

TABLE OF CONTENTS

Chapter 1. THE EQUATIONS OF MOTION.

1. INTRODUCTION, THE EQUATIONS	1
2. SOME GENERAL PROPERTIES OF NAVIER-STOKES EQUATIONS.....	10
REFERENCES.....	22

Chapter 2. PRINCIPLES OF TURBULENT FLOW MODELING.

1. INTRODUCTION AND AVERAGING PROCEDURES.....	23
2. THE REYNOLDS-AVERAGED MEAN-FLOW EQUATIONS.....	46
3. THE CLOSURE PROBLEM.....	52
4. HOMOGENEOUS AND INHOMOGENEOUS FLOWS	64
5. THE EDDY-VISCOSITY CONCEPT.....	102
REFERENCES	132

Chapter 3. TWO-POINT HOMOGENEOUS TURBULENCE.

INTRODUCTION	143
1. HOMOGENEOUS TURBULENCE ; CORRELATIONS AND SPECTRA.....	143
2. THE DYNAMICS OF SECOND-ORDER CORRELATIONS.....	157
3. THEORY OF HOMOGENEOUS ISOTROPIC TURBULENCE	167
4. RAPID DISTORSION THEORY.....	196
REFERENCES	222

Chapter 4. SECOND-ORDER TURBULENCE MODELING.

1. REYNOLDS-STRESS MODELING.....	229
2. THE TRANSFER TERM.....	238
3. INHOMOGENEOUS FLOW	261
4. NON LINEAR EV AND ARS MODELS.....	273
5. INTERMITTENCY MODELING	285
REFERENCES	294

APPENDIX A. DEFINITION OF TURBULENCE MODELS	301
---	-----

Chapter 5. TURBULENT TWO-DIMENSIONAL SHEAR FLOWS.

1. INTRODUCTION.....	305
2. THIN FREE SHEAR LAYERS, CLASSIFICATION.....	306
3. ASYMPTOTICS OF WALL SHEAR LAYERS.....	316
4. CHANNEL AND PIPE FLOWS.....	330
5. ZERO-PRESSURE-GRADIENT BOUNDARY LAYERS.....	349
6. JETS.....	364
7. WAKES.....	425
REFERENCES.....	454

Chapter 6. COMPLEX EFFECTS IN TURBULENT FLOWS.

1. 2D BOUNDARY LAYERS IN PRESSURE GRADIENTS	471
2. TWO-DIMENSIONAL TURBULENT SEPARATION.....	497
3. CLASSIFICATION OF THREE-DIMENSIONAL FLOWS.....	512
4. THREE-DIMENSIONAL TURBULENT BOUNDARY LAYERS.....	522
5. CURVATURE EFFECTS.....	563
6. ROTATION EFFECTS.....	612
7. LATERAL STRAINING.....	622
8. IMPOSITION OF SUDDEN STRAINS	637
9. ROUGHNESS EFFECTS.....	652
10.FREESTREAM TURBULENCE.....	673
11.THREE-DIMENSIONAL DUCT FLOW.....	684
REFERENCES.....	708

APPENDIX B. GEOMETRY CONCEPTS.....	728
------------------------------------	-----

SUBJECT INDEX	739
---------------------	-----

LIST OF SYMBOLS AND PAGE OF FIRST OCCURRENCE	748
