Introduction	xiii
1 Equivariant Cohomology in Topology	1
1.1 Equivariant Cohomology via Classifying Bundles	1
1.2 Existence of Classifying Spaces	5
1.3 Bibliographical Notes for Chapter 1	6
2 G^* Modules	9
2.1 Differential-Geometric Identities	9
2.2 The Language of Superalgebra	11
2.3 From Geometry to Algebra	17
2.3.1 Cohomology	19
2.3.2 Acyclicity	20
2.3.3 Chain Homotopies	20
2.3.4 Free Actions and the Condition (C)	23
2.3.5 The Basic Subcomplex	26
2.4 Equivariant Cohomology of G^* Algebras	27
2.5 The Equivariant de Rham Theorem	28
2.6 Bibliographical Notes for Chapter 2	31
3 The Weil Algebra	33
3.1 The Koszul Complex	33
3.2 The Weil Algebra	34
3.3 Classifying Maps	37
3.4 W^* Modules	39
3.5 Bibliographical Notes for Chapter 3	40
4 The Weil Model and the Cartan Model	41
4.1 The Mathai-Quillen Isomorphism	41
4.2 The Cartan Model	44
4.3 Equivariant Cohomology of W^* Modules	46
4.4 $H((A \otimes E)_{\text{bas}})$ does not depend on E	48
4.5 The Characteristic Homomorphism	48
4.6 Commuting Actions	49

4.7	The Equivariant Cohomology of Homogeneous Spaces	50
4.8	Exact Sequences	51
4.9	Bibliographical Notes for Chapter 4	51
5	Cartan's Formula	53
5.1	The Cartan Model for W^* Modules	54
5.2	Cartan's Formula	57
5.3	Bibliographical Notes for Chapter 5	59
6	Spectral Sequences	61
6.1	Spectral Sequences of Double Complexes	61
6.2	The First Term	66
6.3	The Long Exact Sequence	67
6.4	Useful Facts for Doing Computations	68
6.4.1	Functorial Behavior	68
6.4.2	Gaps	68
6.4.3	Switching Rows and Columns	69
6.5	The Cartan Model as a Double Complex	69
6.6	$H_G(A)$ as an $S(g^*)^G$ -Module	71
6.7	Morphisms of G^* Modules	71
6.8	Restricting the Group	72
6.9	Bibliographical Notes for Chapter 6	75
7	Fermionic Integration	77
7.1	Definition and Elementary Properties	77
7.1.1	Integration by Parts	78
7.1.2	Change of Variables	78
7.1.3	Gaussian Integrals	79
7.1.4	Iterated Integrals	80
7.1.5	The Fourier Transform	81
7.2	The Mathai-Quillen Construction	85
7.3	The Fourier Transform of the Koszul Complex	88
7.4	Bibliographical Notes for Chapter 7	92
8	Characteristic Classes	95
8.1	Vector Bundles	95
8.2	The Invariants	96
8.2.1	$G = U(n)$	96
8.2.2	$G = O(n)$	97
8.2.3	$G = SO(2n)$	97
8.3	Relations Between the Invariants	98
8.3.1	Restriction from $U(n)$ to $O(n)$	99
8.3.2	Restriction from $SO(2n)$ to $U(n)$	100
8.3.3	Restriction from $U(n)$ to $U(k) \times U(\ell)$	100

8.4	Symplectic Vector Bundles	101
8.4.1	Consistent Complex Structures	101
8.4.2	Characteristic Classes of Symplectic Vector Bundles .	103
8.5	Equivariant Characteristic Classes	104
8.5.1	Equivariant Chern classes	104
8.5.2	Equivariant Characteristic Classes of a Vector Bundle Over a Point	104
8.5.3	Equivariant Characteristic Classes as Fixed Point Data	105
8.6	The Splitting Principle in Topology	106
8.7	Bibliographical Notes for Chapter 8	108
9	Equivariant Symplectic Forms	111
9.1	Equivariantly Closed Two-Forms	111
9.2	The Case $M = G$	112
9.3	Equivariantly Closed Two-Forms on Homogeneous Spaces	114
9.4	The Compact Case	115
9.5	Minimal Coupling	116
9.6	Symplectic Reduction	117
9.7	The Duistermaat-Heckman Theorem	120
9.8	The Cohomology Ring of Reduced Spaces	121
9.8.1	Flag Manifolds	124
9.8.2	Delzant Spaces	126
9.8.3	Reduction: The Linear Case	130
9.9	Equivariant Duistermaat-Heckman	132
9.10	Group Valued Moment Maps	134
9.10.1	The Canonical Equivariant Closed Three-Form on G	135
9.10.2	The Exponential Map	138
9.10.3	G -Valued Moment Maps on Hamiltonian G -Manifolds	141
9.10.4	Conjugacy Classes	143
9.11	Bibliographical Notes for Chapter 9	145
10	The Thom Class and Localization	149
10.1	Fiber Integration of Equivariant Forms	150
10.2	The Equivariant Normal Bundle	154
10.3	Modifying ν	156
10.4	Verifying that τ is a Thom Form	156
10.5	The Thom Class and the Euler Class	158
10.6	The Fiber Integral on Cohomology	159
10.7	Push-Forward in General	159
10.8	Localization	160
10.9	The Localization for Torus Actions	163
10.10	Bibliographical Notes for Chapter 10	168

11 The Abstract Localization Theorem	173
11.1 Relative Equivariant de Rham Theory	173
11.2 Mayer-Vietoris	175
11.3 $S(g^*)$ -Modules	175
11.4 The Abstract Localization Theorem	176
11.5 The Chang-Skjelbred Theorem	179
11.6 Some Consequences of Equivariant Formality	180
11.7 Two Dimensional G -Manifolds	180
11.8 A Theorem of Goresky-Kottwitz-MacPherson	183
11.9 Bibliographical Notes for Chapter 11	185
Appendix	189
Notions d'algèbre différentielle; application aux groupes de Lie et aux variétés où opère un groupe de Lie	
<i>Henri Cartan</i>	191
La transgression dans un groupe de Lie et dans un espace fibré principal	
<i>Henri Cartan</i>	205
Bibliography	221
Index	227

Supersymmetry and Equivariant de Rham Theory

Guillemin, V.W.; Sternberg, S. - Brüning, J. (Ed.)

1999, XXIII, 232 p., Hardcover

ISBN: 978-3-540-64797-3
