# Contents in Brief

## Section 1 Microbial Systems, Both Prokaryote and Eukaryote

1	Virus Assembly and Morphogenesis	
	PETER STOCKLEY and NICOLA STONEHOUSE . . . . .	3
2	Spatial and Temporal Control of Gene Expression in Prokaryotes	
	ADAM DRIKS . . . . .	21
3	Multicellular Development in the Myxobacteria <i>Myxococcus xanthus</i> and <i>Stigmatella aurantiaca</i>	
	EUGENE W. CRAWFORD JR. and LAWRENCE J. SHIMKETS . . . . .	35
4	Cell Type Determination in Yeast	
	XIN BI and JAMES R. BROACH . . . . .	49
5	Genetic and Environmental Influence on Development of the Filamentous Fungus <i>Neurospora crassa</i>	
	ODED YARDEN and VINCENZO E. A. RUSSO . . . . .	67
6	Cell-Cell Communication in <i>Dictyostelium</i>	
	PAULINE SCHAAP and JEFFREY WILLIAMS . . . . .	83
7	The Cell Division Cycle in <i>Aspergillus nidulans</i>	
	JOHN DOONAN . . . . .	99

## Section 2 Plants

8	Flowering Plant Embryogenesis	
	CASPER VROEMEN and SACCO DE VRIES . . . . .	121
9	Root Development in <i>Arabidopsis</i>	
	LIAM DOLAN . . . . .	133
10	Leaf Development	
	CARLO POZZI, KAI J. MÜLLER, WOLFGANG ROHDE, and FRANCESCO SALAMINI . . . . .	145
11	Floral Development: Genetic Views and Molecular News	
	BRENDAN DAVIES, HANS SOMMER, and ZSUZSANNA SCHWARZ-SOMMER . . . . .	167
12	Genetic Control of Endosperm Development	
	STEPHEN SLOCOMBE, MONIKA MAITZ, GREGORIO HUEROS, HEINZ-ALBERT BECKER, GUO YAN, MARTIN MÜLLER, SERENA VAROTTO, GERALDINA SANTANDREA, and RICHARD D. THOMPSON . . . . .	185
13	Environmental Light Signals and the Development of <i>Arabidopsis</i>	
	GIORGIO MORELLI and IDA RUBERTI . . . . .	199
14	Plant-Microorganism Symbiosis	
	J. ALLAN DOWNIE and NICHOLAS J. BREWIN . . . . .	211

**Section 3 Animals**

15	<i>Caenorhabditis elegans</i> : Embryonic Axis Formation; Signalling in Early Development CRAIG P. HUNTER .....	233
16	Cell Fate Determination in <i>Caenorhabditis elegans</i> MICHAEL KRAUSE .....	251
17	Morphogenesis and Organogenesis in <i>Caenorhabditis elegans</i> LOIS G. EDGAR .....	269
18	The Regulation of Cell and Growth Cone Migrations During the Development of <i>Caenorhabditis elegans</i> WILLIAM G. WADSWORTH .....	299
19	Formation of Embryonic Axes and Blastoderm Pattern in <i>Drosophila</i> MARTIN KLINGLER and DIETHARD TAUTZ .....	311
20	Early Neurogenesis in <i>Drosophila</i> JOSÉ A. CAMPOS-ORTEGA .....	331
21	<i>Drosophila</i> : Imaginal Disk Development: Patterning the Adult Fly SETH S. BLAIR .....	347
22	Insertional Mutagenesis in Zebrafish ADAM AMSTERDAM and NANCY HOPKINS .....	371
23	Spatial and Temporal Control of Maternal Message Utilization DAVOR SOLTER and BARBARA B. KNOWLES .....	389
24	DNA Methylation PETER W. LAIRD .....	395
25	X-Chromosome Inactivation JEANNIE T. LEE .....	407
26	Genomic Imprinting: Its Role in Development and Disease JOHANNA A. JOYCE and ANNE C. FERGUSON-SMITH .....	421
27	Myogenesis MICHAEL A. RUDNICKI .....	435
28	Neurotrophins in Development of the Nervous System ERNEST ARENAS and PATRIK ERNFORS .....	447
29	Olfactory Receptor Gene Regulation ANDREW CHESSE .....	463
30	Genetically Modified Mice as Tools for Cancer Research ERWIN F. WAGNER and ZHAO-QI WANG .....	471
31	Circadian Timing in Animals UELI SCHIBLER and DANIEL J. LAVERY .....	487
32	Polarity in Biological Systems DAVID J. COVE, IAN A. HOPE, and RALPH S. QUATRANO .....	507
	Glossary .....	525
	Subject Index .....	537

## Section 1 Microbial Systems, Both Prokaryote and Eukaryote

<b>1</b>	<b>Virus Assembly and Morphogenesis</b>	
	PETER G. STOCKLEY and NICOLA J. STONEHOUSE . . . . .	3
1.1	Introduction . . . . .	3
1.1.1	Viruses as Model Systems for Development . . . . .	3
1.1.2	Self-Assembling Systems: Molecular Ontogeny? . . . . .	3
1.1.3	General Principles of Virus Organization . . . . .	4
1.2	Molecular Mechanisms of Viral Assembly . . . . .	6
1.2.1	Tobacco Mosaic Virus, a Helical Rod . . . . .	8
1.2.2	Simple Viral Shells Based on Icosahedral Symmetry . . . . .	9
1.2.3	T4 and $\phi$ 29 Bacteriophages, Examples of Complex Viruses . . . . .	14
1.3	Evolutionary Considerations . . . . .	18
1.4	Outlook . . . . .	19
1.5	Summary . . . . .	19
	References . . . . .	20
<b>2</b>	<b>Spatial and Temporal Control of Gene Expression in Prokaryotes</b>	
	ADAM DRIKS . . . . .	21
2.1	Introduction . . . . .	21
2.2	Temporal Control of Flagellar Gene Expression and Spatial Control of the Cell Cycle in <i>C. crescentus</i> . . . . .	23
2.2.1	Polar Structures in <i>C. crescentus</i> : the Flagellum . . . . .	23
2.2.2	The Hierarchical Organization of the Flagellar Genes . . . . .	24
2.2.3	Morphological Coupling of Gene Expression and Flagellar Assembly . . . . .	25
2.2.4	Cell-Cycle Control . . . . .	26
2.3	Temporal Control of Gene Expression During Spore Formation in <i>B. subtilis</i> . . . . .	27
2.3.1	Spore Formation by <i>B. subtilis</i> . . . . .	27
2.3.2	Early Gene Regulatory Events in Sporulation . . . . .	27
2.3.3	The Forespore Genetic Program . . . . .	28
2.3.4	The Mother Cell Genetic Program . . . . .	28
2.4	Spatial Control of Gene Expression During Spore Formation in <i>B. subtilis</i> . . . . .	29
2.4.1	The Restriction of $\sigma^F$ Activity to the Forespore . . . . .	29
2.4.2	The Activation of Mother Cell Gene Expression by Events in the Forespore . . . . .	30
2.4.3	Postengulfment Signal Transduction Between Compartments . . .	30

2.5	Themes in Temporal and Spatial Control: Sequential Activation of Genes and Morphogenetic Coupling .....	31
2.6	Outlook .....	31
2.7	Summary .....	32
	References .....	32
<b>3</b>	<b>Multicellular Development in the Myxobacteria <i>Myxococcus xanthus</i> and <i>Stigmatella aurantiaca</i></b>	
	EUGENE W. CRAWFORD JR. and LAWRENCE J. SHIMKETS .....	35
3.1	Introduction .....	35
3.2	The Developmental Program of <i>Myxococcus xanthus</i> .....	35
3.2.1	Rippling .....	36
3.2.2	Aggregation and Fruiting Body Formation .....	37
3.2.3	Sporulation .....	40
3.3	The Fundamental Choice to Grow or Develop .....	40
3.3.1	The Cellular Starvation Pathway .....	41
3.3.2	The Population Starvation Pathway .....	41
3.3.3	Arrest of Growth .....	42
3.4	Development in <i>Stigmatella aurantiaca</i> .....	43
3.4.1	Fruiting Body Formation in <i>Stigmatella aurantiaca</i> .....	43
3.4.2	Uncoupling Sporulation and Fruiting Body Formation .....	44
3.4.3	Pheromone Production by <i>S. aurantiaca</i> .....	44
3.5	Outlook .....	45
3.6	Summary .....	45
	References .....	45
<b>4</b>	<b>Cell Type Determination in Yeast</b>	
	XIN BI and JAMES R. BROACH .....	49
4.1	Introduction .....	49
4.2	Phenotypic, Genetic and Molecular Basis of Different Cell Types .....	52
4.2.1	Mating Factors and Their Receptors .....	52
4.2.2	Regulatory Circuitry for Control of Cell Type .....	53
4.2.3	Diploids: Sporulation and Pseudohyphal Growth .....	54
4.3	Cell Type Switching .....	55
4.3.1	HO Regulatory Elements .....	56
4.3.2	Cell Cycle Regulation of <i>HO</i> .....	56
4.3.3	Mother-Daughter Regulation of <i>HO</i> .....	57
4.3.3.1	Asymmetric Localization of <i>ASH1</i> mRNA .....	58
4.3.3.2	Asymmetric Distribution of Ash 1p Depends on the Actin Cytoskeleton .....	58
4.3.4	Donor Preference in Mating Type Switching .....	59
4.3.4.1	A <i>cis</i> -Acting Elements Governs Donor Preference .....	59
4.3.4.2	<i>trans</i> -Acting Factors Involved in Donor Preference .....	61
4.3.4.3	Mechanism of Donor Preference .....	62
4.3.5	Transcriptional Silencing .....	62
4.4	Outlook .....	64
4.5	Summary .....	64
	References .....	64

<b>5</b>	<b>Genetic and Environmental Influence on Development of the Filamentous Fungus <i>Neurospora crassa</i></b>	
	ODED YARDEN and VINCENZO E. A. RUSSO	67
5.1	Introduction	67
5.2	<i>Neurospora crassa</i> as a Model for Filamentous Fungi	67
5.2.1	The Life Cycle of <i>Neurospora crassa</i>	68
5.2.2	Microbiological and Genetic Techniques	69
5.3	Morphological Studies	70
5.3.1	From Spore to Mycelium	70
5.3.2	From Mycelium to Conidia	70
5.3.3	The Sexual Cycle	72
5.4	Genetic Influence on Development	74
5.4.1	Developmental Genes of <i>Neurospora</i>	74
5.4.2	Gene Regulation During Conidiation	75
5.4.3	Protein Phosphorylation in Developmental Processes	75
5.5	Epigenetic Regulation of Fungal Gene Expression	76
5.6	Environmental Influence on Development	77
5.6.1	Nutrient Source	78
5.6.2	Temperature	78
5.6.3	Light	78
5.7	Outlook	79
5.8	Summary	80
	References	80
<b>6</b>	<b>Cell-Cell Communication in <i>Dictyostelium</i></b>	
	PAULINE SCHAAP and JEFFREY WILLIAMS	83
6.1	Introduction	83
6.1.1	Characteristics of the Growing Cell and of Stalk and Spore Cells	83
6.1.2	Outline of the Developmental Cycle	84
6.2	The Signals that Initiate and Direct Aggregation	86
6.2.1	Preparing for Development: Cell Density Signalling	86
6.2.2	The Generation of Oscillatory cAMP Signals	87
6.2.3	Cellular Responses to cAMP Signals	88
6.3	Signals that Direct and Pattern Formation	90
6.3.1	cAMP Signalling and Cell Movement Within the Slug	90
6.3.2	cAMP and Prespore Differentiation	90
6.3.3	DIF and Prestalk Differentiation	91
6.3.4	Cross-Talk Between the DIF and cAMP Signalling Pathways	92
6.3.5	Prestalk Cell Heterogeneity and the Signals that Direct Morphogenetic Cell Movement in the Multicellular Stages	92
6.4	Terminal Differentiation and Spore Germination	94
6.4.1	The Control of Culmination by Ammonia	94
6.4.2	Activation of PKA	94
6.4.3	Regulation of Spore Germination	95
6.5	Outlook	95
6.6	Summary	96
	References	96

<b>7</b>	<b>The Cell Division Cycle in <i>Aspergillus nidulans</i></b>	
	JOHN DOONAN . . . . .	99
7.1	Introduction . . . . .	99
7.2	Common Features of the Eukaryotic Cell Division Cycle . . . . .	99
7.3.1	The Cell Division Cycle in <i>Aspergillus</i> . . . . .	100
7.3.2	Mitosis in <i>Aspergillus</i> . . . . .	101
7.4	Studying the Cell Cycle in <i>Aspergillus</i> : Methodology . . . . .	103
7.4.1	Observing Mitosis . . . . .	103
7.4.2	Genetic Tools for Looking at the Cell Division Cycle . . . . .	105
7.4.3	DNA-Mediated Transformation as a Tool to Manipulate Gene Expression . . . . .	106
7.4.4	Protein Surveillance: Epitope Tagging and Green Fluorescent Protein . . . . .	107
7.5	Different Classes of Genes Required for Cell Division . . . . .	107
7.5.1	Never in Mitosis Mutants . . . . .	107
7.5.2	Blocked in Mitosis Mutants . . . . .	109
7.5.3	Septation-Defective Mutants . . . . .	111
7.5.4	Genome Integrity Mutants . . . . .	111
7.6	Regulatory Circuits Controlling the Nuclear Division Cycle . . . .	111
7.6.1	Entry into Mitosis . . . . .	112
7.6.2	Coupling Mitosis and the Completion of S-Phase . . . . .	112
7.6.3	The Replication Complex and Preventing Mitosis Occurring in G1/S . . . . .	113
7.6.4	Completion of Mitosis and Septum Formation . . . . .	113
7.7	Outlook and Summary . . . . .	114
	References . . . . .	114

## Section 2 Plants

<b>8</b>	<b>Flowering Plant Embryogenesis</b>	
	CASPER VROEMEN and SACCO DE VRIES . . . . .	121
8.1	Introduction . . . . .	121
8.2	Pattern Formation, Cell Differentiation and Organ Development in the Plant Embryo . . . . .	121
8.2.1	The Apical-Basal Pattern . . . . .	122
8.2.2	The Orientation of the Apical-Basal Embryo Axis Is not Fixed Before Fertilization, and May Be Influenced by Surrounding Maternal Tissue . . . . .	124
8.2.3	The Establishment of the Apical-Basal Pattern Proceeds in Steps and May Require Signalling Between Early Embryonic Regions . .	124
8.2.4	The Radial Pattern . . . . .	125
8.2.5	The Establishment of the Preliminary Radial Pattern Proceeds from Outside to Inside and Requires the Proper Separation of Tissue Layers . . . . .	125
8.2.6	The Elaboration of the Preliminary Radial Pattern Requires Fate-Specifying and Cell-Division Genes . . . . .	126
8.2.7	The Shoot Apical Meristem . . . . .	126
8.2.8	Genes Involved in the Establishment and Partitioning of the Shoot Apical Meristem . . . . .	127

8.2.9	The Root Meristem	128
8.3	The Hormone Auxin Seems Involved in Pattern and Organ Formation	129
8.4	The Initiation and Early Division Pattern of Plant Embryogenesis Are Flexible	129
8.5	Genes Controlling the Initiation of Somatic Embryos	130
8.6	Outlook	131
8.7	Summary	131
	References	131
<b>9</b>	<b>Root Development in <i>Arabidopsis</i></b>	
	LIAM DOLAN	133
9.1	Introduction	133
9.2	Two Meristems Are the Product of Embryogenesis in <i>Arabidopsis</i>	133
9.3	The Cellular Organization of the Primary <i>Arabidopsis</i> Root	133
9.4	Tissues of the Root Are Derived from a Set of Initial Cells in the Meristem	135
9.5	Laser Microsurgical Experiments Indicate that Positional Information in the Cell Wall Is a Primary Factor in the Determination of Cell Fate	135
9.6	Central Cells Negatively Regulate the Differentiation of Initial Cells	136
9.7	Initial Cell Fate Is Specified by Positional Information	136
9.8	Positional Information Directs Cell Fate in the Epidermis	137
9.9	Positional Information Is Organized with Defined Spatial Boundaries	137
9.10	SCARECROW and SHORT ROOT Are Required for the Development of Radial Pattern	137
9.11	SCR and SHR Activity Are Required for the Division of the Cortical Daughter Cell in the Primary Root	138
9.12	TRANSPARENT TESTA GLABRA and CAPRICE Specify Fate in the Epidermis	139
9.13	Lateral Root Development Requires Auxin	139
9.14	Auxin Is Required Throughout the Development of Lateral Roots	140
9.15	Environmental Factors Modulate Lateral Root Development	141
9.16	Nitrate Is a Signalling Molecule Involved in the Root Response to Local Elevated Levels of the Ion	141
9.17	Outlook	141
9.18	Summary	143
	References	143
<b>10</b>	<b>Leaf Development</b>	
	CARLO POZZI, KAI J. MÜLLER, WOLFGANG ROHDE, and FRANCESCO SALAMINI	145
10.1	Introduction	145
10.2	Leaf Morphology	146
10.3	Leaf Development and its Genetics	146

10.3.1	Stages of Leaf Development .....	146
10.3.2	Primordium Initiation .....	147
10.3.2.1	Position .....	147
10.3.2.2	Meristem Zonation and Leaf Primordium Initiation .....	148
10.3.3	Maturation of Leaf Primordia .....	150
10.3.3.1	The Maturation Schedule .....	150
10.3.3.2	The Role of Cell Division .....	153
10.3.4	Developmental Aspects and Symmetries of the Dicotyledonous Primordium and Leaf .....	153
10.3.5	Leaf Expansion and Regional Cell Differentiation .....	154
10.3.5.1	Leaf Expansion .....	154
10.3.5.2	Epidermis .....	155
10.4	Molecular Aspects of Leaf Development .....	157
10.4.1	Homeobox Genes .....	157
10.4.2	Homeobox Gene Redundancy .....	159
10.4.3	Compound Leaves .....	160
10.5	Summary and Outlook .....	163
	References .....	164

14.4	Infection .....	223
14.4.1	Infection Thread Development .....	223
14.4.2	Bacterial Release .....	224
14.5	Nodule Organogenesis .....	224
14.5.1	Tissue and Cell Development .....	224
14.5.2	Differentiation of the Symbiosome Compartment .....	226
14.6	Summary and Outlook .....	228
	References .....	229

### Section 3 Animals

15	<b><i>Caenorhabditis elegans</i>: Embryonic Axis Formation; Signalling in Early Development</b>	
	CRAIG P. HUNTER .....	233
15.1	Introduction .....	233
15.2	Overview of Axis Formation and Early Embryogenesis .....	234
15.2.1	Fertilization and the First Mitotic Division .....	234
15.2.2	The Three Embryonic Axes .....	235
15.2.3	Cell Signals and Asymmetrically Segregated Molecules .....	235
15.2.4	The Gene Activities That Pattern the Early Embryo Specify Blastomere Identity .....	236
15.3	Establishing Anterior-Posterior Polarity in the Zygote .....	236
15.3.1	The Sperm Entry Position Determines the Posterior Pole .....	236
15.3.2	Cytoplasmic Reorganization Is Dependent on Microfilaments ...	237
15.3.3	Gene Activities Required for Embryonic Polarity .....	238
15.3.3.1	Spindle Orientation in the 2-Cell Embryo .....	238
15.3.3.2	The PAR Proteins Are Asymmetrically Localized .....	239
15.4	Specifying Posterior Blastomere Fates .....	240
15.4.1	SKN-1 and PAL-1 Are Posteriorly Localized Blastomere Specification Proteins .....	240
15.4.2	<i>skn-1</i> Regulates <i>pal-1</i> Activity in EMS But Not in P <sub>2</sub> .....	240
15.4.3	PIE-1 Protein Localizes to the Germ Lineage and Its Activity Inhibits Transcription .....	240
15.4.4	Linking Asymmetric Cleavage to Differential Gene Activity ...	242
15.5	Cell Interactions That Specify Blastomere Identity: Polarizing Cell Signals Revealed .....	242
15.5.1	The Polarity of the Dorsal-Ventral Axis Is Specified by Cell Signals .....	242
15.5.2	Signal No. 1: A Signal from P <sub>2</sub> Specifies the AB.p Lineage .....	242
15.5.3	Signal No. 2: Left-Right Polarity Can Be Reversed by Exchanging Cell Positions .....	243

15.5.4	GLP-1 Is a Receptor for Both the P <sub>2</sub> Signal and the MS Signal . .	243
15.5.5	APX-1 Is the P <sub>2</sub> Ligand . . . . .	243
15.5.6	Signal No. 3: The P <sub>2</sub> Blastomere Also Polarizes the EMS Blastomere . . . . .	244
15.5.7	Mutations Defective in P <sub>2</sub> EMS Interactions Identify Conserved <i>wnt</i> Pathway Genes . . . . .	245
15.6	Controlling the Expression Patterns of Blastomere Specification Proteins . . . . .	246
15.6.1	Spatial and Temporal Control of PAL-1 Translation . . . . .	246
15.6.2	Localizing Other Blastomere Specification Proteins . . . . .	247
15.6.3	Maternal Control of Embryonic Patterning Is Non-Hierarchical in <i>C. elegans</i> . . . . .	248
15.7	Outlook . . . . .	249
15.8	Summary . . . . .	249
	References . . . . .	249
<b>16</b>	<b>Cell Fate Determination in <i>Caenorhabditis elegans</i></b>	
	MICHAEL KRAUSE . . . . .	251
