1	Definitions and examples	1
1.1	Preliminaries	1
1.2	Basic constructions	4
1.2.1	The projection method	5
1.2.2	The universal covering method	8
1.2.3	The suspension method	6
1.2.4	Whitney theorem	11
1.2.5	Connected sum of flows	11
1.2.6	The branch covering method	12
1.3	Basic examples	12
1.3.1	Gradient and Morse-Smale flows	12
1.3.2	Transitive flows	13
1.3.3	Flows with Cantor type limit sets	14
1.3.4	Area preserving and Hamiltonian flows	17
1.3.5	Harmonic and geodesic vector fields	19
2	Poincare-Bendixson's theory	23
2.1	Existence of closed transversal	23
2.2	Absence of non-trivial recurrent trajectories on some surfaces	27
2.3	Hilmy's and Cherry's theorems on quasiminimal sets	28
2.4	Maier's theorems on quasiminimal sets	30
2.5	Gutierrez's structure theorem	34
2.6	Limit set of individual trajectory	35
2.6.1	List of limit and minimal sets	35
2.6.2	Results of Solntzev and Vinograd	37
2.6.3	On the existence of minimal sets	38
3	Decomposition of flows	41
3.1	Decomposition theorems	41
3.1.1	Irreducible flows on torus	41

3.1.2	Canonical neighborhood	42
3.1.3	Gardiner – Levitt’s decomposition	42
3.1.4	Pants decomposition	45
3.1.5	Decomposition of area preserving and Hamiltonian flows	47
3.2	Center of flow	50
3.3	Blowing-down of flows	53
3.4	Regular flows	55
3.4.1	Singular trajectories	55
3.4.2	Cells	56
3.5	Application: smoothing of flows	59
4	Local theory	63
4.1	Topological normal forms	63
4.2	Analytical normal forms	64
4.3	Smooth normal forms	66
4.4	Finitely smooth normal forms	66
4.5	Degenerate critical points	67
4.6	C^1 normal forms of degenerate singularities	70
5	Space of flows and vector fields	73
5.1	Structural stability	73
5.2	Peixoto’s graphs. Classification of Morse-Smale flows	76
5.2.1	Rotation systems	76
5.2.2	Peixoto theorems	79
5.2.3	Peixoto’s counterexample revisited	81
5.3	Lyapunov’s method	83
5.3.1	Lyapunov functions	83
5.3.2	Lyapunov graphs	86
5.4	Connected components of Morse-Smale flows	87
5.5	Degrees of non-stability	89
5.6	Typical properties of non-stable flows	92
6	Ergodic theory	95
6.1	Liouville’s theorem	96
6.2	Kolmogorov’s theorem for flows on torus	98
6.3	Non-trivial invariant measures	100
6.4	Ergodicity	101
6.5	Mixing	106
6.6	Entropy	111

7 Invariants of surface flows	115
7.1 Topological classification of torus flows	116
7.1.1 Rotation numbers	116
7.1.2 Classification of minimal flows	119
7.1.3 Classification of the Denjoy flows	120
7.1.4 Classification of flows of the Cherry type	121
7.2 Oriented surfaces of genus ≥ 2	128
7.2.1 Aranson-Grines homotopy rotation class	125
7.2.2 Homotopy rotation orbit	126
7.2.3 Equivalence of irrational flows	127
7.2.4 Properties of the homotopy rotation classes	128
7.3 Application of geodesic laminations	129
7.4 Transitive flows on non-orientable surfaces	132
7.4.1 Torus with a cross-cup	132
7.4.2 Non-orientable surfaces of genus ≥ 4	134
7.5 Classification of exceptional minimal sets	134
7.6 Classification of the regular flows	135
7.6.1 Leontovich-Maier's theorem for sphere flows	136
7.6.2 Neumann-O'Brien's orbit complex	136
7.6.3 Bolsinov-Fomenko's classification of Hamiltonian flows	139
7.7 Classification of non-wandering flows	141
7.7.1 Elementary cells of non-wandering flows	142
7.7.2 Conley-Lyapunov-Peixoto graphs	144
7.7.3 Equivalence Problem	145
7.7.4 Realization Problem	146
7.8 Cayley graph of a flow	147
7.8.1 Finite groups and Cayley graphs	147
7.8.2 Isomorphism Problem	149
7.8.3 Realization Problem	150
7.9 Homology and cohomology invariants	151
7.9.1 Asymptotic cycles	152
7.9.2 Fundamental class of A. Katok	155
7.9.3 Zorich's cycles	160
7.10 Rotation sets of surface flows	163
7.11 Smooth classification of flows	164
7.11.1 Torus and Klein bottle	165
7.11.2 Closed orientable surfaces of genus ≥ 2	167

8	C^*-algebras of surface flows	175
8.1	Irrational rotation algebra	175
8.1.1	Dimension groups	176
8.1.2	Continued fractions	178
8.1.3	Effros-Shen's Theorem	179
8.1.4	Embedding of A_α	180
8.1.5	Projections of A_α	181
8.1.6	Morita Equivalence	183
8.2	Artin's rotation algebra	184
8.2.1	Myrberg's Approximationssatz	184
8.2.2	Artin's numbers	186
8.3	K-theory	193
8.3.1	Torus with Reeb's components	195
8.3.2	Baum-Connes Conjecture	195
8.4	C^* -algebras of Morse-Smale flows	197
9	Semi-local theory	201
9.1	Denjoy's and Schwarz's theorems	202
9.2	Cherry's problem	203
9.3	Local structure preventing quasiminimality	207
10	Anosov-Weil problem	209
10.1	Theorems of Weil and Anosov	210
10.1.1	Asymptotic directions	210
10.1.2	Weil's theorem and Weil's conjecture	211
10.1.3	Anosov's theorem	213
10.1.4	Proof of Weil's conjecture and Weil's theorem	216
10.2	Asymptotic direction of individual curves	217
10.2.1	Non-trivial recurrent semi-trajectories	217
10.2.2	Trajectories of analytic flows	219
10.2.3	Leaves of foliation	219
10.2.4	Curves with restriction on the geodesic curvature	220
10.3	Approximation of curve by trajectories of a flow	221
10.4	Limit sets of curves and trajectories at the absolute	222
10.5	Deviation of curves from the geodesics	224
10.5.1	The deviation property of trajectories	224
10.5.2	Deviation from the geodesic frameworks	227
10.5.3	Branched coverings	228
10.5.4	Swing of trajectories near hyperbolic lines	229
10.6	Examples of unbounded deviation	233

10.6.1 Surfaces of genus ≥ 2	233
10.6.2 Irrational direction on torus	235
10.6.3 Rational direction on torus	236
11 Non-compact surfaces	239
11.1 Kaplan's classification	239
11.2 Level curves of harmonic functions	242
11.3 Markus's classification	245
11.4 Structural stability	246
11.5 Neumann's example	248
11.6 Inaba's example and Beniere-Meigniez's theorem	250
11.7 Beniere-Hector's theorem	252
11.8 Aranson-Zhuzhoma's example	253
12 Triptych	257
12.1 Geodesic frameworks revisited	257
12.2 On continuity and collapse of geodesic frameworks	260
12.3 C^r -closing lemma	263
