

Contents

1. Introduction	1
2. Molecular Beams and Cluster Nucleation	5
2.1 Molecular Beams	5
2.1.1 Continuous Effusive Beams	6
2.1.2 Continuous Supersonic Beams	9
2.1.3 Pulsed Beams	18
2.2 Nucleation and Aggregation Processes	20
2.2.1 Classical Theory	20
2.2.2 Homogeneous Nucleation by Monomer Addition	21
2.2.3 Homogeneous Nucleation by Aggregation	26
2.2.4 Nucleation of Clusters in Beams	27
2.2.5 Semi-empirical Approach to Clustering in Free Jets	30
3. Cluster Sources	35
3.1 Vaporization Methods	35
3.1.1 Joule Heating	36
3.1.2 Plasma Generation for Cluster Production	42
3.1.3 Laser Vaporization	42
3.1.4 Glow and Arc Discharges	47
3.2 Continuous Sources	52
3.2.1 Effusive Joule-Heated Gas Aggregation Sources	52
3.2.2 Magnetron Plasma Sources	61
3.2.3 Supersonic Sources	62
3.3 Pulsed Sources	70
3.3.1 Pulsed Valves	70
3.3.2 Laser Vaporization Sources	77
3.3.3 Arc Pulsed Sources	83
4. Characterization and Manipulation of Cluster Beams	91
4.1 Mass Spectrometry	91
4.1.1 Quadrupole Mass Spectrometry	91
4.1.2 Time-of-Flight Mass Spectrometry	96
4.1.3 Retarding Potential Mass Spectrometry	107

4.2	Detection Methods	109
4.2.1	Ionization of Clusters	109
4.2.2	Charged Cluster Detection	110
4.2.3	Cluster Beam Characterization	117
4.3	Cluster Selection and Manipulation	120
4.3.1	Size and Energy Selection	120
4.3.2	Quadrupole Filter	122
4.3.3	Separation of Gas Mixtures in Supersonic Beams	123
5.	Thin Film Deposition and Surface Modification by Cluster Beams	125
5.1	Kinetic Energy Regimes	128
5.2	Diffusion and Coalescence of Clusters on Surfaces	133
5.3	Low-Energy Deposition	142
5.3.1	Cluster Networks and Porous Films	143
5.3.2	Composite Nanocrystalline Materials	154
5.4	High-Energy Deposition	155
5.4.1	Implantation, Sputtering, Etching	155
5.4.2	Thin Film Formation	160
6.	Outlook and Perspectives	167
6.1	Cluster Beam Processing of Surfaces	168
6.2	Nanostructured Materials Synthesis	171
6.3	Perspectives	172
	Appendix	175
	References	179

Cluster Beam Synthesis of Nanostructured Materials

Milani, P.; Iannotta, S.

1999, VIII, 194 p., Hardcover

ISBN: 978-3-540-64370-8
