

# Table of Contents

|  |    |
|--|----|
| <b>1. Introduction</b>   | 1  |
| <b>2. Quantum-mechanical few-body problems</b>                                   | 7  |
| 2.1 Hamiltonian  | 7  |
| 2.2 Relative coordinates   | 9  |
| 2.3 Symmetrization   | 15 |
| 2.4 Permutation of the Jacobi coordinates  | 16 |
| Complements  | 18 |
| C2.1 An $N$ -particle Hamiltonian<br>in the heavy-particle center coordinate set | 18 |
| C2.2 Canonical Jacobi coordinates  | 19 |
| <b>3. Introduction to variational methods</b>                                    | 21 |
| 3.1 Variational principles   | 21 |
| 3.2 The variance of local energy   | 30 |
| 3.3 The virial theorem   | 33 |
| <b>4. Stochastic variational method</b>  | 39 |
| 4.1 Basis optimization   | 39 |
| 4.2 A practical example  | 43 |
| 4.2.1 Geometric progression  | 44 |
| 4.2.2 Random tempering   | 47 |
| 4.2.3 Random basis   | 47 |
| 4.2.4 Sorting  | 50 |
| 4.2.5 Trial and error search   | 50 |
| 4.2.6 Refining   | 53 |
| 4.2.7 Comparison of different optimizing strategies                              | 54 |
| 4.3 Optimization for excited states  | 56 |
| Complements  | 61 |

## XII Table of Contents

|  |            |
|--|------------|
| C4.1 Minimization of energy versus variance.....             | 61         |
| <b>5. Other methods to solve few-body problems .....</b>     | <b>65</b>  |
| 5.1 Quantum Monte Carlo method:                              |            |
| The imaginary-time evolution of a system .....               | 65         |
| 5.2 Hyperspherical harmonics expansion method.....           | 67         |
| 5.3 Faddeev method.....                                      | 70         |
| 5.4 The generator coordinate method.....                     | 72         |
| <b>6. Variational trial functions .....</b>                  | <b>75</b>  |
| 6.1 Correlated Gaussians                                     |            |
| and correlated Gaussian-type geminals .....                  | 75         |
| 6.2 Orbital functions with arbitrary angular momentum ..     | 82         |
| 6.3 Generating function .....                                | 87         |
| 6.4 The spin function .....                                  | 94         |
| Complements.....   | 96         |
| C6.1 Nodeless harmonic-oscillator functions as a basis ..... | 96         |
| C6.2 Solid spherical harmonics.....                          | 105        |
| C6.3 Angular momentum recoupling.....                        | 106        |
| C6.4 Separation of the center-of-mass motion                 |            |
| from correlated Gaussians .....                              | 112        |
| C6.5 Three electrons with $S = 1/2$ .....                    | 115        |
| C6.6 Four electrons in an arbitrary spin arrangement .....   | 115        |
| C6.7 Six electrons with $S = 0$ .....                        | 116        |
| Exercises .....  | 118        |
| <b>7. Matrix elements for spherical Gaussians .....</b>      | <b>123</b> |
| 7.1 Matrix elements of the generating function .....         | 123        |
| 7.2 Correlated Gaussians .....                               | 125        |
| 7.3 Correlated Gaussians in two-dimensional systems .....    | 129        |
| 7.4 Correlated Gaussian-type geminals .....                  | 131        |
| 7.5 Nonlocal potentials .....                                | 134        |
| 7.6 Semirelativistic kinetic energy.....                     | 137        |
| Complements.....   | 143        |
| C7.1 Sherman-Morrison formula .....                          | 143        |
| Exercises .....  | 145        |

|   |     |
|---|-----|
| <b>8. Small atoms and molecules</b>                             | 149 |
| 8.1 Coulombic systems   | 149 |
| 8.2 Coulombic three-body systems                                | 150 |
| 8.3 Four or more particles                                      | 154 |
| 8.4 Small molecules   | 165 |
| Complements   | 167 |
| C8.1 The cusp condition for the Coulomb potential               | 167 |
| C8.2 The chemical bond: The $H_2^+$ ion                         | 169 |
| C8.3 Stability of hydrogen-like molecules                       | 171 |
| C8.4 Application of global vectors to muonic molecules          | 174 |
| <b>9. Baryon spectroscopy</b>                                   | 177 |
| 9.1 The trial function in the constituent quark model           | 178 |
| 9.2 One-gluon exchange model                                    | 178 |
| 9.3 Meson-exchange model  | 181 |
| <b>10. Few-body problems in solid state physics</b>             | 187 |
| 10.1 Excitonic complexes  | 188 |
| 10.2 Quantum dots   | 191 |
| 10.3 Quantum dots in magnetic field                             | 196 |
| 10.4 Quantum dots in the generator coordinate method            | 202 |
| Complements   | 204 |
| C10.1 Two-dimensional electron motion in a magnetic field       | 204 |
| <b>11. Nuclear few-body systems</b>                             | 213 |
| 11.1 Introductory remark on nucleon-nucleon potentials          | 213 |
| 11.2 Few-nucleon systems with central forces                    | 216 |
| 11.3 Realistic potentials                                       | 223 |
| Complements   | 230 |
| C11.1 Correlations in few-nucleon systems                       | 230 |
| C11.2 Convergence of partial-wave expansions                    | 233 |
| C11.3 Quark Pauli effect in $s$ -shell $A$ hypernuclei          | 239 |
| C11.4 The $^{12}C$ nucleus as a system of three alpha-particles | 242 |
| <b>Appendix</b>   | 247 |
| <b>Matrix elements for general Gaussians</b>                    | 247 |
| A.1 Correlated Gaussians  | 247 |
| A.1.1 Overlap of the basis functions                            | 247 |
| A.1.2 Kinetic energy  | 249 |

## XIV Table of Contents

|   |     |
|---|-----|
| A.1.3 Two-body interactions .....   | 250 |
| A.1.4 Density multipole operators.....  | 256 |
| A.2 Correlated Gaussians with different coordinate sets ...                                   | 257 |
| A.3 Correlated Gaussian-type geminals .....   | 262 |
| A.4 Spin matrix elements .....  | 263 |
| A.5 Three-body problem with central, tensor<br>and spin-orbit forces .....                    | 265 |
| Complements.....  | 280 |
| CA.1 Matrix elements of central potentials .....  | 280 |
| CA.2 Matrix elements of density multipoles .....  | 283 |
| CA.3 Overlap matrix elements of the correlated Gaussians<br>for a three-particle system ..... | 285 |
| Exercises .....   | 288 |
| References .....  | 299 |
| Index .....   | 307 |

Stochastic Variational Approach to  
Quantum-Mechanical Few-Body Problems

Suzuki, Y.; Varga, K.

1998, XIV, 314 p. 14 illus., 11 illus. in color., Hardcover

ISBN: 978-3-540-65152-9
