

Contents

Preface	V
Contents	VII
List of Contributors	XV
1 Introduction	1
Part I. Chemical Reactions	
2 Metallocene Catalyzed Polymerization of Methylmethacrylate	7
<i>Akira Miyazawa</i>	
2.1 Introduction	7
2.2 Polymerization of Methacrylates	7
2.2.1 Syndiospecific Polymerization of MMA	8
2.3 Polymerization Mechanism of Syndiotactic PMMA	10
2.3.1 Polymerization Mechanism Initiated by Lanthanocene Complexes	10
2.3.2 Polymerization Mechanism Initiated by Cationic Zirconocene Catalyst	10
2.4 Isospecific Polymerization of MMA	12
2.5 Conclusion	13
3 Radical Isomerization Polymerization	17
<i>Jun-ichi Sugiyama</i>	
3.1 Introduction	17
3.2 Vinylcyclopropanes	17
3.3 Cyclic Vinyl Ethers	21
3.4 Cyclic Ketene Acetals	22
3.5 Miscellaneous	28
3.5.1 Allyl Isomerization	28
3.5.2 Aromatization	29

3.5.3	Polyenes	29
3.5.4	Future of Radical Isomerization. Polymerization	29
4	High Pressure Solid State Polymerization	33
	<i>Hiroshi Yamawaki, Katsutoshi Aoki</i>	
4.1	Introduction	33
4.2	Experimental Technique for High-Pressure Research	33
4.2.1	High-Pressure Cell	33
4.2.2	Determination of Pressure	34
4.2.3	Microscope Observation	34
4.3	Spectrometry under High Pressure	35
4.3.1	Raman Measurement	35
4.3.2	Infrared Measurement	35
4.4	Phase Transition and Polymerization	37
4.4.1	Hydrogen Cyanide	37
4.4.2	Acetylene	38
5	Biodegradable Polymers	41
	<i>Masao Kunioka</i>	
5.1	Introduction	41
5.2	Microbial Polyesters	42
5.3	Microbial Poly(Amino Acid)s	43
5.4	Microbial Polysaccharides	47
5.5	Chemically Synthesized Biodegradable Polymer	47
Part II.	Specialty Polymers	
6	Polymer Objects: Towards New Polymer Architectures	53
	<i>Toshimi Shimizu</i>	
6.1	Introduction	53
6.2	New Polymer Architectures	53
6.3	Interlocked Polymers	54
6.3.1	Polycatenane	54
6.3.2	Polyrotaxane	56
6.3.3	Conjugated Poly-Catenated Rotaxane	57
6.4	Dendrimer	58
6.5	Supramolecular Self-Assembly	63
6.6	Concluding Remarks	67
7	Thermo-Responsive Polymer Gels	71
	<i>Hisao Ichijo, Ryoichi Kishi</i>	
7.1	Introduction	71
7.2	Preparation and Swelling Properties of Poly(Vinyl Methyl Ether) Hydrogel	72

7.3	Fast Responsive PVME Hydrogels Having Microporous Structure	74
7.4	Fast Responsive PNIPAAm Hydrogels Having Microporous Structure	75
7.5	Thermo-Reversible Adsorption of Nonionic Surfactants on PVME Gel	76
7.6	Swelling of PVME Gel in Ionic Surfactant Solutions	78
7.7	Control of Enzyme Activity	80
7.8	Application for Thermo-Responsive Devices	81
7.9	Conclusion	82
8	Biomimetic Membranes	85
	<i>Norihiko Minoura</i>	
8.1	Introduction	85
8.2	Mimics of the Taste Cell	85
8.3	Mimics of the Retina	89
8.4	Selective Transport of Molecules	91
9	Polymeric Membranes for Separation	95
	<i>Kenji Haraya, Shuguang Li, Kensaku Mizoguchi</i>	
9.1	Introduction	95
9.2	Structure and Various Kinds of Separation Membranes	96
	9.2.1 Microfiltration (MF)	98
	9.2.2 Ultra-Filtration (UF)	98
	9.2.3 Reverse Osmosis (RO) and Nanofiltration (NF)	99
	9.2.4 Pervaporation (PV)	101
9.3	Gas Separation Membranes	103
	9.3.1 Transport Mechanism	103
	9.3.2 Membrane Structures	105
	9.3.3 Membrane Materials	106
	9.3.3.1 Glassy Polymers	107
	9.3.3.2 Rubbery Polymers	117
	9.3.4 Permeability Prediction	121
10	Metal Clusters Dispersed in Organic Materials	125
	<i>Yukimichi Nakao</i>	
10.1	Introduction	125
10.2	Metal Organosols	125
	10.2.1 Reduction in the Solution	125
	10.2.2 Interphase Migration	127
	10.2.3 Metal-Dissolving Organic Solvents	130
	10.2.4 Methods from Bulk Metals	130
10.3	Metal Cluster-Containing Solid Sols	131
	10.3.1 Solidification of Organosols	131
	10.3.2 Thermal Decomposition in Solid Solution	132

10.3.3	Microphase Separation	132
10.3.4	Migration of Clusters	133
11	Organic Magnetic Materials	137
	<i>Kazuhisa Murata</i>	
11.1	Introduction	137
11.2	Magnetic Properties	137
11.3	Organic Magnetic Materials	139
11.3.1	Molecular Magnets	139
11.3.2	Polymeric Magnets	143
11.3.3	Carbon Magnets	143
12	Nonlinear Optical Materials	151
	<i>Hiro Matsuda, Yoshikazu Tanabe</i>	
12.1	Introduction	151
12.1.1	Nonlinear Optical Effect	151
12.1.2	Measurement of Hyperpolarizability and Nonlinear Optical Susceptibilities	154
12.1.3	Poling	155
12.2	Second-Order Nonlinear Optical Materials	156
12.2.1	Trade-off Relation between Second-Order Optical Nonlinearities and Transparency	156
12.2.2	Second-Order Nonlinear Optical Crystals	156
12.3	Electro-optic Effect	158
12.3.1	Guest-Host Systems	158
12.3.2	Side-Chain Polymers	158
12.3.3	Main-Chain Polymers	159
12.3.4	Crosslinked Systems	160
12.3.5	Sol-Gel Glasses	161
12.3.6	Electro-optic Devices	161
12.4	Photorefractive Effect	162
12.5	Third-Order Nonlinear Optical Materials	163
12.5.1	Switching Devices	163
12.5.2	Polydiacetylene	164
12.5.3	Other Polymers and Molecules	166

Part III. Polymer Processing

13	Laser Processing of Polymers	171
	<i>Akira Yabe</i>	
13.1	Introduction	171
13.2	Polymer Processing by Laser Ablation	172
13.2.1	Laser Ablation of Polymer	172
13.3	Etching: Micromachining	175

13.3.1	Surface Modification	177
13.3.2	Deposition: Thin Film Preparation	182
13.4	Polymer Processing by Laser-Induced Chemical Reaction	184
13.4.1	Laser-Induced Chemical Reactions	184
13.4.2	Surface Modification	185
13.5	Summary	187
14	Solid-Phase Forming and Mechanical Properties of Polymers	191
	<i>Kazuo Nakayama, Akira Kaito</i>	
14.1	Introduction	191
14.2	Hot Drawing of Ultrahigh Molecular Weight Polyethylene	192
14.2.1	Characteristics of Ultrahigh Molecular Weight Polyethylene	192
14.2.2	Drawing of Ultrahigh Molecular Weight Polyethylene	192
14.2.3	Mechanical Properties of Drawn UHMW-PE Sheets	193
14.2.4	Structure of Drawn UHMW-PE	194
14.3	Hydrostatic Extrusion	195
14.3.1	Hydrostatic Extrusion Method	195
14.3.2	Tube Extrusion of High Density PE	196
14.3.3	Extrusion of Heat-Treated UHMW-PE	197
14.4	Rolling of Films	200
14.4.1	Application of Various Rolling Methods	200
14.4.2	Rolling of Polypropylene Sheets	201
14.4.3	Rolling of Multilayer Polymer Sheets	202
14.5	Roller-Drawing of Polymers	203
14.5.1	Roller-Drawing Method	203
14.5.2	Mechanical Properties of Roller-Drawn Sheet	205
14.5.3	Higher-Order Structure of Roller-Drawn Polymer Sheet	206
14.6	Preparation of Ultra-Thin Polymer Films by Mechanical Deposition	207
14.6.1	Mechanical Deposition Method	207
14.6.2	Highly Oriented Films of Poly(dimethylsilane) by Mechanical Deposition	208
14.6.3	Oriented Films of Poly(p-phenylene) by Mechanical Deposition	210

Part IV. New Measurements

15	Precise Measurement of Molecular Weight	217
	<i>Shinichi Kinugasa</i>	
15.1	Introduction	217
15.2	Accuracy and Precision	218
15.3	Size Exclusion Chromatography	218
15.4	Size Exclusion Chromatography with Multiple Detection	221

15.5	Light Scattering	223
15.6	Nuclear Magnetic Resonance (NMR)	224
15.7	Matrix-Assisted Laser Desorption/Ionization Time-of-Flight Mass Spectrometry (MALDI-TOFMS)	225
15.8	Uniform Oligomers	227
16	Surface Forces in Polymeric Systems	231
	<i>Masakatsu Hato, Satomi Ohnishi, Masami Murata</i>	
16.1	Introduction	231
16.2	Methods	231
16.2.1	Surface Force Apparatus (SFA)	231
16.2.2	The Colloid Probe Technique	233
16.3	Interactions between Polymer Layers in Liquids	234
16.3.1	Interactions between Neutral Polymers	234
16.4	Attractive Forces Between “Hydrophobic” Surfaces Across Water	242
16.5	Concluding Remarks	246
Part V. Structure and Properties		
17	Structure of Organic Thin Films	253
	<i>Kiyoshi Yase</i>	
17.1	Introduction	253
17.2	Problems and their Solutions in TEM Observation of Organic and Polymer Materials	254
17.3	High Resolution Observation of Organic and Polymer Thin Films	254
17.3.1	Phthalocyanine Thin Films	254
17.3.2	Polymer Thin Films	257
17.3.3	Fatty Acids	260
17.4	Electron Spectroscopic Imaging of Plasma-Polymerized Films . .	261
17.5	Summary	265
18	Molecular Motions in Bulk Polymers	267
	<i>Yoshikazu Tanabe</i>	
18.1	Chain Dynamics	267
18.1.1	Experimental Observations	267
18.1.2	Computer Simulation of Polymer Chain Motions in the Bulk State	269
18.1.3	Effects of Torsional Librations	274
18.2	Glass Transition	275
18.2.1	Experimental Features of the Glass Transition	275
18.2.2	Trapping Diffusion Model of the Glass Transition	278
18.3	Cis-Trans Thermal Isomerization of Polyacetylene	280

19 Computer Simulation of Polymers	287
<i>Masao Doi</i>	
19.1 Introduction	287
19.2 Mean Field Monte Carlo Method	287
19.2.1 The Principle	287
19.2.2 Application to Rigid Zig-Zag Molecules	289
19.3 Mean Field Calculation for Polymers	290
19.3.1 General Formulation	290
19.3.2 Application to Polymers Grafted on Solid Surfaces	292
19.4 Dynamical Mean Field Calculation	293
19.4.1 Principle of Calculation	293
19.4.2 Phase Separation	295
19.4.3 Ordering of Block Copolymers	295
19.4.4 Dynamics of Polymer Adsorption	296
19.5 Summary and Future Challenges	298
 20 Morphology Development during Melt Processing of Immiscible Polymer Blends	 301
<i>Shin Horiuchi, Kazuo Nakayama</i>	
20.1 Introduction	301
20.2 Drop Breakup and Coalescence in Polymer Blends	302
20.2.1 Morphology Development during the Initial Stages of Blending	302
20.2.2 Breakup/Coalescence Equilibrium	303
20.2.3 Compatibilization-Suppression of Coalescence	305
20.3 Effect of Shear Flow on the Phase Behavior	308
20.4 Ternary Blends-Manipulation of Phase Formation	310
20.4.1 Prediction of Phase Formation in Non-Reactive Ternary Blends	310
20.4.2 Conversion of Phase Formation by Addition of a Di-block Copolymer	312
20.4.3 Manipulation of the Phase Formation by Interfacial Chemical Reaction	313
20.5 Summary	317
 21 Electronic Structure of Conductive and Conjugated Polymers	 319
<i>Yoshikazu Tanabe</i>	
21.1 Intramolecular Electronic State	319
21.1.1 π -Conjugated Polymers	319
21.1.2 σ -Conjugated Polymers	333
21.2 Intermolecular Charge Transport	335
21.3 Metallic Conduction	341

22 Organic Electroluminescent Devices 345*Noriyuki Takada, Shogo Saito*

22.1	Introduction	345
22.2	Principle and Structures of Electroluminescent Devices	345
22.3	Materials for EL Devices	346
22.4	Rational Selection of Organic Materials for Multilayer EL Devices	347
22.5	Effects of Dopant Molecules on EL Characteristics	349
22.6	Confinement of Excitons within the EML-a Device of Molecular Size	351
22.7	Size Effects in Organic EL Devices	353
22.8	Strongly Directed Emission from Controlled-Spontaneous-Emission EL Devices	355
22.9	Laser Action from Organic Thin Films	360
22.10	Conclusions	361

23 Optical and Electrical Properties of C₆₀, C₇₀, Nanotubes and Endohedral Fullerenes 363*Said Kazaoui, Nobutsugu Minami*

23.1	Introduction	363
23.2	C ₆₀ and C ₇₀ Fullerenes	364
	23.2.1 Molecular Geometry and Electronic Structure of C ₆₀ . .	364
	23.2.2 Properties of C ₆₀ Solids	366
23.3	Intermolecular Charge-Transfer States in C ₆₀ and C ₇₀ Solids . .	368
	23.3.1 Evidence for Intermolecular Charge-Transfer States . . .	368
	23.3.2 Dynamic Behavior of Excited States in Solid Fullerenes .	371
	23.3.3 Photocarrier Generation Dynamics in Solid Fullerenes .	373
23.4	Applications	373
	23.4.1 Xerographic Photoreceptors	373
	23.4.2 Photovoltaic Devices	376
23.5	Endohedral Fullerenes	379
	23.5.1 Definition	379
	23.5.2 Electronic Structure and Properties	379
23.6	Electrical and Optical Properties of Carbon Nanotubes	381
	23.6.1 Definition and Electronic Structure of Nanotubes	382
	23.6.2 Production, Purification and Elaboration Methods	384
	23.6.3 Experimental Characterization of NT	384
23.7	Conclusions and Perspectives	387
