

Contents

1	Classical Methods of Approximation	1
1.1	Introduction	1
1.2	Classical Filter Theory	2
1.3	Types of Approximation	4
1.4	Butterworth Approximation	9
1.4.1	Example 1.1	14
1.4.2	Example 1.2	17
1.5	Chebyshev Approximation	18
1.5.1	Example 1.3	22
1.6	Inverse Chebyshev Approximation	23
1.6.1	Example 1.4	26
1.7	Elliptic Approximation	27
1.8	Least Squares Approximation	31
1.9	Analog Frequency Transformations	34
1.10	Highpass Filter	34
1.10.1	Example 1.5	35
1.11	Bandpass Filter	36
1.11.1	Example 1.6	37
1.12	Bandstop Filter	38
1.12.1	Example 1.7	40
1.13	1-D Digital Filters	41
1.14	Theory of Sampling	41
1.15	Design Procedures	49
1.16	Impulse Invariant Transformation	50
1.17	Bilinear Transformation	54
1.17.1	Example 1.8	56
1.17.2	Digital Spectral Transformation	60
1.17.3	Example 1.9	60
1.17.4	Example 1.10	64
1.18	Computer-Aided Optimization	64
1.19	Conclusion	65

2	Magnitude and Delay of I-D Filters	71
2.1	Introduction	71
2.2	Properties of an IIR Transfer Function	72
2.3	Maximally Flat Group Delay Filters	74
2.4	Simultaneous Approximation of Magnitude and Group Delay . .	83
2.4.1	Method 2.1: Nonlinear Optimization	83
2.4.2	Method 2.2 : Use of Mirror Image Polynomial	85
2.4.3	Method 2.3 : Maximally Flat Magnitude and Group Delay in the Passband	87
2.4.4	Design Theory	91
2.4.5	Example 2.1	94
2.4.6	Extension for an Equiripple Stopband Response	95
2.4.7	Remez Algorithm	97
2.4.8	Example 2.2	98
2.5	Design of Pulse Shaping Filters	99
2.5.1	Example 2.3	101
2.5.2	Method 2.4: Use of Allpass Sections in Parallel	104
2.5.3	Method 2.5: Use of Singular Value Decomposition	110
2.5.4	Example 2.4	113
2.5.5	Method 2.6: Application of Linear Programming	113
2.5.6	Method 2.7: Theory of Commensurate Distributed Net- works	117
2.5.7	Equidistant Linear Phase Approximation	121
2.5.8	Method 2.8: Theory of Eigen Filters	122
2.5.9	Example 2.5	127
2.6	Conclusion	129
3	Magnitude of 2-D Filters	137
3.1	Introduction	137
3.2	Filters with Rectangular Passbands	138
3.3	Design of Fan Filters	151
3.3.1	Method 3.1	152
3.3.2	Example 3.1	154
3.3.3	Design of Fan Filters using Method 3.2	165
3.3.4	Design Procedure	166
3.3.5	Example 3.2	167
3.3.6	Method 3.3	168
3.3.7	Example 3.3	170
3.4	Design of Circularly Symmetric Filters	173
3.4.1	Survey of the literature	173
3.4.2	Design Procedures	175
3.5	Conclusion	182

4	Magnitude and Delay of 2-D Filters	187
4.1	Introduction	187
4.2	Design using Nonlinear Programming	188
4.2.1	Statement of the problem	188
4.2.2	Stability conditions	190
4.2.3	Design Examples	196
4.3	Design Using Linear Programming	213
4.4	Design Using Singular Value Decomposition	216
4.5	Chebyshev Approximation Theory	217
4.6	Design Using Digital Spectral Transformation	225
4.6.1	Example 4.5	233
4.6.2	Example 4.6	240
4.7	Conclusion	241
	Index	249

Magnitude and Delay Approximation of 1-D and 2-D
Digital Filters

Shenoi, B.A.

1999, XIII, 250 p., Hardcover

ISBN: 978-3-540-64161-2
