

Contents

Part I: Optical Measurements in Heat and Mass Transfer	1
Enhanced Heat Transfer: Endless Frontier, or Mature and Routine? <i>Arthur E. Bergles</i>	3
Ammonia Absorption Method and Liquid Crystal Thermography for Accurate Local Mass and Heat Transfer Measurements <i>Martin Fiebig and Karsten Schulz</i>	19
Holographic Interferometry in Heat and Mass Transfer <i>Robert Tauscher</i>	35
Optical Investigation of Transport Phenomena During Solidification Process <i>Yau-Ming Chen, Yuan-Jen Chang and Yeong-Tsuen Hsieh</i>	65
Visual Investigation of Boiling Phenomena in CHF Subcooled Flow Boiling <i>Gian Piero Celata, Maurizio Cumo, Andrea Mariani and Giuseppe Zummo</i>	79
Thermal Pattern and Boiling Enhancement of Water Containing Cationic Surfactants <i>Gad Hetsroni and Albert Mosyak</i>	95
Bubble Nucleation and Growth During Saturated Pool Boiling on a Thin Vertical Plate <i>Marcus Wienecke, Youyou Yan and David B. R. Kenning</i>	107
Optical Study of Bubble Dynamics in Microgravity Pool Boiling <i>Johannes Straub</i>	121
Meso- and Micro-Scale Frontiers of Compact Heat Exchangers <i>Sunil S. Mehendale, Anthony M. Jacobi and Ramesh K. Shah</i>	139

XVIII

Convective Heat Transfer and Fluid Dynamics in Heat Exchanger Applications <i>Bengt Sundén</i>	159
---	-----

Interfacial and Plate Temperature Histories During Dropwise Condensation in the Presence of Noncondensibles <i>Frank Ganzevles and Cees van der Geld</i>	171
---	-----

Measurements of Transient Phenomena in Vapor-Liquid Systems <i>John C. Chen</i>	185
--	-----

Part II: Optical Measurements in Multiphase Flow..... 199

Dynamic Simulations of Pressure-Drop Type Instabilities in a Two-Phase Upflow Boiling System Including the Effect of Thermal Non-Equilibrium <i>Liping Cao, Sadik Kakaç and Hongtan Liu</i>	201
--	-----

Fibre Optical Sensors for Measuring Local Quantities in Gas Liquid Two-Phase Flows <i>Klaus Spindler and Erich Hahne</i>	217
---	-----

Three-Phase Flow Measurements Using a Hot-Film Anemometer <i>Stephen D. Mayo and Richard T. Lahey, Jr.</i>	233
---	-----

The Tomographical Dual Wavelength Photometry – A New Tool to Distinguish Micro- and Macro-Mixing <i>Mathias Buchmann and Dieter Mewes</i>	249
--	-----

Short-Time Holography and Holographic PIV Applied to Engineering Problems <i>Oliver Feldmann</i>	263
---	-----

The Development of the Phase Doppler Technique <i>Cameron Tropea</i>	279
---	-----

Development of a Conductance Sensor for Measuring Solids Concentration in Large Diameter Slurry Pipelines <i>James F. Klausner, Feng Fu and Renwei Mei</i>	293
---	-----

A Visualization Study of Jet Impingement on Cylindrical Surfaces <i>Richard J. Goldstein, Amy S. Fleischer and Cristina Cornaro</i>	307
--	-----

Part III: Optical Measurements in Combustion..... 319

Stable Vortex Structures in Axisymmetric Flame Under Oscillating
Combustion

Oleg G. Martynenko and Pavel P. Khramtsov 321

Applications and Potentials of Optical Measurement Techniques
for the Investigation of Transient Combustion Phenomena

Andreas Eder and Martin Jordan 329

Measurements of Velocities, Temperatures, Emissions and Particle Sizes
in Model Furnaces

Alex M. K. P. Taylor and James H. Whitelaw 347

Evaluation of Noisy Coherent Anti-Stokes Raman Spectra
by Evolutionary Algorithms

Udo Linnemann, Peter Roosen and Hans-Jürgen Koß 381

Investigation of Using Broadband Excitation and Detection in Evaluating
Flowfield Temperatures and Pressures

John Mendoza and Ivan Catton 391

Porous Medium (PM) Combustion Technology and Its Application
to Internal Combustion Engines

Franz Durst and Mirosław Weclas 405

Epilogue 419

A General Method for Scaling and Analyzing Transport Processes

Novak Zuber 421

Index 461

Applied Optical Measurements

Lehner, M.; Mewes, D. (Eds.)

1999, XIX, 463 p. 276 illus., 8 illus. in color., Hardcover

ISBN: 978-3-540-66173-3
