<b>1</b>	<b>Synthesis of Aluminosilicate Zeolites and Related Silica-Based Materials</b>	<b>1</b>
	Jean-Louis Guth and Henri Kessler	
1.1	Scope	1
1.2	Introduction	1
1.2.1	Structure, Composition, Nomenclature	1
1.2.2	History of Zeolite Synthesis	4
1.3	Theoretical Part	5
1.3.1	Crystallogenesi s	5
1.3.1.1	Nucleation	5
1.3.1.2	Crystal Growth	9
1.3.1.3	Advancement of the Crystallization with Time	13
1.3.1.4	Ostwald's Rule	14
1.3.2	Zeolite Synthesis, Mechanism and Chemistry	16
1.3.2.1	Presentation of the Synthesis System	16
1.3.2.2	Framework T Elements	18
1.3.2.3	Mineralizer and T Element Species in the Solution	20
1.3.2.4	Templates	22
1.4	Experimental Part	23
1.4.1	Experimental Factors	23
1.4.1.1	Nature of the Reactants	24
1.4.1.2	Composition of the Reaction Mixture	25
1.4.1.3	Preparation Procedure of the Reaction Mixture	25
1.4.1.4	Aging	26
1.4.1.5	Seeding	26
1.4.1.6	Nature of the Reactor	26
1.4.1.7	Crystallization Temperature	27
1.4.1.8	Pressure	27
1.4.1.9	Agitation	27
1.4.1.10	Heating Time	27
1.4.2	Review of Zeolites Obtained from Various Reaction Systems	28
1.4.2.1	All-Silica Molecular Sieves (T = Si)	28
1.4.2.2	(Si, Al) Systems with Inorganic Cations	28
1.4.2.3	(Si, Al) Systems with Inorganic and Organic Templates	29

1.4.2.4	(Si, Al) Systems with Organic Templates . . . . .	29
1.4.2.5	(Si, T <sup>II</sup> ) Systems, T <sup>II</sup> = Be, Co, Cu, Zn . . . . .	30
1.4.2.6	(Si, T <sup>III</sup> ) Systems, T <sup>III</sup> = B, Fe, Ga . . . . .	31
1.4.2.7	(Si, T <sup>IV</sup> ) Systems, T <sup>IV</sup> = Ge, Ti, Zr . . . . .	32
1.4.2.8	Other Si-Based Systems – V, Cr and Mo in Tetrahedral Frameworks . . . . .	32
1.4.3	Synthesis of Some Selected Important Zeolites . . . . .	33
1.4.3.1	Zeolites with the LTA-Type Structure . . . . .	33
1.4.3.2	Zeolites with FAU-Type Structures and Polytypes . . . . .	34
1.4.3.3	Synthesis of Zeolite Beta . . . . .	36
1.4.3.4	Synthesis of Zeolite LTL . . . . .	37
1.4.3.5	Synthesis of Zeolites with the MAZ-Type Structure . . . . .	37
1.4.3.6	Synthesis of Zeolites with the MFI-Type Structure . . . . .	38
1.4.3.7	Synthesis of Zeolites with the MOR-Type Structure . . . . .	41
1.4.3.8	Synthesis of Zeolites with the OFF- and/or the ERI-Type Structure . . . . .	42
1.5	Synthesis of Other Selected Materials . . . . .	44
1.5.1	Titanosilicates with Mixed Octahedral-Tetrahedral Frameworks . . . . .	44
1.5.2	Synthesis of Mesoporous Aluminosilicates . . . . .	45
1.6	Activation of Zeolites . . . . .	46
	References . . . . .	46
<b>2</b>	<b>Phosphate-Based Zeolites and Molecular Sieves . . . . .</b>	<b>53</b>
	Johan A. Martens and Pierre A. Jacobs	
2.1	Introduction . . . . .	53
2.2	Structural, Synthetic and Physicochemical Concepts Relevant to Poro-tecto-phosphates . . . . .	54
2.2.1	AlPO <sub>4</sub> (GaPO <sub>4</sub> ) Topological Concept . . . . .	54
2.2.2	Al (Ga) Coordination Concept . . . . .	56
2.2.3	Template: Framework Stoichiometry Concept . . . . .	60
2.3	Rationalization of Properties of Poro-tecto-phosphates with Structural, Synthetic and Physicochemical Concepts . . . . .	62
2.3.1	Pore Size . . . . .	62
2.3.2	Thermal Stability . . . . .	62
2.3.3	Adsorption Properties . . . . .	65
2.3.4	Isomorphic Substitution . . . . .	68
2.3.5	Isomorphic Substitutions SM Ia, Ib and IIa Generating Framework Charges . . . . .	71
2.3.6	Isomorphic Substitutions Ic and IIb Generating Electroneutral Frameworks . . . . .	73
2.3.7	Si Incorporation According to SM III Generating Si and ALP Domains . . . . .	74
2.3.8	Si Incorporation According to Combinations of SM IIa and SM III Generating SiAl and SiALP Domains . . . . .	75
	References . . . . .	76

<b>3</b>	<b>Modification of Zeolites</b>	<b>81</b>
	Günter H. Köhl	
3.1	Ion Exchange of Zeolites	81
3.1.1	Introduction and Theory	81
3.1.2	Aqueous Ion Exchange	81
3.1.2.1	Ion-Exchange Isotherms	84
3.1.2.2	Experimental	86
3.1.2.3	Thermochemistry of Ion Exchange	88
3.1.3	Ion Exchange of Zeolites X and Y	88
3.1.3.1	Univalent Ion Exchange	90
3.1.3.2	Divalent Ion Exchange	93
3.1.3.3	Trivalent Ion Exchange	98
3.1.4	Ion Exchange of ZSM-5	100
3.1.4.1	Univalent Ion Exchange	100
3.1.4.2	Divalent Ion Exchange	102
3.1.4.3	Trivalent Ion Exchange	103
3.1.4.4	Aluminum-Independent Ion Exchange	103
3.2	Metals Supported on Zeolites	104
3.2.1	Reduction of Metal Ions in Zeolites	105
3.2.1.1	Group IB	105
3.2.1.2	Group VIIIA, Fourth Period	113
3.2.1.3	Group VIIIA, Fifth Period	116
3.2.1.4	Group VIIIA, Sixth Period	123
3.3	Dealumination of Zeolites	127
3.3.1	Thermal Treatment	127
3.3.1.1	Hydrogen Zeolites	128
3.3.1.2	Dehydroxylation	132
3.3.2	Extraction of Framework Aluminum with Acid	133
3.3.2.1	The Aluminum-Deficient Form	134
3.3.2.2	Annealing of Tetrahedral Vacancies; High-Silica Faujasite	135
3.3.3	Hydrothermal Treatment	136
3.3.3.1	The Stabilized Form	136
3.3.3.2	The Ultrastable Form	140

## **4 Characterization of Zeolites – Infrared and Nuclear Magnetic Resonance Spectroscopy and X-Ray Diffraction . . 198**

Hellmut G. Karge, Michael Hunger, and Hermann K. Beyer

	List of Abbreviations . . . . .	198
	Introduction . . . . .	199
4.1	IR Spectroscopy . . . . .	201
4.1.1	Introduction . . . . .	201
4.1.2	Theoretical Background . . . . .	201
4.1.3	Experimental Techniques . . . . .	204
4.1.3.1	Transmission IR Spectroscopy . . . . .	204
4.1.3.2	Diffuse Reflectance IR (Fourier Transform) Spectroscopy (DRIFT) . . . . .	206
4.1.3.3	Photoacoustic IR Spectroscopy (PAS) . . . . .	207
4.1.3.4	Cells for Studying Zeolites and Zeolite Adsorbate Systems by IR Spectroscopy . . . . .	208
4.1.4	Study of Framework Vibrations of Zeolites . . . . .	211
4.1.5	IR Investigation of Acidic and Basic Sites in Zeolites . . . . .	215
4.1.5.1	Brønsted Acid Sites (Acidic Hydroxyls) . . . . .	216
4.1.5.2	Lewis Acid Sites – True Lewis Sites . . . . .	230
4.1.5.3	Lewis Acid Sites – Cations . . . . .	231
4.1.6	Basic Sites (Basic Hydroxyls, Basic Oxygens) . . . . .	233
4.1.7	Zeolite-Adsorbate Systems . . . . .	235
4.1.8	Motion, Diffusion and Reaction of Guest Molecules in Zeolites . . . . .	238
4.2	NMR Spectroscopy . . . . .	239
4.2.1	Introduction . . . . .	239
4.2.2	Theoretical Background . . . . .	240
4.2.2.1	Zeeman Interaction and Relaxation Effects . . . . .	240
4.2.2.2	Solid-State Interactions . . . . .	242
4.2.3	Experimental Techniques . . . . .	245
4.2.3.1	Methods of High-Resolution Solid-State NMR . . . . .	245

4.2.3.2	Cross-Polarization and Other Selected Pulse Techniques . . . .	248
4.2.3.3	Two-Dimensional NMR Spectroscopy . . . . .	249
4.2.4	Applications . . . . .	250
4.2.4.1	<sup>29</sup> Si MAS NMR Spectroscopy of SiO <sub>4</sub> Tetrahedra in the Zeolite Framework . . . . .	250
4.2.4.2	<sup>27</sup> Al NMR Spectroscopy of Framework and Non-Framework Aluminum in Zeolites . . . . .	256
4.2.4.3	<sup>31</sup> P MAS NMR Spectroscopy of PO <sub>4</sub> Tetrahedra in Aluminophosphate-, Silicoaluminophosphate-, and Gallophosphate-Type Zeolites . . . . .	262
4.2.4.4	<sup>11</sup> B MAS NMR Spectroscopy of Boron-Modified Zeolites . . . .	266
4.2.4.5	Solid-State <sup>17</sup> O NMR Spectroscopy of the Zeolite Framework . .	266
4.2.4.6	<sup>1</sup> H MAS NMR Spectroscopy of Acidic and Non-Acidic Hydroxyl Groups in Zeolites . . . . .	267
4.2.4.7	Solid-State <sup>23</sup> Na NMR Spectroscopy of Sodium Cations in Hydrated and Dehydrated Zeolites . . . . .	275
4.2.4.8	<sup>133</sup> Cs MAS NMR Spectroscopy of Cesium Cations in Hydrated and Dehydrated Mordenites and Faujasites . . . .	282
4.2.4.9	<sup>129</sup> Xe NMR Investigations of the Zeolitic Pore Architecture . . .	285
4.2.4.10	Investigations of Brønsted and Lewis Acid Sites by Probe Molecules . . . . .	291
4.3	Application of Powder X-Ray Diffractometry in Zeolite Research . . . . .	295
4.3.1	Introduction . . . . .	295
4.3.2	Parameters Affecting the Intensity of Bragg Reflections . . . .	296
4.3.3	Calculation of Structure Factors . . . . .	299
4.3.4	Powder-Data Structure Refinement . . . . .	302
4.3.4.1	Profile-Fitting Method . . . . .	303
4.3.4.2	Rietveld Method . . . . .	304
4.3.4.3	Application of the Rietveld Method in Zeolite Structure Analysis . . . . .	306
4.3.5	Crystallinity Determination . . . . .	308
4.3.6	Determination of Framework Aluminum from X-Ray Data . . .	310
4.3.7	Determination of the Crystallite Size . . . . .	314
	References . . . . .	316

## 5 Shape-Selective Catalysis in Zeolites . . . . . 327

Jens Weitkamp, Stefan Ernst, and Lothar Puppe

5.1	Scope . . . . .	327
5.2	Introduction . . . . .	328
5.2.1	Molecular Dimensions . . . . .	328
5.2.2	Porous Solids: Crystallographic and Effective Pore Diameter . .	329
5.2.3	Molecular Sieving . . . . .	331

5.3	Catalysis and Selectivity . . . . .	333
5.3.1	Incentives for Applying a Catalyst . . . . .	333
5.3.2	Intrinsic, Grain and Reactor Selectivity . . . . .	334
5.3.3	Shape-Selective Catalysis . . . . .	335
5.4	Internal vs. External Surface of Zeolites . . . . .	336
5.4.1	Effect of the Crystallite Size . . . . .	336
5.4.2	Experimental Techniques . . . . .	337
5.5	Examples for Shape-Selective Reactions and Models for Rationalizing the Observed Effects . . . . .	340
5.5.1	Early Observations . . . . .	340
5.5.2	The Classical Concept After Weisz and Csicsery . . . . .	341
5.5.2.1	Mass Transfer Effects: Reactant and Product Shape Selectivity . . . . .	341
5.5.2.2	Intrinsic Chemical Effects: Restricted Transition State Shape Selectivity . . . . .	343
5.5.2.3	Discrimination Between Mass Transfer and Intrinsic Chemical Effects . . . . .	344
5.5.3	Other Concepts . . . . .	345
5.5.3.1	The Cage or Window Effect . . . . .	345
