Invited Lectures

On the Aesthetics of Diagrams	1
<i>David Harel</i>	
Generalising monads	6
<i>John Hughes</i>	
A proof rule for control loops	7
<i>Burghard von Karger</i>	

Contributed Lectures

Relation-algebraic derivation of spanning tree algorithms	23
<i>Rudolf Berghammer, Burghard von Karger, Andreas Wolf</i>	
An application of program derivation techniques to 18th-century mathematics	44
<i>A. Bijlsma</i>	
Nested datatypes	52
<i>Richard Bird, Lambert Meertens</i>	
An approach to object-orientation in action systems	68
<i>Marcello M. Bosangue, Joost N. Kok, Kaisa Sere</i>	
Layered graph traversals and Hamiltonian path problems – An algebraic approach	96
<i>Thomas Brunn, Bernhard Möller, Martin Rusling</i>	
A unifying framework for correct program construction	122
<i>Henning Dierks, Michael Schenke</i>	
Computation calculus – Bridging a formalization gap	151
<i>Rutger M. Dijkstra</i>	
An elementary derivation of the alternating bit protocol	175
<i>W. H. J. Feijen, A. J. M. van Gasteren, Birgit Schieder</i>	
A set-theoretic model for real-time specification and reasoning	188
<i>C. J. Fidge, I. J. Hayes, A. P. Martin, A. K. Wabenhorst</i>	
Polytypic downwards accumulations	207
<i>Jeremy Gibbons</i>	

Formal derivation of a loadable asynchronous counter	234
<i>Mark B. Josephs</i>	
A semantic approach to secure information flow	254
<i>K. Rustan M. Leino, Rajeev Joshi</i>	
Slack elasticity in concurrent computing	272
<i>Rajit Manohar, Alain J. Martin</i>	
Beyond Fun: Order and membership in polytypic imperative programming	286
<i>David A. Naumann</i>	
Convergence of program transformers in the metric space of trees	315
<i>Morten Heine B. Sørensen</i>	
Realizability of monotone coinductive definitions and its application to program synthesis	338
<i>Makoto Tatsuta</i>	
Calculating a round-robin scheduler	365
<i>Matteo Vaccari, Roland Backhouse</i>
