|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| Invited Lecture: Silver Graphs: Achievements and New Challenges .....                                                                                                           | 1   |
| <i>Hartmut Noltemeier</i>                                                                                                                                                       |     |
| Invited Lecture: Online Algorithms: A Study of Graph-Theoretic Concepts ..                                                                                                      | 10  |
| <i>Susanne Albers</i>                                                                                                                                                           |     |
| Invited Lecture: Discrete Optimization Methods for Packing Problems<br>in Two and Three Dimensions — With Applications in the Textile and<br>Car Manufacturing Industries ..... | 27  |
| <i>Thomas Lengauer</i>                                                                                                                                                          |     |
| Informatica, Scuola, Comunità: Uno Sguardo dall' Occhio del Ciclone ....                                                                                                        | 29  |
| <i>N. Santoro</i>                                                                                                                                                               |     |
| Proximity-Preserving Labeling Schemes and Their Applications .....                                                                                                              | 30  |
| <i>David Peleg</i>                                                                                                                                                              |     |
| Euler is Standing in Line .....                                                                                                                                                 | 42  |
| <i>D. Hauptmeier, S. O. Krumke, J. Rambau and H.-C. Wirth</i>                                                                                                                   |     |
| Lower Bounds for Approximating Shortest Superstrings over<br>an Alphabet of Size 2 .....                                                                                        | 55  |
| <i>Sascha Ott</i>                                                                                                                                                               |     |
| Complexity Classification of Some Edge Modification Problems .....                                                                                                              | 65  |
| <i>Assaf Natanzon, Ron Shamir and Roded Sharan</i>                                                                                                                              |     |
| On Minimum Diameter Spanning Trees under Reload Costs .....                                                                                                                     | 78  |
| <i>Hans-Christoph Wirth and Jan Steffan</i>                                                                                                                                     |     |
| Induced Matchings in Regular Graphs and Trees .....                                                                                                                             | 89  |
| <i>Michele Zito</i>                                                                                                                                                             |     |
| Mod-2 Independence and Domination in Graphs .....                                                                                                                               | 101 |
| <i>Magnús M. Halldórsson, Jan Kratochvíl and Jan Arne Telle</i>                                                                                                                 |     |
| NLC <sub>2</sub> -Decomposition in Polynomial Time .....                                                                                                                        | 110 |
| <i>Öjvind Johansson</i>                                                                                                                                                         |     |
| On the Nature of Structure and Its Identification .....                                                                                                                         | 122 |
| <i>Benno Stein and Oliver Niggemann</i>                                                                                                                                         |     |
| On the Clique-Width of Perfect Graph Classes .....                                                                                                                              | 135 |
| <i>Martin Charles Golumbic and Udi Rotics</i>                                                                                                                                   |     |
| An Improved Algorithm for Finding Tree Decompositions of<br>Small Width .....                                                                                                   | 148 |
| <i>Ljubomir Perković and Bruce Reed</i>                                                                                                                                         |     |

|                                                                                                 |     |
|-------------------------------------------------------------------------------------------------|-----|
| Efficient Analysis of Graphs with Small Minimal Separators .....                                | 155 |
| <i>K. Skodinis</i>                                                                              |     |
| Generating All the Minimal Separators of a Graph .....                                          | 167 |
| <i>Anne Berry, Jean-Paul Bordat and Olivier Cogis</i>                                           |     |
| Two Broadcasting Problems in Faulty Hypercubes .....                                            | 173 |
| <i>Stefan Dobrev and Imrich Vrto</i>                                                            |     |
| Routing Permutations in the Hypercube .....                                                     | 179 |
| <i>Olivier Baudon, Guillaume Fertin and Ivan Havel</i>                                          |     |
| An Optimal Fault-Tolerant Routing for Triconnected Planar Graphs .....                          | 191 |
| <i>Koichi Wada, Yoriyuki Nagata and Wei Chen</i>                                                |     |
| Optimal Irreversible Dynamos in Chordal Rings .....                                             | 202 |
| <i>Paola Flocchini, Frédéric Geurts and Nicola Santoro</i>                                      |     |
| Recognizing Bipartite Incident-Graphs of Circulant Digraphs .....                               | 215 |
