

Preface

Paving the Way for an Open Service Market

We live in an age when powerful communications technology is becoming available to everyone. From our home we can send and receive not only analogue voice, but also growing volumes of digital information and even intelligence in the form of agents. We are becoming increasingly mobile and are expecting the same level of connectivity in the home, in the office, and on the road.

The regulatory and commercial environment in which we communicate is changing. The telecommunications market is becoming increasingly competitive. The Internet is erasing the borders between information technology and telecommunications. And the way we do business is ever more dominated by electronic exchanges of information.

Is our technology ready for the open market of networks and services? Can we manage the growing complexity of computing and telecommunications technology and place it at the service of the people? The challenge for the research community is to develop the tools and techniques that will ultimately bring the full power of communications and information to everyone, in a way that everyone can easily use.

The Sixth International Conference on Intelligence in Services and Networks (IS&N'99) is all about technology for paving the way to the open services market. Since the first IS&N conference in 1992 the focus of the IS&N program has continually shifted. We see existing technologies maturing while new ones emerge, but the bottom line has always been putting technology at the service of the people. The result is a fascinating mix of confirmed and new technologies.

Mobile and intelligent agents form the most manifest stream of emerging technologies, reflected in 13 papers in this volume. These include articles that deal with agent-related technical issues (5 papers), as well as papers that describe the application of agents to specific problems in telecommunications (8 papers). In fact “intelligent” and “mobile” agents can be seen as two quite distinct tracks. Both are well represented in the program (5 and 8 papers, respectively).

Projects addressing more mature technologies like CORBA, Intelligent Networks, TMN and TINA are now in a position to present confirmed results, prototypes, and in some cases, field trials. TINA and CORBA form the subject of about 10 papers while at least 5 address the management of networks and services.

In a world of new and legacy systems that must coexist, interworking enjoys significant interest (5 papers). Signaling System Number 7 (SS.7) is considered in 2 distinct articles as a possible carrier of both CORBA and agent-based communications, thus providing a new form of “intelligent signaling”. Other papers address the evolution of IN and TMN towards open, distributed, object-oriented architectures.

An interesting observation is that *service creation* enjoys a strong interest this year: 6 papers are directly related to this subject. While telecommunications are becoming increasingly dominated by software, we seem to be becoming more and more aware of the need for methods and tools to control the “service crisis”.

In addition to the more “classical” IS&N themes, we see several original new directions. The need for technologies that can manage multimedia streams has lead to

a number of new techniques, like the use of enhanced session models and Java-enabled multi-media encoding. A number of papers deal with searching and brokering of services in an open market.

In summary, this book is a unique state-of-the-art account of technologies that enable intelligent services and networks to serve the people. It is a reflection not only of key research done within the ACTS program sponsored by the European Commission, but, equally, of research from many other sources. It is the result of the cooperative effort of researchers, authors, reviewers, and editors. Use it to your advantage.

Acknowledgments

This volume could not exist without the authors of the papers. Some 100 papers were contributed. Many of the submitted papers could not be accepted but the authors of these papers are thanked for their efforts.

The editors would like to thank the members of the Technical Program Committee and the numerous reviewers, listed below, for their effort in assuring the quality of this volume, as well as the section editors, who have written the introductions to each section. Special thanks goes to Raymond Llavador, who coordinated the review process and assisted in the final editorial process.

Steering Committee

Al Mullery (Chairman), Mario Campolargo, Jaime Delgado, Han Zuidweg

Technical Program Committee

Ordinary Members

Han Zuidweg (Chairman)
Stefano Antoniazzi
E. Athanassiou
Rob Brennan
Stefan Covaci
Jaime Delgado
Sofoklis Efremidis
Nigel Jefferies
Jens Kristensen
Thomas Magedanz
Ahmed Patel

List of Reviewers

José Jesus Acebrón	Anastasius Gavras	Vincent Olive
Miltos Anagnostou	Panos Georgatsos	Ahmed Patel
Stefano Antoniazzi	David Griffin	George Pavlou
Eleutherios Athanassiou	Carsten Gyrn	Enric Peig
Manooch Azmoodeh	Lars Hagen	Christian Petersen
Alessandro Barbagli	Takeo Hamada	Reinhardt Posch
Kyriakos Baxevanidis	Jim Hardwicke	Martin Potts
Nuno Beires	Patrick Hellemans	Bart Preneel
Johan E. Bengtsson	Anh Van Hoang	Didoe Prevedourou
Mikhael Bessonov	Terry Hodgkinson	Gilles Privat
Vincent Bic	Keith Howker	Kimmo Raatikainen
Lennart H. Bjerring	Nigel Jefferies	Friedhelm Ramme
Indranil Bose	Mikael Jørgensen	Rick Reed
Wiet Bouma	Fotis Karayannis	Tony Richardson
Ralf D. Bracht	Pieter Kesteloot	Corrado Rosa
Rob Brennan	Kristofer Kimbler	Jose Luis Ruiz
Markus Breugst	Jens Kristensen	Amardeo Sarma
Alan Brookland	Jean-Pierre Lacombe	Hans-Detlef Schulz
Heinz Brüggemann	Patricia Lago	Simone Sedillot
Gaetano Bruno	Yair Lahav	Juan Serrat
Louise Burness	Lorenz Lehmann	Vjekoslav Sinkovic
Brian Byrnes	Herbert Leitold	Chris Smith
Eurico Carrapatoso	David Lewis	Josep Sole-Pareta
Sang Choi	Beat Liver	George D. Stamoulis
Alain Conchon	Fiona Lodge	Keith Start
Steve Corley	Ignac Lovrek	Frank Steegmans
Jacopo Corridoni	Ferdinando Lucidi	Alan Steventon
Michael Cox	Thomas Magedanz	Peter Stollenmayer
Haitham Cruickshank	Karl-Johan Malmgren	Ben Strulo
Laurie Cuthbert	Marcel Mampaey	Lars Bo Sørensen
Giovanna De Zen	Gennaro Marino	Thanassis Tiropanis
Jaime Delgado	Claudio Maristany	David Tracey
Luca Deri	Ramon Marti	Ciaran Treanor
Yves Deswarte	Giovanni Martini	Sebastiano Trigila
Bruno Dillenseger	Mirella Mastretti	Juan C. Vazquez Garcia
Sofoklis Efremidis	Luc Mathan	Iakovos Veniris
Pier Luigi Emiliani	Joanna McCaffrey	Luigi Verri
Takeyuki Endo	Walter Merlat	Yannis Vithynos
Lorenzo Faglia	Max Michel	Vincent Wade
Josef Fink	Kathleen Milsted	Paul Wallace
Kevin Fogarty	Luigi Mori	Kevin Watkins
Francisco Fontes	David Muldowney	Thomas Weigert
Susana Franco Pino	Alvin P. Mullery	Frans Westerhuis
David Freestone	Divine Ndumu	Timothy Wright
Motohisa Funabashi	Declan O'Sullivan	Martin Yates
