

TABLE OF CONTENTS

1 - BASIC NOTIONS AND DEFINITIONS

Intrinsic difficulties in describing geologic objects	1
Tectonic definition of continents, and of cratons as their fundamental constituents	2
Interaction of indigenous and external tectonic forces acting on evolving cratons	9
Recognition of vertical and horizontal tectonic units in cratons	12
Early approaches to subdividing the crystalline metamorphic basement of the North American craton	16
Nomenclature of lateral tectonic units relevant to tectonic platforms	18
Transformation of the notion <i>miogeosyncline</i>	20
Review of pervious approaches to discrimination of tectonic units in platformal sedimentary cover in the North American craton	23
Ambiguities in the definition of Sloss' Sequences	25
Other sequence stratigraphies	28
Tectonic significance of unconformities in the geologic record	29
Approaches to rock-unit classification in the <i>North American Stratigraphic Code</i> .	30

2 - STRUCTURAL-FORMATIONAL, TECTONIC ÉTAGES AS FUNDAMENTAL UNITS OF REGIONAL TECTONIC ANALYSIS

Difficulties in extracting tectonic information from rock characteristics	32
Regional tectonic restructuring episodes as a basis for division of a geologic record into tectonic units	33
The concept of rock-made tectonic étages and tectonic stages	36
Structural-formational étages as tectonic units in a regional stratigraphic record	41
Epistemological roots of current hypotheses about the cratonic areas of North America	54
Uses of tectonic étages and stages to improve the objectivity of regional tectonic analysis	49

3 - REGIONAL TECTONIC ANALYSIS OF THE WESTERN CANADA SEDIMENTARY PROVINCE IN ALBERTA, SASKATCHEWAN AND ADJACENT PARTS OF THE U.S.

Reasons for the choice of western Canada as an example for detailed study.....	57
Tectonic étage and stage between the Middle Cambrian and the Silurian	65
Tectonic étage and stage between the Devonian and the Early Mississippian	79
Tectonic étage and stage between the Late Mississippian and the Triassic.....	97
Tectonic étage and stage between the Jurassic and the Early Cretaceous	105
Tectonic étage and stage between the late Neocomian and the middle Late Cretaceous	113
Tectonic étage and stage between the Late Cretaceous Campanian and the Early Tertiary.....	121
Tectonic étage and stage between the Pliocene and the Recent	131

4 - METHODOLOGICAL REASONS FOR USING STRUCTURAL-FORMATIONAL ÉTAGES IN REGIONAL TECTONIC ANALYSIS

Methods of outlining tectonic regions in cratons	136
Perieratons, forelands, foredeeps and their corresponding sedimentary basins	138
Importance of correct recognition of the tectonic nature of sedimentary basins for correct regional tectonic analysis.....	144
Platformal cratonic basins and arches, and their relationships through geologic history.....	149
Return to confirmed facts, away from speculative models and groundless hypotheses	157

5 - RECONSTRUCTION OF STRUCTURAL HISTORY OF A CRATON BY USING STRUCTURAL-FORMATIONAL ÉTAGES IN ITS COVER AND PRE-COVER VOLCANO-SEDEMENTARY BASINS

Outlines of the Proterozoic Laurentian craton in North America	159
Tectonic zoning of the interior of the Laurentian craton	170

Role or major Precambrian fault families in pre-cover tectonics of Canadian cratonic areas	196
Guiding importance of Precambrian volcano-sedimentary basins for designation of regional tectonic stages during the cratonic megastage before the deposition of Phanerozoic platformal cover	204
Designation of lateral tectonic units in the Alberta Platform basement: a discussion	212
Lessons from the failure of initial attempts to unravel tectonic history of the structural framework in the basement of the Alberta Platform	222
Construction of depth-to-top maps on regional marker surfaces, and their tectonic utility	225
Cratonic shields and platforms as contrasting features in paleogeography and tectonics.....	232

6 - FINDING AN ADEQUATE REGIONAL TECTONIC INTERPRETATION CONSTRAINED BY MAPPABLE PROPERTIES OF ROCKS

Rationale in tectonic studies of shield terrains	238
Rationale in tectonic studies in Alberta and other cratonic platforms.....	243
Craton's boundaries and how to define them.....	253

7 - PLACE OF NEOTECTONIC AND CURRENT TECTONIC CRUSTAL MOVEMENTS IN REGIONAL TECTONIC STUDIES

Manifestations of neotectonic and current tectonic crustal movements, and their significance	259
Insights into neotectonics from the distribution of the latest Cenozoic deposits and drainage systems	262
Fracture fabrics in the Western Canada Sedimentary Province: their identification and classification.....	267
Second look at geophysical data with the benefit of information about neotectonic and current tectonic activity	279
Main classes of vertical tectonic crustal movements as manifested in the neotectonic and current stages	287

8 - CONCLUSIONS: ADVANTAGES OF PRACTICAL TECTONICS

Historical pragmatic character of geology as a field of human activity and knowledge	290
Social needs for rock-based regional tectonics.....	292
Ability of practical tectonics to meet the demands of the 21 st century.....	295
Significance of rock-based tectonics in the development of sciences about the Earth	300
Some obvious deficiencies of physical models that ignore rock-based tectonic constraints	303
Picture of global tectonics from the achievements of practical tectonic studies.....	306
Theory and practice in rock-based tectonics	308
Welding science and practicality in rock-based regional tectonics a historical look.....	310
REFERENCES	313

Principles of Practical Tectonic Analysis of Cratonic
Regions

With Particular Reference to Western North America

Lyatsky, H.; Friedman, G.M.; Lyatsky, V.B.

1999, XX, 372 p. 95 illus. With online files/update.,
