

Contents

Chapter 1: The Art in Artificial Intelligence	1
1.1 Realism	1
1.2 Purism	3
1.3 Rococo	4
1.4 Classicism	7
1.5 Romanticism	10
1.6 Symbolism	14
1.7 Neo-Classicism	17
1.8 Impressionism	20
1.9 Post-Impressionism	22
1.10 Precisionism	25
1.11 New Realism	28
1.12 Baroque	29
1.13 Pre-Raphaelite Brotherhood	32
1.14 Renaissance	33
1.15 Hindsight	34
Chapter 2: Fifth Generation Architecture	37
2.1 Architecture and Design	38
2.2 Design as Evolution	40
2.3 Design as Co-evolution	43
2.4 Design as Theorem	44
2.5 Design as Premise	48
2.6 Design as Paradigm	50
2.7 Impressionist Design	54
2.8 Classical Design	59
2.9 Logic Machines	61
2.10 Hindsight	64
Chapter 3: Metamorphosis	69
3.1 Apparent Scope for Parallelism	70
3.2 Or-Parallelism	72
3.3 The Prolog Phenomenon	73
3.4 Concurrency and Operating Systems	77
3.5 Concurrency and Distributed Systems	78
3.6 Symbiosis Between Programming Language and System Engineering	80
3.7 Event Driven Synchronization	81
3.8 Earlier Manifestations of Guarded Commands	83
3.9 Condition Synchronization in AI	84
3.10 Guarded Definite Clauses	87
3.11 Simulation of Parallelism by Interleaving	90
3.12 Indeterminacy	92

3.13	The Premature Binding Problem Revisited	93
3.14	Decision Tree Compilation	96
3.15	A Brief History of Guarded Definite Clauses	97
Chapter 4: Event Driven Condition Synchronization		103
4.1	Streams for Free	104
4.2	A Picture is Worth a Thousand Words	106
4.3	Dataflow Computation	108
4.4	Dataflow Design	110
4.5	Dataflow Programming	112
4.6	Message Passing	115
4.7	Eager and Lazy Produces	118
4.8	The Client-Server Paradigm	122
4.9	Self-Balancing Merge	124
4.10	Synchronization	125
4.11	Readers and Writers	127
4.12	The Dining Philosophers	128
4.13	The Brock-Ackerman Anomaly	132
4.14	Conditional Semantics	133
4.15	Open Worlds and Abduction	135
4.16	Implementation Issues	137
Chapter 5: Actors and Agents		139
5.1	The Actor Model	140
5.2	Haggling Protocols	144
5.3	Consensus Protocols	146
5.4	Market Forces	148
5.5	Poker Faced	148
5.6	Virtual Neural Networks	149
5.7	Biological and Artificial Networks	150
5.8	Self-Replicating Neural Networks	152
5.9	Neuron Specialization	152
5.10	The Teacher Teaches and the Pupil Learns	157
5.11	Neural Simulation	160
5.12	Simulated Life	162
5.13	Life Yet in GDC	163
5.14	Cheek by Jowl	164
5.15	Distributed Implementation	165
5.16	Agent Micro-Architectures	167
5.17	Metalevel Agent Architectures	168
5.18	Actor Reconstruction of GDC	170
5.19	Inheritance Versus Delegation	172

Chapter 6: Concurrent Search	175
6.1 A Naive Prolog Solution to the 8-Puzzle	175
6.2 Speculative Parallelism	180
6.3 Non-speculative, Non-parallel Linear Search	182
6.4 A Practical Prolog Solution to the 8-Puzzle	183
6.5 A Generic Search Program	186
6.6 Layered Streams	188
6.7 Eliminating Redundant Search	190
6.8 A Direct GDC Solution Using Priorities	193
6.9 Search Anomalies	195
6.10 Branch-and-Bound Search	198
6.11 Game Tree Search	203
6.12 Minimax and Alpha-Beta Search	205
6.13 Parallel Game Tree Search	207
6.14 Parallel Search and Cooperative Distributed Solving	211
 Chapter 7: Distributed Constraint Solving	213
7.1 All-Pairs Shortest Path Problem	216
7.2 The Graph Coloring Problem	220
7.3 Minimal Spanning Trees	233
7.4 Conclusion	244
 Chapter 8: Meta-interpretation	247
8.1 Metalanguage as Language Definition and Metacircular Interpreters	248
8.2 Introspection	250
8.3 Amalgamating Language and Metalanguage in Logic Programming	251
8.4 Control Metalanguages	254
8.5 A Classification of Metalevel Systems	256
8.6 Some GDC Monolingual Interpreters	259
8.7 GDC Bilingual Interpreters	265
8.8 An Interpreter for Linda Extensions to GDC	269
8.9 Parallelization via Concurrent Meta-interpretation	274
8.10 Conclusion	277
 Chapter 9: Partial Evaluation	279
9.1 Partial Evaluation	280
9.2 Futamura Projections	283
9.3 Supercompilation	289
9.4 Partial Deduction	295
9.5 Partial Evaluation and Reactive Systems	297
9.6 An Algorithm for Partial Evaluation of GDC Programs	300
9.7 Actor Fusion	305
9.8 Actor Fusion Examples	308

9.9 Partial Evaluation of an Interpreter 310

Chapter 10: Agents and Robots 319

10.1 Reactive Agents: Robots and Softbots 319

10.2 A Simple Robot Program 321

10.3 Reaction and Intelligence 327

10.4 Objects, Actors and Agents 329

10.5 Objects in GDC 332

10.6 Agents in GDC 336

10.7 Top-Down and Bottom-Up Multi-agent Systems 339

10.8 GDC as a Coordination Language 341

10.9 Networks and Mobile Agents 345

10.10 Conclusion 348

References and Bibliography 353
