

# Contents

<b>Pion and Kaon Production as a Probe for Hot and Dense Nuclear Matter</b> . . . . .	1
<i>Helmut Oeschler</i>	
1 Introduction . . . . .	1
2 The Experiment . . . . .	4
3 $K^+$ Production . . . . .	5
4 $K^-$ Production . . . . .	8
5 Pion Spectra . . . . .	9
6 The Time Evolution of Pion Emission . . . . .	11
7 Summary . . . . .	18
References . . . . .	19
<b>Fluid Dynamics for Relativistic Nuclear Collisions</b> . . . . .	21
<i>Dirk H. Rischke</i>	
1 Introduction and Conclusions . . . . .	21
2 The Basics . . . . .	22
3 Numerical Aspects . . . . .	34
4 One-Dimensional Solutions . . . . .	39
5 Freeze-Out . . . . .	61
References . . . . .	69
<b>The Use of Statistical Mechanics to Describe Hadron Production in High Energy Collisions</b> . . . . .	71
<i>Francesco Becattini</i>	
1 Introduction . . . . .	71
2 Basics of the Model . . . . .	72
3 A Brief Summary of the Analysis of Hadron Multiplicities . . . . .	75
4 Strangeness Suppression . . . . .	79
5 Multiplicity Distributions . . . . .	81
6 Heavy Flavours and Spectra . . . . .	83
7 Outlook . . . . .	86
References . . . . .	88
<b>Introduction to Light Cone Field Theory and High Energy Scattering</b> . . . . .	89
<i>Raju Venugopalan</i>	
1 Introduction . . . . .	89
2 Light Cone Quantization and the Light Cone Algebra . . . . .	91
3 The Light Cone QCD Hamiltonian . . . . .	95
4 High-Energy Eikonal Scattering and the Parton Model in QED . . . .	100

5	Bjorken Scaling and Light Cone Fock Distributions . . . . .	105
	References . . . . .	112
	<b>Chiral Symmetry Breaking in Hot Matter . . . . .</b>	<b>113</b>
	<i>Sandi P. Klevansky</i>	
1	Introduction . . . . .	113
2	Equilibrium Thermodynamics . . . . .	116
3	The Nambu–Jona-Lasinio Model . . . . .	134
4	Non-equilibrium formulation and transport equation . . . . .	146
5	Concluding comments . . . . .	159
6	Acknowledgments . . . . .	160
	References . . . . .	160
	<b>Physics and Astrophysics of Strange Quark Matter . . . . .</b>	<b>162</b>
	<i>Jes Madsen</i>	
1	Introduction . . . . .	162
2	Physics of SQM in Bulk . . . . .	164
3	Strangelets . . . . .	169
4	SQM in Cosmology . . . . .	181
5	SQM in Neutron Stars; Strange Stars . . . . .	185
6	SQM in Cosmic Rays . . . . .	195
7	Conclusion and Outlook . . . . .	198
	References . . . . .	199
	<b>Out of Equilibrium Thermal Field Theories -</b>	
	<b>Elimination of Pinching Singularities . . . . .</b>	<b>204</b>
	<i>Ivan Dadić</i>	
1	Introduction . . . . .	204
2	Propagators and the Schwinger-Dyson Equation . . . . .	207
3	Threshold Factor . . . . .	211
4	Pinch Singularities in QED . . . . .	215
5	Pinch Singularities in Massless QCD . . . . .	219
6	Pinch Singularities in Schwinger-Dyson Series . . . . .	223
7	Conclusion . . . . .	230
	References . . . . .	233
	<b>Exact Conservation of Quantum Numbers in the Statistical</b>	
	<b>Description of High Energy Particle Reactions . . . . .</b>	<b>235</b>
	<i>Esko Suhonen, Antti Keränen, Jean Cleymans</i>	
1	Introduction . . . . .	235
2	Quantum Statistical Concepts in Brief . . . . .	236
3	Exact Strangeness Conservation . . . . .	238
4	Exact Baryon, Charge and Strangeness Conservation . . . . .	242
5	Generalization of the Projection Method . . . . .	245
6	Summary . . . . .	248
	References . . . . .	248

Hadrons in Dense Matter and Hadrosynthesis  
Proceedings of the Eleventh Chris Engelbrecht Summer  
School Held in Cape Town, South Africa, 4-13 February  
1998

Cleymans, J.; Geyer, H.B.; Scholtz, F.G. (Eds.)  
1999, XII, 252 p. 50 illus., Hardcover  
ISBN: 978-3-540-65209-0
