

# Contents

<b>1. Introduction</b>	1
1.1 Integer Optimization and Heuristics	1
1.2 Integer Local Search	5
1.3 Experimental Results	7
1.4 Research Contributions	9
<b>2. Frameworks for Combinatorial Optimization</b>	11
2.1 Integer Programming Branch-and-Bound	11
2.2 Finite Domain Constraint Programming	13
2.3 Local Search	15
2.3.1 Meta-heuristics	16
2.3.2 RISC and CISC Local Search	17
2.3.3 Local Search for SAT	18
2.3.4 Application Domains of SAT Local Search	20
2.4 Modeling Languages	21
2.5 Search Relaxations and Integer Local Search	21
<b>3. Local Search for Integer Constraints</b>	25
3.1 Over-Constrained Integer Programs	25
3.1.1 Definition	27
3.1.2 Relation to Integer Linear Programs	28
3.1.3 Constraint-Bounds	31
3.2 Integer Local Search: WSAT(OIP)	32
3.2.1 The Score	33
3.2.2 The Main Loop	34
3.2.3 Move Selection and Tabu Search Extensions	34
3.3 Combinations with Linear Programming	37
3.3.1 Bounds from LP Relaxations	37
3.3.2 Initialization by Rounding LP Solutions	38
3.3.3 Search Space Reduction Using LP Reduced Costs	40
3.3.4 Implementation Issues	41
3.4 A Graphical Interpretation	43
3.5 Related Work	47
3.5.1 Integer Programming Heuristics	48
3.5.2 Local Search in Constraint Satisfaction	51
3.6 Summary	51

<b>4. Case Studies Methodology</b>	53
4.1 Optimization in Practice: Criteria of Success	53
4.1.1 Scaling with Increasing Problem Size	54
4.1.2 Scaling with Increasing Constrainedness	55
4.1.3 Flexibility and Residual Robustness	56
4.2 The Problem Class Selection	56
4.3 The Empirical Comparisons	57
<b>5. Time-Tabling and Sports Scheduling</b>	59
5.1 The Progressive Party Problem	59
5.1.1 Problem Description and Formulation	60
5.1.2 Experimental Results and Comparison	62
5.2 The ACC Basketball Scheduling Problem	64
5.2.1 Double Round Robin Scheduling	65
5.2.2 Problem Specification of ACC97/98	66
5.2.3 Integer Local Search Formulation	68
5.2.4 Redundant Constraints	71
5.2.5 Previous (Multi-stage) Approaches	72
5.2.6 Experimental Results under Varied Constrainedness	73
5.2.7 Minimal Distortion Mirroring	76
5.3 Conclusions	78
<b>6. Covering and Assignment</b>	81
6.1 Radar Surveillance Covering	81
6.1.1 Problem Description and Formulation	81
6.1.2 Experimental Results under Varied Problem Size	83
6.2 Course Assignment	87
6.2.1 Problem Description and Formulation	87
6.2.2 Experimental Results under Varied Problem Size	89
6.2.3 A Related Application: Reviewer Assignment	91
6.3 Conclusions	93
<b>7. Capacitated Production Planning</b>	95
7.1 Capacitated Lot-Sizing	96
7.2 Integer Local Search Formulation	98
7.3 Mixed Integer Programming Formulation	99
7.3.1 Lagrangean Relaxation Approach	100
7.3.2 Restricting the Problem	101
7.4 Experimental Results	101
7.4.1 Comparison of Results	101
7.4.2 Lower Bounds	104
7.5 Conclusions	105

<b>8. Extensions</b> .....	107
8.1 Current Limitations .....	107
8.2 An Alternative Scoring Scheme.....	108
8.3 Future Research .....	111
8.4 Conclusions .....	112
<b>A. A Complete AMPL Model for ACC97/98</b> .....	115
<b>References</b> .....	122
<b>Index</b> .....	135

Integer Optimization by Local Search

A Domain-Independent Approach

Walser, J.P.

1999, XX, 144 p., Softcover

ISBN: 978-3-540-66367-6
