    | 205 |
| <i>Hirotaaka Yamamoto, Kenjiro Taura, and Akinori Yonezawa</i>                                                                           |     |
| Design of the GODIVA Performance Measurement System .....                                                                                | 219 |
| <i>Terrence W. Pratt</i>                                                                                                                 |     |
| Instrumentation Database for Performance Analysis of Parallel<br>Scientific Applications .....                                           | 229 |
| <i>Jeffrey Nesheiwat and Boleslaw K. Szymanski</i>                                                                                       |     |
| A Performance Prediction Framework for Data Intensive Applications<br>on Large Scale Parallel Machines .....                             | 243 |
| <i>Mustafa Uysal, Tahsin M. Kurc, Alan Sussman, and Joel Saltz</i>                                                                       |     |
| MARS: A Distributed Memory Approach to Shared Memory Compilatio . .                                                                      | 259 |
| <i>M.F.P. O'Boyle</i>                                                                                                                    |     |
| More on Scheduling Block-Cyclic Array Redistribution .....                                                                               | 275 |
| <i>Frédéric Desprez, Stéphane Domas, Jack Dongarra, Antoine Petitet,<br/>Cyril Randriamaro, and Yves Robert</i>                          |     |
| Flexible and Optimized IDL Compilation for Distributed Applications ....                                                                 | 288 |
| <i>Eric Eide, Jay Lepreau, and James L. Simister</i>                                                                                     |     |
| QoS Aspect Languages and Their Runtime Integration .....                                                                                 | 303 |
