1. Droplets: Capillarity and Wetting..... 1

By F. Brochard-Wyart (With 35 figures)

1.1	Introduction	1
1.2	The Players and the Rules of the Game	2
1.2.1	Surface and Interfacial Tension	2
1.2.2	The Triple Line and Contact Angles	4
1.2.3	Curved Interfaces: Laplace's Formula	5
1.2.4	Capillary Length κ^{-1} : the Role of Gravity	6
1.2.5	The Spreading Parameter S	7
1.2.6	Controlling Wettability	8
1.2.7	The Dynamics of Wetting	10
1.2.8	High-Speed Wetting: The Role of Inertia	11
1.3	Capillary Rise and Meniscus	12
1.3.1	Capillary Rise: Jurin's Law	12
1.3.2	Meniscus	14
1.4	The Shape of Droplets	15
1.4.1	Solid Substrates	15
1.4.2	Liquid Substrates	17
1.5	Wetting of Fibres	18
1.6	Droplet Spreading Dynamics	22
1.7	Forced Wetting	25
1.7.1	Experiment (Designed by D. Quéré)	25
1.7.2	The Minimum Speed for Film Deposition	26
1.7.3	Film Thickness on a Fibre (or in a Capillary Tube)	27
1.8	Dewetting	29
1.8.1	Thick Film Dewetting	30
1.8.2	Microscopic Film Dewetting	32

1.9 Further Perspectives	37
1.9.1 Contact Line Instabilities	37
1.9.2 The Marangoni Effect	38
1.9.3 Spreading on Nanoscopic Scales	42
Appendix	44
Bibliography	45
2. Fractals	47
By M. Daoud and H. Van Damme (With 20 figures)	
2.1 Disorder and Scale Invariance	47
2.2 Self-Similarity and Self-Affinity	54
2.3 Measure, Heterogeneity and Multifractality	60
2.4 Random Walks, Polymer Chains and Membranes	61
2.5 Percolation, Gelation and the Metal-Insulator Transition	65
2.6 Diffusion-Limited Aggregation and Growth	72
2.7 Diffusion, Vibrations and Chemical Reactions	80
2.8 By Way of Conclusion	84
3. Small Volumes and Large Surfaces: The World of Colloids	87
By J. C. Daniel and R. Audebert (With 21 figures)	
3.1 The Colloidal State: In Search of a Definition	87
3.2 Colloids in Everyday Life	88
3.3 The Colloidal System: A Delicate Balance of Opposing Forces	91
3.3.1 Thermal Agitation and the Force of Gravity	91
3.3.2 Van der Waals Forces	92
3.3.3 Forces of Electrostatic Origin	95
3.4 The DLVO Theory	98
3.5 How do Colloidal Aggregates Build up?	100
3.5.1 The Kinetics of Aggregation	100
3.5.2 The Morphology of Colloidal Aggregates	102
3.6 The Thermodynamics of Colloidal Systems	103
3.7 Modifying the Interface	108
3.7.1 Chemical Modification	108
3.7.2 Surfactants and Interfaces	108
3.7.3 Polymers and Interfaces	109
3.8 Methods for Preparing Colloidal Dispersions	120
3.8.1 Fragmentation Methods	121
3.8.2 Condensation Methods	121

3.9 The Future of Colloid Science	129
Bibliography	130

4. The Physicochemistry of Surfactants 133

By C. Taupin (With 15 figures)

4.1 Introduction	133
4.2 Amphiphiles in Solution	137
4.3 Interfacial Films and Spontaneous Curvature	139
4.4 Adsorption onto Surfaces	141
4.5 Amphiphilic Films in Presence of Other Compounds	143
4.6 Surfactants and Highly Divided Systems	147
4.7 The Structure of Microemulsions	150

5. From Giant Micelles to Fluid Membranes: Polymorphism in Dilute Solutions of Surfactant Molecules 155

By G. Porte (With 28 figures)

5.1 Introduction	155
5.2 Spontaneous Curvature and Micellar Shape	157
5.3 Micellar Shapes and Phase Behaviour	160
5.4 Giant Micelles	163
5.5 Fluid Membranes	168
5.5.1 Structure in the Dilute Lamellar Phase L_α	172
5.5.2 The Sponge Phase L_3	175
5.5.3 Scaling Relations for Fluid Membrane Phases	178
5.6 Conclusion	183
Bibliography	184

6. Polymers Formed from Self-Assembled Structures 187

By F. Candau (With 14 figures)

6.1 Introduction	187
6.2 Microemulsion Polymerisation	188
6.2.1 Formulation and Structure	189
6.2.2 Polymerisation Mechanism	195
6.2.3 Microlatex Characteristics	201
6.2.4 Polymer Characteristics	201
6.2.5 Applications	202
6.3 Polymerisation in Liquid Crystalline Phase	204

6.4 Polymerisable Surfactants	205
6.4.1 Vesicles	206
6.4.2 Micellar Systems	210
6.5 Conclusion	216
Bibliography	216

7. Polymer Materials 219

By L. Monnerie (With 36 figures)

7.1 Introduction	219
7.2 Semi-Crystalline Polymers	219
7.2.1 Crystalline Structures	220
7.2.2 Morphology	223
7.2.3 Melting	226
7.3 Amorphous Polymers	227
7.3.1 The Glass Transition Phenomenon	228
7.3.2 Influence of Chemical Structure on Glass Transition Temperature	231
7.3.3 Glass Transition for Semi-Crystalline Polymers	232
7.4 Different States of Polymer Materials	233
7.4.1 Amorphous Materials	233
7.4.2 Crosslinked Amorphous Materials	234
7.4.3 Semi-Crystalline Materials	235
7.5 Elastomer Behaviour	237
7.5.1 Elasticity	239
7.6 Viscoelasticity and Damping	244
7.7 Solid Polymer Behaviour Under Longitudinal Load	248
7.7.1 Brittle Behaviour	248
7.7.2 Plastic Deformation and Stretching	249
7.7.3 Orientation	250
7.8 Processing Thermoplastic Polymers	252
7.8.1 Thermoforming	252
7.8.2 Viscosity of Polymer Melts	253
7.8.3 Extrusion	254
7.8.4 Injection Moulding	258
7.9 Conclusion	258
Bibliography	259

8. Polymer Solutions: A Geometric Introduction 261

By T.A. Witten (With 8 figures)

8.1 Introduction	261
8.2 Random-Walk Polymer	263
8.3 Fractals in Solution	265
8.4 Diffusion and Flow near a Fractal	271
8.5 How Self-Interaction Changes the Fractal Dimension	277
8.6 Solutions of Many Polymers	280
8.7 Dynamic Relaxation in Polymer Solutions	283
8.8 Conclusion	286
Bibliography	286

9. Liquid Crystals: Between Order and Disorder 289

By J. Prost and C.E. Williams (With 22 figures)

9.1 Introduction	289
9.2 Nematic Liquid Crystals	291
9.2.1 Orientational Order, Elasticity and Singularities	291
9.2.2 Frederiks Transition and Display Applications	295
9.2.3 Threads, Nuclei and Disclinations	298
9.3 Lamellar Systems	301
9.3.1 The Different Structures	301
9.3.2 Characteristic Properties	303
9.3.3 Chiral Systems	308
9.4 Columnar Systems	311
9.4.1 The Different Structures	311
9.4.2 Characteristic Properties	311
9.4.3 Threads and Chirality	313
9.5 Conclusion	314
Bibliography	315

Index 317

Soft Matter Physics

Daoud, M.; Williams, C.E. (Eds.)

1999, XVI, 320 p., Hardcover

ISBN: 978-3-540-64852-9
