Part I Introduction – Overview , Technical Papers	1
1 Landslide Hazard – A Conceptual Approach in Risk Viewpoint	3
1.1 Introduction	3
1.2 The Hazard's Characteristics	5
1.2.1 Location	5
1.2.2 Magnitude	6
1.2.3 Measuring Speeds	8
1.2.4 The Prompting Concept	10
1.2.5 Occurrence	11
1.3 Vulnerability to Landslides	12
1.4 The Risk	14
1.4.1 Component Defining Landslide Risk	14
1.4.2 Mapping over Extended Areas	14
1.4.3 Mapping on a Regional Basis	16
1.5 Conclusion	17
References	17
2 Flood Hazard Assessment and Mitigation	19
2.1 Introduction	19
2.2 General Characteristics of Floods	20
2.2.1 A Tentative Typology of European Flood Hazards	22
2.3 Current Approach for Estimation of Flood Risk	23
2.3.1 Regional Floods Frequency Analysis	24
2.3.2 Flood Risk Estimation by Using Rainfall-Runoff Models	24
2.4 Defence Against Floods	29
2.4.1 Flood Control Measures	29
2.4.2 Flood Proofing	31
2.4.3 Planning Control	32
2.4.4 Emergency Plans	32
2.4.5 Flood Forecasting and Warning Systems	32
References	37
3 The Recognition of Landslides	39
3.1 Introduction	39
3.2 Classification of Landslides Proposed by the TESLEC Project	39
References	44

4	Climate Change Impact on Frequency and Distribution of Natural Extreme Events: an Overview	45
4.1	Introduction	45
4.1.1	External Forcings	47
4.1.2	Internal Forcings	49
4.1.3	Climate of the Last 1000 Years	50
4.2	Impacts of Climate Change	52
4.2.1	Impacts on Water Cycle	53
4.2.2	Impacts on Extreme Events	54
4.2.3	Impacts on Slopes	56
4.3	Case Studies	56
4.3.1	Landslides	57
4.3.2	Floods and Droughts	58
4.3.3	Climatic Change and Impacts in the Po River Basin Between 1450 and 1650	60
4.4	Conclusions	63
