

# Contents

<b>1. Introduction</b>	1
1.1 Computer Simulation as a Tool for Materials Science	1
1.2 Modeling of Natural Phenomena	2
<b>2. Ab Initio Methods</b>	7
2.1 Introduction	7
2.2 Electronic States of Many-Particle Systems	8
2.2.1 Quantum Mechanics of Identical Particles	8
2.2.2 The Hartree–Fock Approximation	11
2.2.3 Density Functional Theory	18
2.2.4 Periodic Systems	27
2.2.5 Group Theory	32
2.2.6 LCAO, OPW and Mixed-Basis Approaches	39
2.2.7 Pseudopotential Approach	46
2.2.8 APW Method	49
2.2.9 KKR, LMTO and ASW Methods	52
2.2.10 Some General Remarks	55
2.2.11 Ab Initio $O(N)$ and Related Methods	58
2.3 Perturbation and Linear Response	64
2.3.1 Effective-Mass Tensor	64
2.3.2 Dielectric Response	66
2.3.3 Magnetic Susceptibility	69
2.3.4 Chemical Shift	71
2.3.5 Phonon Spectrum	73
2.3.6 Electrical Conductivity	75
2.4 Ab Initio Molecular Dynamics	77
2.4.1 Car–Parrinello Method	78
2.4.2 Steepest Descent and Conjugate Gradient Methods	80
2.4.3 Formulation with Plane Wave Basis	81
2.4.4 Formulation with Other Bases	83
2.5 Applications	85
2.5.1 Application to Fullerene Systems	85
2.5.2 Application to Point Defects in Crystals	93
2.5.3 Application to Other Systems	95
2.5.4 Coherent Potential Approximation	98

2.6	Beyond the Born–Oppenheimer Approximation .....	100
2.7	Electron Correlations Beyond the LDA .....	105
2.7.1	Generalized Gradient Approximation .....	106
2.7.2	Self-Interaction Correction .....	107
2.7.3	GW Approximation .....	109
2.7.4	Exchange and Coulomb Holes .....	115
2.7.5	Optimized Effective Potential Method .....	116
2.7.6	Time-Dependent Density Functional Theory .....	118
2.7.7	Inclusion of Ladder Diagrams .....	119
2.7.8	Further Remarks: Cusp Condition, etc. ....	122
	References .....	123
<b>3.</b>	<b>Tight-Binding Methods .....</b>	<b>139</b>
3.1	Introduction .....	139
3.2	Tight-Binding Formalism .....	140
3.2.1	Tight-Binding Parametrization .....	141
3.2.2	Calculation of the Matrix Elements .....	143
3.2.3	Total Energy .....	144
3.2.4	Forces .....	145
3.3	Methods to Solve the Schrödinger Equation for Large Systems .....	146
3.3.1	The Density Matrix $O(N)$ Method .....	147
3.3.2	The Recursion Method .....	151
3.4	Self-Consistent Tight-Binding Formalism .....	153
3.4.1	Parametrization of the Coulomb Integral $\mathcal{U}$ .....	157
3.5	Applications to Fullerenes, Silicon and Transition-Metal Clusters .....	158
3.5.1	Fullerene Collisions .....	159
3.5.2	$C_{240}$ Doughnuts and Their Vibrational Properties ....	159
3.5.3	IR Spectra of $C_{60}$ and $C_{60}$ Dimers .....	160
3.5.4	Simulated Annealing of Small Silicon Clusters .....	164
3.5.5	Titanium and Copper Clusters .....	165
3.6	Conclusions .....	167
	References .....	168
<b>4.</b>	<b>Empirical Methods and Coarse-Graining .....</b>	<b>171</b>
4.1	Introduction .....	171
4.2	Reduction to Classical Potentials .....	172
4.2.1	Polar Systems .....	173
4.2.2	Van der Waals Potential .....	175
4.2.3	Potential for Covalent Bonds .....	177
4.2.4	Embedded-Atom Potential .....	179
4.3	The Connolly–Williams Approximation .....	181
4.3.1	Lattice Gas Model .....	181
4.3.2	The Connolly–Williams Approximation .....	182

4.4	Potential Renormalization .....	184
4.4.1	Basic Idea: Two-Step Renormalization Scheme .....	184
4.4.2	The First Step .....	186
4.4.3	The Second Step .....	188
4.4.4	Application to Si .....	190
	References .....	193
<b>5.</b>	<b>Monte Carlo Methods .....</b>	<b>195</b>
5.1	Introduction .....	195
5.2	Basis of the Monte Carlo Method .....	196
5.2.1	Stochastic Processes .....	197
5.2.2	Markov Process .....	199
5.2.3	Ergodicity .....	202
5.3	Algorithms for Monte Carlo Simulation .....	206
5.3.1	Random Numbers .....	206
5.3.2	Simple Sampling Technique .....	208
5.3.3	Importance Sampling Technique .....	212
5.3.4	General Comments on Dynamic Models .....	214
5.4	Applications .....	216
5.4.1	Systems of Classical Particles .....	216
5.4.2	Modified Monte Carlo Techniques .....	219
5.4.3	Percolation .....	223
5.4.4	Polymer Systems .....	225
5.4.5	Classical Spin Systems .....	230
5.4.6	Nucleation .....	243
5.4.7	Crystal Growth .....	247
5.4.8	Fractal Systems .....	251
	References .....	263
<b>6.</b>	<b>Quantum Monte Carlo (QMC) Methods .....</b>	<b>271</b>
6.1	Introduction .....	271
6.2	Variational Monte Carlo (VMC) Method .....	271
6.3	Diffusion Monte Carlo (DMC) Method .....	274
6.4	Path-Integral Monte Carlo (PIMC) Method .....	278
6.5	Quantum Spin Models .....	281
6.6	Other Quantum Monte Carlo Methods .....	282
	References .....	282
<b>Appendix .....</b>		
<b>A.</b>	<b>Molecular Dynamics and Mechanical Properties .....</b>	<b>285</b>
A.1	Time Evolution of Atomic Positions .....	287
A.2	Acceleration of Force Calculations .....	291
A.2.1	Particle–Mesh Method .....	291
A.2.2	The Greengard–Rockhlin Method .....	292
	References .....	296

<b>B. Vibrational Properties</b> .....	297
References .....	300
<b>C. Calculation of the Ewald Sum</b> .....	301
References .....	304
<b>D. Optimization Methods Used in Materials Science</b> .....	305
D.1 Conjugate-Gradient Minimization .....	305
D.2 Broyden's Method .....	307
D.3 SA and GA as Global Optimization Methods .....	309
D.3.1 Simulated Annealing (SA) .....	309
D.3.2 Genetic Algorithm (GA) .....	310
References .....	312
<b>Index</b> .....	315

Computational Materials Science  
From Ab Initio to Monte Carlo Methods  
Ohno, K.; Esfarjani, K.; Kawazoe, Y.  
1999, X, 329 p., Hardcover  
ISBN: 978-3-540-63961-9
