Chapter 1: Future Communication Networks Using Software Agents..... 1

Alex Hayzelden, John Bigham, Michael Wooldridge and Laurie Cuthbert

1	Introduction	1
1.1	Some Agent Related Definitions.....	3
1.2	Rationale for Multiple Software Agents	6
1.3	Agent Architectures	8
1.4	Open Systems and Heterogeneous Multi-agent Systems.....	10
1.5	Co-ordination in Multi-Agent Systems	13
1.6	Software Agent Communication	14
1.7	Mobile Software Agents	17
1.8	Trends in Agent-Based Computing	20
Part 2	Communications Systems - Integration of Paradigms	23
2.1	Telecommunications Considerations	23
2.2	The Internet Architecture	24
2.3	General Network Complexity	25
2.4	Users and the Need for Mobility	26
2.5	The Merging of Traditional Telephony and Computing Paradigms	27
2.6	Centralized or Distributed Management	28
2.7	Software Agent Based Network Management	29
2.8	Service Management.....	30
2.9	Current Telecommunications Management Platforms	31
2.10	Agents and Economic Theory for Telecommunications Management..	36
2.11	Guessing the Future of Telecommunications	39
2.12	Challenges of Software Agents in Telecommunications	40
Part 3	Review of the Subsequent Chapters.....	41
4	Summary	45

Chapter 2: Agents of Change in Future Communication Systems..... 58

Hyacinth Nwana and Divine Ndumu.

1	Introduction	58
2	Trends, Lessons Learned and some Viewpoints on the Future of Communications Systems	59
3	Distributed Software: the Quintessential ‘Glue’ of Future Communication Systems	63
4	Agents in Future Communication Systems: A General Case	64
5	Agents Research at BT Labs and Future Communications Systems	68
5.1	Collaborative Agents	69
5.2	Interface Agents/Information Agents	74
5.3	Mobile Agents.....	80
5.4	Reactive & Hybrid Agents.....	80

5.5 Heterogeneous Agent Systems.....	81
6 What Society Should be Doing to Prepare for Emergence of FCS	82
7 Conclusion	83

**Chapter 3: A Multi-Agent System Architecture for Scalable Management
of High Performance Networks: Applying Arms Length Autonomy 86**

Richard Evans, Fergal Somers, David Kerr, and Donie O’Sullivan.

1 Introduction.....	86
1.1 Network Management Challenges Posed by ATM.....	87
2 Intelligent Agents	88
2.1 Distributed Management Using Intelligent Agents.....	88
3 The Hybrid System.....	91
3.1 Hierarchy of Authorities.....	91
3.2 Design of an Authority	92
3.3 The Design of Agents.....	93
3.4 Co-ordinating the Behavior of the Agent System.....	94
3.5 ASL - Open Agent Architecture	97
4 Concerns about the Agent Approach.....	101
4.1 Deliberative vs. Reactive Agent Architectures in Hybrid.....	101
4.2 Tradeoffs in the Choice of Content Language.....	102
5 Benefits of the Agent Approach	103
5.1 Benefits of Using Agent Technology	103
5.2 Agent Oriented Middleware for Software Integration.....	104
6 Analysis of Hybrid Performance	105
7 Conclusions	109

**Chapter 4: Distributed Intelligent Agents: A Solution for the Management
of Complex Telecommunications Services 112**

Marius Busuioc.

1 Introduction	112
2 The Agent Platform	113
2.1 Which Agents?	113
2.2 The Architecture Design	114
2.3 Generic Agent Model.....	117
3 The Prototype	118
3.1 The Implementation of Agent Types.....	118
3.2 Graphical User Interfaces.....	120
3.3 Service Scenarios	121
4 Lessons.....	124
4.1 Decomposition, Distribution and Allocation of Tasks	125
4.2 Communication and Interaction Languages	126
4.3 Coherent Collective Behavior	126
4.4 Inter-agent Negotiation.....	127
5 Future work.....	128

**Chapter 5: Organization and Coordination for On-Line Routing
in Communications Networks..... 130**

Steven Willmott, Boi Faltings, Christian Frei and Monique Calisti.

1 Introduction	130
2 A routing problem.....	131
2.1 Generic Problem Definition	132
2.2 How Difficult is it?	132
2.3 The Need for Agents.....	133
3 Applying current work in Distributed Artificial Intelligence	135
3.1 The Network Routing Domain.....	136
3.2 Current Agent Based Approaches to Routing Problems	140
3.3 Non Agent Based Approaches to the Routing.....	142
4 Adaptive Control Structures	142
4.1 Blocking Islands and Space Partitioning.....	143
4.2 How Agents Run Blocking Islands	146
4.4 Description and Discussion.....	152
5 Conclusions.....	154

**Chapter 6: Multi-Agent Interactions for a Network Management System
(Tele-Macs Approach)..... 160**

Alex Hayzelden, John Bigham and Zhiyuan Luo.

1 Introduction	160
2 ATM Network Management - The Problems	162
2.1 Virtual Path Connection Management	162
2.2 Why Adopt Agent Technology?.....	163
3 Building Modularized Software Systems	164
4 Distributed Multi-Agent Communications Control.....	166
4.1 Distributed Multi-layered Agent Control Architecture (Tele-MACS) ..	167
4.2 Functionality of Each Agent	167
4.3 Tele-MACS Approach for Network Management	168
4.4 Suppressed Views of the World	169
5 Application of Tele-MACS to a Network Management Problem	169
5.1 Control of the Bandwidth Resource Configuration in ATM Networks ..	170
6 Network Management Multi-Agent System Implementation.....	172
7 Multi-Agent Model (IMPACT System).....	174
7.1 Physical Location of the Principle Agents.....	175
7.2 Multi-threading and Agent Implementation.....	176
7.3 Agent Communications.....	177
7.4 Multi-Agent Interactions.....	178
7.5 Agent Software System	178
8 Future Work.....	179
9 Conclusion	180

Chapter 7: Resource Adaptation for a Scalable Agent Society

in the MoTiV-PTA Domain 183

Christian Gerber, Bernhard Bauer and Donald Steiner.

1 Introduction	183
2 A Generic Resource Allocation Procedure	184
2.1 A Hybrid Representation of an Agent Society	185
2.2 Adaptation through Monitoring and Resource Allocation	187
2.3 The SIF Simulation Environment	189
3 MECCA	190
3.1 FIPA.....	190
3.2 The MECCA System	192
3.3 Personal Travel Assistance	193
4 Simulation Studies in the PTA Scenario	196
4.1 Simulation	196
4.2 Optimization	198
5 Conclusion and Future Work	202
Appendix	203

Chapter 8: Economic Agents for Automated Trading 207

Chris Preist.

1 Commerce meets the Web	207
2 Agents in Electronic Commerce	208
3 Agents which Negotiate	209
4 Negotiating Strategies.....	210
5 Marketplaces where Agents Meet.....	211
6 The Persistent Shout Double Auction	212
6.1 Supply and Demand.....	212
6.2 Agents which Adapt to the Market	213
6.3 Stable Marketplaces of Agents	215
7 Moving to Realistic Markets.....	217

Chapter 9: Agent-Oriented Middleware for Integrating Customer Network Services 221

Stefan Poslad, Jeremy Pitt, Abe Mamdani, Robert Hadingham and Philip Buckle.

1 Introduction	221
2 Background: Network and Service Level Integration	223
2.1 Network Level Integration	223
2.2 Service Integration	224
2.3 Use of Middleware to aid Service Integration	226
2.4 Software Agents to Aid Service Integration (Enhance Access)	228
3 Design Issues for Agent-Oriented Middleware	233
3.1 The Importance of Standards	233
3.2 Basic Architectural Designs.....	235
3.3 The Degree to which the AOM should be Agentised.....	236

3.4	How to Integrate the Agents with an Existing Infrastructure	237
4	Common Agent Service Brokering Architecture (CASBAh).....	238
4.1	Relationship of CASBAh to Other Work.....	240
4.2	System Prototype and Scenario.....	241
5	Conclusions.....	242

Chapter 10: Cooperative Distributed Problem Solving for Communication Network Management..... 247

Robert Weihmayer and Richard Brandau.

1	Introduction: Toward Cooperative Expert Systems.....	247
1.1	Application of DAI to Telecommunications	249
1.2	Customer Network Control	250
2	Cooperation in the Customer Network Control Domain	252
2.1	Nature of the Agents and Organization of the Domain	252
2.2	Basic Three-Agent Example.....	253
2.3	Cooperation to Solve a Facility Failure Problem	256
3	Agent Knowledge and Capabilities	260
3.1	Local Expertise.....	260
3.2	What Agents Know About Each Other.....	260
3.3	Interagent Language to Support Cooperation.....	261
3.4	Agent Control Functions	264
4	TEAM-CPS: A Research Testbed.....	265
4.1	Planning Issues in Local Agent Problem Solving.....	265
4.2	Mechanism for Cooperation	266
5	Conclusion and Ongoing Work	267

Chapter 11: Mobile Software Agents for Control in Telecommunications Networks..... 270

Stephen Appleby and Simon Steward.

1	Introduction	270
2	Rules for Robustness.....	271
3	Programming a Mobile Agent.....	272
4	Testing Mobile Agents.....	273
5	An Example Application.....	274
5.1	The Load Management Agent	274
5.2	The Parent Agent.....	277
5.3	Parent Agent Population Management	279
6	Testing the System.....	280
6.1	The Network.....	280
6.2	The Traffic Profile.....	281
6.3	Measuring Agent Performance.....	281
7	The Nature of the Control Provided by Mobile Software Agents	284

8 Conclusions.....	285
Chapter 12: Cooperating Mobile Agents for Dynamic Network Routing	287
Nelson Minar, Kwindla H. Kramer and Pattie Maes.	
1 Introduction	287
2 Managing Networks via Populations of Mobile Agents	288
2.1 The Importance of Decentralization	288
2.2 Mobile Agents.....	289
2.3 Flexible Systems	289
2.4 Cognitive Tools for Systems Design.....	291
2.5 Related Work	292
2.6 Why Not Mobile Agents?	292
3 Experimental Model	294
3.1 Nodes	295
3.2 Agents	295
3.3 Experimental Measurements	297
4 Results	297
4.1 First Result: Performance of a System Over Time.....	297
4.2 Analysis of Agent Algorithm and Parameters	299
4.3 Overhead analysis	301
5 Conclusions & Future Work	303
Chapter 13: Minimal Agents for Communications Network Routing: The Social Insect Paradigm	305
Ruud Schoonderwoerd and Owen Holland.	
1 Introduction	305
2 Load balancing.....	306
2.1 Least Cost Routing.....	307
3 Ants in Nature.....	308
3.1 Basic Principles of Trail Laying	309
3.2 Previous Work on Ants.....	310
4 Ant-Based Control (ABC) for Network Management	311
4.1 Pheromone Tables	312
4.2 Using Ants for Network Management	313
4.3 Ageing and Delaying Ants	315
4.4 How Calls are Routed	315
4.5 Initialization.....	316
4.6 Noise.....	317
4.7 Summary of the Ant-Based Load Balancing System	318
4.8 Parameters.....	318
5 Results of Experiments	319
5.1 Adaptation to Network Topology	320

5.2	Adaptation to the Call Statistics within a Given Topology	321
5.3	Adaptation to Temporary Situations	321
5.4	Adaptation in General	321
6	Ants for Load Balancing in Packet Switched Networks	321
7	Conclusions.....	323

Chapter 14: Grasshopper – An Agent Platform for Mobile Agent-Based Services in Fixed and Mobile Telecommunications Environments 326

M. Breugst, S. Choy, L. Hagen, M. Höft, T. Magedanz.

1	Introduction	326
2	Grasshopper – The Agent Platform	327
2.1	Concepts	327
2.2	Agent Development	336
2.3	Grasshopper Conclusion	339
3	Using Grasshopper for Telecommunications	339
3.1	Using Grasshopper within Intelligent Networks	341
3.2	Using Grasshopper within Mobile Communication Systems	347
3.3	One Step Beyond: Active Networking	352
4	Conclusion	354

Chapter 15: Mobile Agents for Managing Networks: The MAGENTA Perspective..... 358

Akhil Sahai and Christine Morin.

1	Introduction	358
2	State of the Art of Mobile Code in Network Management	359
2.1	Network Management Systems.....	359
2.2	Mobile Code in Network Management.....	360
3	Mobile Agents in Network Management?	362
4	The Astrolog Network Management System	364
5	MAGENTA Environment.....	365
5.1	Components of the Environment.....	366
5.2	Characteristics of the Environment	367
6	Functionalities of the Astrolog Network Management System	370
7	Performance Evaluation.....	371
7.1	Context.....	371
7.2	Comparison between Client Server and Mobile Agents	371
8	Conclusion	379

Software Agents for Future Communication Systems

.

Hayzelden, A.; Bigham, J. (Eds.)

1999, XIII, 385 p., Hardcover

ISBN: 978-3-540-65578-7
