

# Table of Contents

<b>Introduction</b>	<b>1</b>
<b>1. Introduction to the Theory of Complexity and Approximation Algorithms</b>	<b>5</b>
<i>Thomas Jansen</i>	
1.1 Introduction	5
1.2 Basic Definitions	6
1.3 Complexity Classes for Randomized Algorithms	12
1.4 Optimization and Approximation	16
<b>2. Introduction to Randomized Algorithms</b>	<b>29</b>
<i>Artur Andrzejak</i>	
2.1 Introduction	29
2.2 Las Vegas and Monte Carlo Algorithms	30
2.3 Examples of Randomized Algorithms	32
2.4 Randomized Rounding of Linear Programs	34
2.5 A Randomized Algorithm for MAXSAT with Expected Performance Ratio $4/3$	37
<b>3. Derandomization</b>	<b>41</b>
<i>Detlef Sieling</i>	
3.1 Introduction	41
3.2 The Method of Conditional Probabilities	42
3.3 Approximation Algorithms for MAXE $k$ SAT, MAXSAT and MAXLINEQ3-2	44
3.4 Approximation Algorithms for Linear Integer Programs	46
3.5 Reduction of the Size of the Probability Space	53
3.6 Another Approximation Algorithm for MAXE3SAT	55
3.7 A PRAM Algorithm for MAXIMALINDEPENDENTSET	56

<b>4. Proof Checking and Non-approximability</b> .....	<b>63</b>
<i>Stefan Hougardy</i>	
4.1 Introduction .....	63
4.2 Probabilistically Checkable Proofs .....	63
4.3 PCP and Non-approximability .....	66
4.4 Non-approximability of $\mathcal{APX}$ -Complete Problems .....	69
4.5 Expanders and the Hardness of Approximating $\text{MAXE3SAT-}b$ ...	71
4.6 Non-approximability of $\text{MAXCLIQUE}$ .....	73
4.7 Improved Non-approximability Results for $\text{MAXCLIQUE}$ .....	77
<b>5. Proving the PCP-Theorem</b> .....	<b>83</b>
<i>Volker Heun, Wolfgang Merkle, Ulrich Weigand</i>	
5.1 Introduction and Overview .....	83
5.2 Extended and Constant Verifiers .....	85
5.3 Encodings .....	88
5.4 Efficient Solution Verifiers .....	109
5.5 Composing Verifiers and the PCP-Theorem .....	121
5.6 The LFKN Test .....	134
5.7 The Low Degree Test .....	141
5.8 A Proof of Cook's Theorem .....	157
<b>6. Parallel Repetition of <math>\text{MIP}(2,1)</math> Systems</b> .....	<b>161</b>
<i>Clemens Gröpl, Martin Skutella</i>	
6.1 Prologue .....	161
6.2 Introduction .....	161
6.3 Two-Prover One-Round Proof Systems .....	162
6.4 Reducing the Error Probability .....	164
6.5 Coordinate Games .....	166
6.6 How to Prove the Parallel Repetition Theorem (I) .....	168
6.7 How to Prove the Parallel Repetition Theorem (II) .....	171

<b>7. Bounds for Approximating MAXLINEQ3-2 and MAXEkSAT ...</b>	<b>179</b>
<i>Sebastian Seibert, Thomas Wilke</i>	
7.1 Introduction .....	179
7.2 Overall Structure of the Proofs .....	180
7.3 Long Code, Basic Tests, and Fourier Transform .....	181
7.4 Using the Parallel Repetition Theorem for Showing Satisfiability	189
7.5 An Optimal Lower Bound for Approximating MAXLINEQ3-2 ...	192
7.6 Optimal Lower Bounds for Approximating MAXEkSAT .....	198
<b>8. Deriving Non-approximability Results by Reductions .....</b>	<b>213</b>
<i>Claus Rick, Hein Röhrig</i>	
8.1 Introduction .....	213
8.2 Constraint Satisfaction Problems .....	215
8.3 The Quality of Gadgets .....	217
8.4 Weighted vs. Unweighted Problems .....	221
8.5 Gadget Construction .....	225
8.6 Improved Results .....	230
<b>9. Optimal Non-approximability of MAXCLIQUE .....</b>	<b>235</b>
<i>Martin Mundhenk, Anna Slobodová</i>	
9.1 Introduction .....	235
9.2 A PCP-System for ROBE3SAT and Its Parallel Repetition .....	236
9.3 The Long Code and Its Complete Test .....	239
9.4 The Non-approximability of MAXCLIQUE .....	243
<b>10. The Hardness of Approximating Set Cover .....</b>	<b>249</b>
<i>Alexander Wolff</i>	
10.1 Introduction .....	249
10.2 The Multi-prover Proof System .....	252
10.3 Construction of a Partition System .....	255
10.4 Reduction to Set Cover .....	256
<b>11. Semidefinite Programming and Its Applications to Approximation Algorithms .....</b>	<b>263</b>
<i>Thomas Hofmeister, Martin Hühne</i>	
11.1 Introduction .....	263

11.2 Basics from Matrix Theory ..... 267

11.3 Semidefinite Programming ..... 270

11.4 Duality and an Interior-Point Method ..... 274

11.5 Approximation Algorithms for MAXCUT ..... 278

11.6 Modeling Asymmetric Problems ..... 285

11.7 Combining Semidefinite Programming with  
Classical Approximation Algorithms ..... 289

11.8 Improving the Approximation Ratio ..... 293

11.9 Modeling Maximum Independent Set as a Semidefinite Program? 296

**12. Dense Instances of Hard Optimization Problems .....299**  
*Katja Wolf*

12.1 Introduction ..... 299

12.2 Motivation and Preliminaries ..... 300

12.3 Approximating Smooth Integer Programs ..... 304

12.4 Polynomial Time Approximation Schemes for Dense MAXCUT  
and MAXEkSAT Problems ..... 308

12.5 Related Work ..... 310

**13. Polynomial Time Approximation Schemes for Geometric  
Optimization Problems in Euclidean Metric Spaces .....313**  
*Richard Mayr, Annette Schelten*

13.1 Introduction ..... 313

13.2 Definitions and Notations..... 314

13.3 The Structure Theorem and Its Proof ..... 316

13.4 The Algorithm ..... 320

13.5 Applications to Some Related Problems ..... 321

13.6 The Earlier PTAS ..... 322

**Bibliography .....325**

**Author Index .....335**

**Subject Index .....337**

**List of Contributors .....343**

Lectures on Proof Verification and Approximation  
Algorithms

Mayr, E.W.; Prömel, H.J.; Steger, A. (Eds.)

1998, XII, 348 p., Softcover

ISBN: 978-3-540-64201-5
