

Table of Contents

1. Field Theory	1
1.1 A Motivation for Path Integrals	1
1.2 Gaussian Integrals and Random Variables	6
1.2.1 Preliminaries	6
1.2.2 Gaussian Integrals in Finitely Many Variables	7
1.2.3 The Covariance Splitting Formula	10
1.3 Field Theory on a Lattice	11
1.3.1 Discretization	12
1.3.2 The Partition Function and Correlations	15
1.3.3 The Ising Model	17
1.4 Free Fields	19
1.5 Properties of the Free Covariance	21
1.6 Problems With and Without Cutoffs	23
2. Techniques	27
2.1 Integration by Parts	27
2.2 Wick Ordering	28
2.2.1 Definition and Main Properties	28
2.2.2 Further Results	30
2.3 Evaluation of Gaussian Integrals	33
2.3.1 Labelled Feynman Graphs	33
2.3.2 Symmetry Factors and Topological Feynman Graphs	38
2.3.3 Motivations for Taking the Logarithm	40
2.4 Polymer Systems	41
2.4.1 Preparation: Graphs and Partitions	42
2.4.2 The Logarithm of the Polymer Partition Function	44
2.5 The Effective Action and Connected Graphs	47
2.5.1 Definition and Semigroup Property	47
2.5.2 Derivation of the Graphical Representation	49
2.5.3 Result and Discussion	55
2.6 Graphical Representations: Conclusions	57

3. The Renormalization Group	63
3.1 A Cutoff in Momentum Space	64
3.2 The Semigroup Structure of Renormalization	65
3.3 The Renormalization Group Equation	68
3.3.1 The Functional Form	68
3.3.2 The Component Form	69
3.4 The Structure of the RG equation	72
3.4.1 The Graphical Representation	72
3.4.2 The Relation to the Feynman Graph Expansion	74
3.4.3 The Continuum Limit at Fixed Λ_0	74
3.5 Differential Inequalities	75
3.6 Two Dimensions	78
3.6.1 Boundedness	78
3.6.2 ϕ_2^4	80
3.6.3 Convergence	83
3.7 Three Dimensions	85
3.7.1 Power Counting for the Truncated Equation	86
3.7.2 Renormalization: A Change of Boundary Conditions	88
3.7.3 Renormalized ϕ_3^4	91
3.8 Four Dimensions	99
3.8.1 Counterterms in Second Order	100
3.8.2 Power Counting (Skeleton Flow)	102
3.8.3 The Boundary Conditions for Renormalization	103
3.8.4 Renormalized ϕ^4 Theory	105
3.9 The RG Flow in the Ladder Approximation	109
4. The Fermi Surface Problem	115
4.1 Physical Motivation	115
4.2 Many-Fermion Systems on a Lattice	116
4.2.1 The Hamiltonian	117
4.2.2 The Grand Canonical Ensemble	120
4.2.3 The Fermi Gas	121
4.2.4 The Functional Integral Representation	125
4.2.5 RG Flow: Energy Scales	128
4.2.6 Model Assumptions	128
4.2.7 The Physical Significance of the Assumptions	130
4.2.8 The Role of the Initial Energy Scale	131
4.3 The Renormalization Group Differential Equation	132
4.3.1 The Effective Action	132
4.3.2 The RG Equation	133
4.3.3 The Component RGE in Fourier Space	138
4.4 Power Counting for Skeletons	139
4.4.1 Bounds for the Infinite-Volume Propagator	139
4.4.2 Sup Norm Estimates	141
4.4.3 Estimates in L^1 Norm	145

4.5	The Four-Point Function	148
4.5.1	Motivation	148
4.5.2	The Parquet Four-Point Function	149
4.5.3	The One-Loop Volume Bound.....	152
4.5.4	The Particle–Particle Flow	154
4.5.5	The Particle–Hole Flow	158
4.5.6	The Combined Flow	159
4.6	Improved Power Counting	160
4.6.1	Overlapping Loops	160
4.6.2	Volume Improvement from Overlapping Loops	162
4.6.3	Volume Improvement in the RGE	164
4.6.4	Bounds on the Non-Ladder Skeletons	165
4.6.5	The Derivatives of the Skeleton Selfenergy	168
4.7	Renormalization Subtractions	169
4.7.1	Motivation; the Counterterm	169
4.7.2	Full Amputation	171
4.7.3	Bounds for a Truncation	172
4.7.4	The Meaning of K	176
4.8	Conclusion	178
4.8.1	Summary.....	178
4.8.2	A Fermi Liquid Criterion	179
4.8.3	How the Curvature Sets a Scale	181
A.	Appendix to Chapters 1–3	183
A.1	A Topology on the Ring of Formal Power Series	183
A.2	Fourier Transformation.....	183
A.3	Properties of the Boson Propagator	186
A.4	Wick Reordering for Bosons	187
A.5	The Lower Bound for the Sunset Graph	191
B.	Appendix to Chapter 4	193
B.1	Fermionic Fock Space	193
B.2	Calculus on Grassmann Algebras	194
B.3	Grassmann Gaussian Integrals	198
B.4	Gram’s Inequality; Bounds for Gaussian Integrals.....	201
B.5	Grassmann Integrals for Fock Space Traces	204
B.5.1	Delta Functions and Integral Kernels	204
B.5.2	The Formula for the Trace.....	206
B.5.3	The Time Continuum Limit	208
B.5.4	Nambu Formalism	214
B.5.5	Matsubara Frequencies	215
B.6	Feynman Graph Expansions	217
B.7	The Thermodynamic Limit in Perturbation Theory	219

B.8 Volume Improvement Bounds 222

 B.8.1 The One-Loop Volume Bound 222

 B.8.2 The Two-Loop Volume Bound 224

Renormalization

An Introduction

Salmhofer, M.

1999, X, 231 p., Hardcover

ISBN: 978-3-540-64666-2
