<b>1. Reflection and Refraction of Spherical Waves</b>	<b>1</b>
1.1 Integral Representation of the Sound Field	1
1.2 Reflected Wave	5
1.3 Refracted Wave	16
1.4 Very Large or Very Small Ratio of Media Densities. Reflection from an Impedance Boundary	21
1.5 Weak Boundaries	26
1.6 Reflection from a Moving Medium	33
<b>2. Reflection of Bounded Wave Beams</b>	<b>41</b>
2.1 Displacement of a Reflected Beam	42
2.1.1 Classical Expression for Displacement	42
2.1.2 Examples of Beam Displacement	44
2.2 Incidence Angle Close to Angle of Total Reflection	47
2.2.1 Displacement of the Maximum of the Beam Envelope	47
2.2.2 The Role of Absorption	52
2.2.3 Displacement of the “Centroid” of a Beam	53
2.3 Approach to Beam Displacement Using Energy Considerations	58
2.4 Incidence Angle Close to $\pi/2$	63
2.5 Reflection from a Boundary with Refraction Index Close to Unity	65
2.6 The Goos-Hänchen Effect	71
2.7 “Nonspecular Effects” Accompanying Beam Reflection	72
2.7.1 Longitudinal Displacement of a Beam	73
2.7.2 Deviation of the Beam Reflection Angle from the Angle of Incidence	76
2.8 Some Remarks About Beam Reflection at a Fluid–Solid Interface	79
2.9 Concluding Remarks	79
<b>3. The Lateral Wave</b>	<b>81</b>
3.1 Physical Interpretation and Significance	81

3.2	The Ray Approach .....	85
3.2.1	Ray Displacement upon Reflection .....	85
3.2.2	Caustics of Usual and Diffracted Rays .....	86
3.2.3	Lateral Rays in a Moving Medium .....	89
3.3	Region of Observation of a Lateral Wave .....	91
3.3.1	Two Lossy Homogeneous Halfspaces in Contact ...	91
3.3.2	Physical Interpretation .....	93
3.3.3	The General Case .....	95
3.4	Lateral Waves in Layered Media .....	95
3.4.1	Very Large Horizontal Source–Receiver Separations .....	95
3.4.2	Review of Other Problems .....	99
3.5	Lateral Wave Generation by a Directional Source .....	102
3.5.1	Lateral Waves in Sound Beam Reflection .....	102
3.5.2	Distributed Sound Source .....	107
3.6	Weakly Uneven Boundaries .....	108
3.6.1	The Mean Field .....	109
3.6.2	Random Lateral Wave from a Plane Incident Wave .....	112
3.6.3	Random Lateral Wave from a Point Source .....	114
4.	<b>Exact Theory of the Sound Field in Inhomogeneous Moving Media</b> .....	121
4.1	Wave Equation for Nonstationary (Nonsteady-State) Moving Media .....	121
4.1.1	Linearization of Hydrodynamics Equations .....	121
4.1.2	Exact Wave Equations .....	124
4.1.3	Sound Wave Equation for a Medium with Slow Currents .....	126
4.2	Reciprocity Relations .....	130
4.2.1	Reciprocity Principle for a Medium at Rest .....	130
4.2.2	Layered Moving Media. Flow Reversal Theorem ...	131
4.2.3	Flow Reversal Theorem and the Reciprocity Principle for Homogeneous Media and Homogeneous Flow .....	133
4.3	Exact Solutions of the Wave Equations for a Point Source .....	135
4.3.1	The Point Source in Homogeneous Moving Media .	135
4.3.2	Integral Representation of the Field in a Layered Medium .....	142
4.3.3	Sound Field in a Medium Where Sound Velocity Is a Linear Function of $z$ .....	144
4.3.4	Sound Field in a Medium Where the Squared Refraction Index Is a Linear or Quadratic Function of Coordinates .....	146

4.4	Discrete Spectrum of a Field. Normal Modes .....	150
4.4.1	Discrete Spectrum in a Medium at Rest .....	151
4.4.2	A Linear Source in a Waveguide .....	152
4.4.3	Discrete Spectrum of a Field of a Point Source in a Moving Medium .....	155
4.4.4	More About the Structure of the Discrete Spectrum of a Point Source in a Moving Medium .....	160
4.4.5	Formulas of More Convenience .....	166
4.5	Phase and Group Velocities of Modes .....	169
4.5.1	Generalized Orthogonality of Modes .....	170
4.5.2	Mode Phase and Group Velocities in a Medium at Rest .....	174
4.5.3	Phase and Group Velocities in a Moving Medium ..	177
4.6	The Epstein Waveguide .....	182
4.6.1	Waveguide with a Free Boundary .....	182
4.6.2	Waveguide with an Absolutely Rigid Boundary ...	186
4.6.3	Comparison with Results Obtained in the WKB Approximation .....	188
<b>5.</b>	<b>High Frequency Sound Fields .....</b>	<b>193</b>
5.1	Geometrical Acoustics Approximation for a Localized Source .....	193
5.1.1	Ray Series. Eikonal Function .....	193
5.1.2	Ray Equations. Ray Tube. Power Density Flow ...	194
5.1.3	A Three-Dimensionally Inhomogeneous Moving Medium .....	196
5.1.4	Layered Media and Horizontal Flow .....	200
5.2	Ray Acoustics as a Limiting Case of Wave Theory .....	202
5.2.1	The Case of a Moving Medium .....	202
5.2.2	Waveguide Sound Field in the Ray Approximation	205
<b>6.</b>	<b>The Field at and near a Caustic .....</b>	<b>209</b>
6.1	Simple Caustics .....	210
6.1.1	Definition .....	210
6.1.2	Caustics in Waveguides. Qualitative Results .....	211
6.1.3	The Sound Field near an Ordinary Point of a Caustic .....	211
6.1.4	Field near a Caustic in Terms of Ray Quantities ..	215
6.1.5	Limits of Validity .....	216
6.2	Reference Functions Method .....	217
6.2.1	Caustics in Media at Rest .....	217
6.2.2	The Reference Functions Method for Solving One-Dimensional Wave Equations .....	221

6.2.3	Moving Media	223
6.3	A Cusp of a Caustic and Other Peculiarities of Ray Structures	229
6.3.1	Uniform Asymptotics	229
6.3.2	Local Asymptotics	236
6.3.3	General Aspects of Field Singularities	239
<b>7.</b>	<b>Wave Propagation</b>	
	<b>in a Range Dependent Waveguide</b>	243
7.1	Reference Waveguide Method	244
7.1.1	Interaction of Modes	244
7.1.2	Coupling Coefficients of Modes	247
7.1.3	Solution of Coupling Equations by the Method of Successive Approximations	254
7.2	Propagation of Waves in Three Dimensions in a Range Dependent Waveguide	263
7.2.1	Horizontal Rays	263
7.2.2	Calculation of Mode Amplitude at the Ray	265
7.2.3	The Field in the Region of a Simple Caustic of Horizontal Rays	272
7.2.4	Applicability Conditions of the Adiabatic Approximation. Smooth Perturbations Method	275
7.3	Waveguide Propagation in a Three-Dimensional Inhomogeneous Moving Medium	282
7.3.1	Equations for the Sound Field in Compressed Coordinates	283
7.3.2	Boundary Conditions for a Sound Field in a Moving Medium	285
7.3.3	Horizontal (Modal) Rays in a Moving Medium	288
7.3.4	Adiabatic Invariants	293
7.3.5	Sound Field of a Point Source	295
7.3.6	Flow Reversal Theorem for Modes	297
7.4	The Sound Field in the Vicinity of the Cutoff Section of a Waveguide	300
7.4.1	Waveguide with Impedance Boundaries	300
7.4.2	Modes and Continuous Spectrum	304
7.4.3	Penetration of a Mode Through a Cutoff Section in a Pekeris Waveguide	312
7.5	Rays in Irregular Waveguides	320
7.5.1	The Ray Invariant in a Medium at Rest	320
7.5.2	Accuracy of Conservation of the Ray Invariant	325
7.5.3	The Ray Invariant in a Moving Medium	326
7.6	Parabolic Equation Method	329
7.6.1	Standard Parabolic Equation	330

7.6.2	Relations Between Solutions to PE and the Helmholtz Equation .....	334
7.6.3	One-Way Wave Equations .....	342
7.6.4	Effect of Density Inhomogeneities and of Shear Waves .....	350
7.6.5	Parabolic Approximation for a Sound Field in a Moving Fluid .....	353
7.6.6	The Acoustic Energy Conservation Law and Reciprocity Relations in the Narrow-Angle Parabolic Approximation ....	357
<b>8.</b>	<b>Energy Conservation and Reciprocity for Waves in Three-Dimensionally Inhomogeneous Moving Media ..</b>	<b>361</b>
8.1	Oscillatory Displacement of Fluid Particles .....	361
8.2	Linearized Equations of Hydrodynamics .....	363
8.2.1	Euler and Continuity Equations .....	363
8.2.2	Equation of State .....	365
8.2.3	Equations Governing the Linear Waves .....	367
8.2.4	An Alternative Version of the Mixed Eulerian–Lagrangian Representation of the Equations of Motion .....	369
8.3	Linearized Boundary Conditions .....	370
8.4	Flow Reversal Theorem .....	373
8.4.1	Solenoidal Flow .....	374
8.4.2	General Steady Ambient Flow .....	377
8.4.3	Reciprocity Principle for Acoustic-Gravity Waves ..	379
8.4.4	Comparison to Other Versions of FRT .....	381
8.5	Conservation of Wave Action .....	384
8.6	Wave Energy Conservation Law .....	387
8.7	Applications to Sound Waves in a Plane-Stratified Moving Fluid .....	392
8.7.1	Quasi-Plane Waves .....	392
8.7.2	Reciprocity Relations for Plane-Wave Transmission Coefficients .....	393
8.7.3	Violations of FRT and the Wave Energy Conservation .....	395
8.7.4	Output of Sound Sources in a Flow .....	396
8.8	Summary .....	398
	<b>Appendix A. The Reference Integrals Method .....</b>	<b>401</b>
A.1	The Method of Steepest Descent .....	401
A.1.1	Integrals over an Infinite Contour .....	401
A.1.2	Integrals over Semi-infinite Contours .....	405
A.1.3	Integrals with Finite Limits .....	406

A.1.4	The Contribution of Branch Points .....	406
A.1.5	Integrals with Saddle Points of Higher Orders .....	407
A.1.6	Several Saddle Points .....	409
A.1.7	Concluding Remarks .....	409
A.2	Integrals over a Real Variable .....	410
A.2.1	Asymptotics of Laplace Integrals .....	410
A.2.2	Stationary Phase Method. Asymptotics of Fourier Integrals .....	411
A.2.3	Asymptotics of Multiple Fourier Integrals .....	412
A.2.4	Asymptotics of Multiple Laplace Integrals .....	414
A.2.5	Contributions of Critical Points on a Boundary .....	414
A.3	Uniform Asymptotics of Integrals .....	414
A.3.1	The Concept of Uniform Asymptotics .....	414
A.3.2	A Pole and a Simple Stationary Point .....	415
A.3.3	A Single Simple Stationary Point and a Branch Point ..	418
A.3.4	Semi-infinite Contours .....	421
A.3.5	Other Cases .....	423
A.3.6	Concluding Remarks .....	425

## Appendix B.

### **Differential Equations of Coupled-Mode Propagation in Fluids with Sloping Boundaries and Interfaces .....**

B.1	Derivation of the Differential Equations for Mode Coupling .....	430
B.2	Mode-Coupling Coefficients .....	435
B.3	Energy Conservation and Symmetry of the Mode Coupling Coefficients .....	438
B.4	Convergence of Normal Mode Expansions and its Implications on the Mode-Coupling Equations: Two Examples .....	440

## Appendix C.

### **Reciprocity and Energy Conservation Within the Parabolic Approximation .....**

C.1	Definitions and Basic Relationships .....	448
C.1.1	Range-Independent One-Way Wave Equations .....	449
C.1.2	Equivalence of Reciprocity and Energy Conservation ..	455
C.2	Energy Conserving .....	456
C.3	Generalized Claerbout PE (GCPE) .....	461
C.3.1	GCPE Derivation .....	461
C.3.2	Local Reciprocity and Energy Balance Relations .....	462
C.3.3	Media with Interfaces .....	464
C.4	Comparison of Different One-Way Approximations .....	468

C.5   Conclusion .....	472
<b>References</b> .....	475
<b>Subject Index</b> .....	517

Acoustics of Layered Media II  
Point Sources and Bounded Beams
