

Table of contents

Preface to the Russian edition	VII
Preface to the English translation	X
Translator's preface	XII
Chapter 1. Fundamentals of nonlinear solid mechanics.....	1
1 Essentials of tensor analysis.....	3
1.1 Notations and co-ordinate systems	3
1.2 Base vectors, metric tensor	5
1.3 Geometrical objects. Invariants of the second order tensor	10
1.4 Covariant differentiation. Physical components	17
1.5 Particular cases	21
2 Description of state of strain.....	23
2.1 Strain tensor and its invariants.....	23
2.2 Changes in geometrical objects	28
2.3 Definition of „tracking“ loads	31
2.4 Simplifications for small deformations.....	33
2.5 Simplifications for small rotation angles	36
3 Description of state of stress	43
3.1 Stress tensors	43
3.2 Equations of motion. Boundary conditions	50
3.3 Virtual work of external forces.....	54
3.4 Simplification for small deformations	57
3.5 Feasible generalisation of the small deformations theory.....	58
4 Elastic solids	63
4.1 General elastic solid.....	63
4.2 Hyperelastic solid	65
4.3 Linear elastic anisotropic solid	73
4.4 On the development of the simplest nonlinear elasticity theory.....	81
5 Plastic solids	93
5.1 Deformation theory (theory of small elastoplastic deformations).....	93
5.2 Flow theory (general equations)	99
5.3 Flow theory of strain-hardening solids (inversion of relationships, particular cases)	111
5.4 Theory of the perfectly plastic solid	124

6	Solids with rheological properties	129
6.1	The simplest relationships of linear theory	129
6.2	Linear theory of viscoelasticity (integral form)	135
6.3	Nonlinear theory of viscoelasticity (nonlinear creep)	140
6.4	Complex media. Constitutive equations for viscoelastoplastic solids..	145
Chapter 2. Fundamentals of linearised solid mechanics		155
7	States of stress and strain	157
7.1	Principles of construction of linearised theory	157
7.2	Geometrical relationships	160
7.3	Equations of motion. Boundary and initial conditions	164
7.4	Simplifications for small deformations. Classification of linearised problem statements	166
7.5	Definition of „tracking“ load	171
7.6	Uniform states	173
7.7	Feasible generalisations of the small initial deformations theory	184
8	Elastic solids	187
8.1	Compressible solids	187
8.2	Incompressible solids	194
8.3	On the analogy with the linear elasticity theory	200
8.4	Theorem on the uniqueness of solution in the linearised elasticity ...	204
8.5	Sufficient conditions of stability for compressible bodies	207
8.6	Sufficient conditions of stability for incompressible bodies	212
9	Non-elastic solids	217
9.1	Deformation theory (theory of small elastoplastic deformations)	217
9.2	Flow theory of strain-hardening plastic solids	222
9.3	Theory of the perfectly plastic solids	231
9.4	Viscoelastic solids	235
9.5	Viscous solids. Inversion of constitutive equations	244
9.6	Viscoelastoplastic solids	247
Chapter 3. General issues of three-dimensional linearised theory of deformable bodies stability (TLTDBS)		257
10	Stability criteria for deformable bodies	259
10.1	On surface and volume forces. Classification of problems	259
10.2	Stability criteria and statement of the problem for elastic bodies	261
10.3	Criterion of stability of the state of equilibrium and problem statement for plastic solids. Generalised concept of continuing loading	263
10.4	Criterion of stability of deformation. Comparative analysis of two criteria of stability	266
10.5	Stability criterion and problem statement for bodies with rheological properties	273
11	General statement of stability problem for deformable bodies	275

11.1	Representation of linearised constitutive equations for solids with rheological properties. Non-uniform initial state.....	275
11.2	Representation of linearised constitutive equations for solids with rheological properties. Uniform precritical state	283
11.3	General statement of stability problem.....	287
11.4	Application of Galerkin's method	291
12	Sufficient conditions of applicability of the static method	295
12.1	Compressible bodies. General case	295
12.2	Incompressible bodies. General case.....	300
12.3	„Tracking,, loads applied to the whole surface of a body.....	303
12.4	„Tracking,, loads applied to the part of body surface	305
13	Variational principles.....	309
13.1	Compressible bodies under „dead,, loads. Particular case	310
13.2	Compressible bodies under „dead,, loads. General case.....	312
13.3	Incompressible bodies under „dead,, loads. Particular case.....	314
13.4	Incompressible bodies under „dead,, loads. General case	315
13.5	„Tracking,, loads applied to the whole surface of a body.....	317
13.6	„Tracking,, loads applied to the part of body surface	319
14	General solutions for uniform precritical states.....	329
14.1	Compressible bodies. General relationships	329
14.2	Compressible bodies. Plane and anti-plane problems.....	332
14.3	Compressible bodies. Three-dimensional problems	336
14.4	Incompressible bodies. General relationships.....	347
14.5	Incompressible bodies. Plane and anti-plane problems	350
14.6	Incompressible bodies. Three-dimensional problems.....	354
14.7	On the representations of solutions for one feasible generalisation of the small initial deformations theory	361
14.8	Determination of coefficients for particular types of solids	366
15	Approximate approach in three-dimensional theory of stability	381
Chapter 4. Analysis of the simplest problems		387
16	All-round compression of isotropic simply connected body. Application of the integral stability criteria.....	389
16.1	Application of sufficient conditions of stability in the integral form to compressible bodies. Analysis of results for various types of bodies ...	389
16.2	Implementation of the problem statement in the differential form to compressible bodies. Analysis of results for various types of bodies ...	399
16.3	Application of sufficient conditions of stability in the integral form to incompressible bodies. Analysis of results for various types of bodies	404
16.4	Implementation of the problem statement in the differential form to incompressible bodies. Analysis of results for various types of bodies	408
17	Internal (structural) instability. Properties of the basic system of simultaneous equations.....	413
17.1	Compressible bodies.....	416
17.2	Incompressible bodies	424

17.3	Bodies with rheological properties	430
17.4	Implementation of the approximate approach	433
18	Near-the-surface instability. Problems for semi-restricted regions.....	435
18.1	Half-plane. Analysis of results for various compressible and incompressible bodies.....	436
18.2	Half-space. Analysis of results for various compressible and incompressible bodies.....	449
19	Compression of a strip (plane strain problem).....	471
19.1	Incompressible strips	474
19.2	Compressible strips.....	480
19.3	Asymptotic analysis of thin-walled strip	483
19.4	Approximate approach. Analysis of results for isotropic and composite strips	486
19.5	Analysis of results for a thick-walled strip	493
20	Compression of high-elastic non-circular cylindrical body. Implementation of variational principles	501
20.1	Basic equations. Implementation of variational principles.....	502
20.2	Bar mode of stability loss. Numerical examples	508
	Supplement. Exact solutions of mixed plane problems of linearised solid mechanics.....	517
	References.....	547
	References supplement	553
	Biography	557

Fundamentals of the Three-Dimensional Theory of
Stability of Deformable Bodies

Guz, A.N.

1999, XVI, 557 p. 25 illus., Hardcover

ISBN: 978-3-540-63721-9
