

TABLE OF CONTENTS

1 - INTRODUCTION

Region of study.....	1
Scope and main topics of the study.....	15
Objectives and overall approach	17

2 - GOVERNING PRINCIPLES IN REGIONAL TECTONIC EVOLUTION

Basic issues in determining the tectonic evolution of orogenic regions	
Four aspects of rock-based tectonic analysis	20
Hierarchy of continental lateral tectonic units	22
Interaction of internal and external forces in the evolution of mobile megabelts and their constituent tectonic zones	22
Some basic tectonic definitions	29

3 - ROCK UNITS IN REGIONAL TECTONIC ANALYSIS

Lateral and vertical crustal units: general classification	33
Structural-formational étages, thrust sheets, and metamorphic-rheologic panels as fundamental tectonic units of the crust	35
Methodologies of tectonic analysis based on physical models of lithospheric plates	38
Some rheological complexities in the Earth's crust and upper mantle.....	41
Assessment of geological information from oceanic-crust magnetic anomalies.....	43

4 - CONCEPTUAL FUNDAMENTALS OF REGIONAL TECTONIC ANALYSIS ON CONTINENTS

Continental and oceanic lithospheric masses as lateral tectonic units	49
---	----

Recognition of lateral tectonic units within mobile megabelts	51
Vertical tectonic units within crustal blocks	64
Continuing development of the theory of mobile megabelts	67

5 - VIEW OF THE CORDILLERAN MOBILE MEGABELT'S EVOLUTION FROM THE CRATON

Choice of perspective for undistorted visualization of mobile-megabelt evolution	69
Demarcation of the boundary between craton and mobile megabelt	72
Prejudices in existing interpretations of geophysical data	78

6 - OMINECA OROGENIC BELT AS TECTONOTYPE OF THE EASTERN CORDILLERAN MIOGEOSYNCLINE

Definition of <i>orogenic grain</i>	101
Need for correct distinction of regional tectonic étages and stages based on formalized criteria and proper procedures of examining the rock record	102
Definition of fundamental lateral and vertical tectonic units in the Canadian Cordillera from results of geologic mapping.....	105
Framework of main structural-formational étages making up the post- basement orogenic grain in the eastern Cordilleran miogeosyncline.....	106
Mesozoic and Cenozoic tectonic evolution of the southern Omineca orogenic zone	
Some new and non-traditional information	110
New geologic facts at odds with previous hypotheses about the southern Omineca Belt	120
Need for caution in balancing cross-sections in orogenic zones	127
Basing conclusions on observable geological facts as a sound alternative to fitting data to pre-conceived models.....	130
Tectonic interpretation of geochemical and isotopic data, constrained by regional geology.....	133
Further reviews of Mesozoic and Cenozoic tectonic manifestations in rocks in the southern Omineca miogeosyncline and adjacent areas	139
Geologically grounded interpretation of Lithoprobe seismic data	149

Tectonics of the eastern Cordillera from combined analysis of geological and geophysical data.....	156
Gravity and magnetic lineaments	168
Further improvements in the knowledge of regional tectonics by integrating geological, geophysical and geochemical data	170

7 - BROAD LOOK AT GEODYNAMICAL MECHANISMS OF CRUSTAL RESTRUCTURING IN THE CORDILLERAN OROGENS AND MEDIAN MASSIFS

Low-angle normal and thrust structures in mobile-megabelt interiors	175
Dangers of fashionable prejudices	181
Median massifs: semi-reworked remnants of ancient craton(s) within the Cordilleran mobile megabelt, with emphasis on the northern Cordillera	
The median massifs' Precambrian basement.....	187
Genetic links between assumed terranes	194
Mediterranean seas and local subduction	208
Tectonic position of the Bowser Basin	212
Causes of Cenozoic tectonism	214
Insights into deep crustal structure of the Intermontane median-massif belt from potential-field and seismic data - a critical look	217
Insights into geologic history of the Intermontane median massif(s) from analysis of its post-basement structural-formational étages	245

8 - LESSONS FROM CORDILLERAN GEOLOGY FOR THE METHODOLOGY OF REGIONAL TECTONIC ANALYSIS OF MOBILE MEGABELTS

Hypotheses, models and rock reality.....	260
Application of the guiding principles of tectonics in regional analysis	266
Shaky foundations of terrane-tectonic speculations	269
Real pre-existing continental-crust structures vs. preconceived assumptions in regional tectonic analysis of mobile megabelts	
A lesson from Eurasia	274

False certainties in regional tectonic analysis	279
Expressions of Cordilleran tectonic zones in the metallogenic zonation	281

9 - PRACTICAL UTILITY OF ROCK EVIDENCE AND GEOPHYSICAL STUDIES IN RESTORING REGIONAL TECTONIC HISTORY IN MOBILE MEGABELTS

Diversity of crustal deformation types in the Cordilleran mobile megabelt.....	292
Benefits of compiling and critically reviewing geological and geophysical data to provide rational constraints on combined interpretations	299
Types of crustal movements in the Cordilleran mobile megabelt and adjacent cratonic regions: further overview studies.....	306
Rock-based tectonic history of continental masses as a reliable basis for reconstructing the global tectonic evolution: examples from Eurasia and North America	314
Principal role of rock evidence in tectonic analysis.....	326
REFERENCES	328

The Cordilleran Miogeosyncline in North America

Geologic Evolution and Tectonic Nature
