

# CONTENTS

<b>Introduction and summary of results.</b>	<b>1</b>
0.1 Towards the signature of loop spaces: Elliptic genus	1
0.2 Elliptic genera	4
0.3 Vertex operator super-algebras	7
0.4 $G$ -invariant vertex operator super-subalgebras and their vertex operators	9
0.5 Classifying spaces of geometric structures on manifolds	13
0.6 Elliptic genera as modules over vertex operator super-algebras	16
0.7 Infinite dimensional symmetries of elliptic genera for Kähler manifolds	17
<b>Chapter I. Elliptic genera</b>	<b>22</b>
1.1 Elliptic genera	22
1.2 Theta functions and elliptic functions	29
1.3 Proof of Theorem 4 of §1.1	32
1.4 The modular properties of elliptic genera	35
1.5 On the divisibility of coefficients of the elliptic genus $\varphi_{\text{ell}}^R$	42
1.6 Spinors on loop spaces: the Witten genus	46
<b>Chapter II. Vertex operator super-algebras</b>	<b>49</b>
2.1 Vertex operator super-algebras: A brief introduction	49
2.2 The infinite dimensional Clifford modules as vertex operator super-algebras and their modules	60
2.3 Clifford algebras, Virasoro algebras and affine Lie algebras as subalgebras of the vertex operator super-algebra $V$	65
2.4 The adjoint operators of vertex operators	72
<b>Chapter III. <math>G</math>-invariant vertex operator super-subalgebras</b>	<b>93</b>
3.1 $V^G$ as vertex operator super-algebra	93
3.2 Lie algebras as Lie subalgebras of Clifford algebras	94
3.3 Commutants of Lie subalgebras in $\mathfrak{o}(2N)$ and Casimir elements	104
3.4 Generating $G$ -invariant vectors in $(V)_*$	111
3.5 Vertex operators associated to $G$ -invariant vectors of low weight	122
3.6 Unitary Virasoro algebras	129
3.7 Vertex operators generated by complex volume forms	139

3.8	Symplectic Virasoro algebras	147
3.9	Kähler forms in quaternionic vector spaces	174
3.10	Unitary Virasoro algebras in quaternionic vector spaces	185
3.11	Vertex operators for products of Kähler forms and their commutators	188
3.12	Determination of $G$ -invariant vectors of low weight in the vertex operator super-algebra $(V)_*$	211
<b>Chapter IV. Geometric structures in vector spaces and reductions of structure groups on manifolds</b>		<b>222</b>
4.1	Some geometric structures in vector spaces	222
4.2	Moduli of geometric structures as $G$ -orbits in representation spaces: Some examples of interest	236
4.3	A general theory of geometric structures in vector spaces and their compatibilities	250
4.4	On connections and parallelism	268
4.5	Reductions of structure groups on manifolds and parallel sections	285
<b>Chapter V. Infinite dimensional symmetries in elliptic genera for Kähler manifolds</b>		<b>303</b>
5.1	Kählerian manifolds	303
5.2	Generalizations of Riemannian metrics, Riemannian volume forms, Kähler forms, complex volume forms, and quaternion-Kähler forms	313
5.3	Twisted $G$ -Dirac operators	326
5.4	Elliptic genera as modules over vertex operator super-algebras of parallel sections	337
5.5	Infinite dimensional symmetries in elliptic genera for Kähler manifolds	357
