

CONTENTS

Chapter 1.	Introduction	1
Chapter 2.	Five-Membered Heterocycles with One Heteroatom	3
Chapter 3.	Benzo-Fused Five-Membered Heterocycles with One Heteroatom	181
Chapter 4.	Five-Membered Heterocycles with Two Heteroatoms	357
Chapter 5.	Five-Membered Heterocycles with More Than Two Heteroatoms	487
Chapter 6.	Meso-Ionic Heterocycles	579
	Subject Index	627

2	PYRROLES	33
2.1	General	33
2.1.1	Extraction	33
2.1.2	Ehrlich Test	34
2.2	Synthesis	34
2.2.1	Cyclization Reactions	34
2.2.1.1	(3 + 2) Cyclization Reactions	34
2.2.1.1.1	Reaction of α -Amino Ketones or α -Amino β -Keto Esters with β -Diketones or β -Keto Esters (Knorr Pyrrole Synthesis)	34
2.2.1.1.2	Reaction of α -Amino Ketones with Alkynes	36
2.2.1.1.3	Reaction of β -Amino- α,β -unsaturated Esters with Nitroalkenes	37
2.2.1.1.4	Reaction of α -Diketones with Amines	37
2.2.1.2	(2 + 2 + 1) Cyclization Reactions	38
2.2.1.2.1	Reaction of β -Keto Esters with α -Halo Ketones (Hantzsch Pyrrole Synthesis)	38
2.2.1.2.2	Reaction of Aldehydes or Ketones with Hydrazine (Piloty–Robinson Pyrrole Synthesis)	38
2.2.1.2.3	Reaction of Benzoin with Benzyl Aryl Ketones	38
2.2.1.2.4	Reaction of Aldehydes with Alkyl Isocyanoacetates	41
2.2.1.3	(4 + 1) Cyclization Reactions	41
2.2.1.3.1	Reaction of 1,4-Diketones with Ammonia or Ammonia Derivatives (Paal–Knorr Synthesis)	41
2.2.1.3.2	Reaction of 1,4-Dienes or Diynes with Amines	41
2.2.2	Ring Expansion Reactions	43
2.2.3	Extrusion Reactions	43
2.3	Structure	45
2.4	Basicity	46
2.5	Reactions	46
2.5.1	Protonation	46
2.5.2	Proton Exchange	47
2.5.3	Electrophilic Substitution Reactions	49
2.5.3.1	Orientation	50
2.5.3.2	Nitration	50
2.5.3.3	Halogenation	52
2.5.3.3.1	Chlorination	52
2.5.3.3.2	Bromination	52
2.5.3.3.3	Iodination	52
2.5.3.4	Sulfonation	54

2.5.3.5	Acylation	55
2.5.3.5.1	Houben–Hoesch Reaction	55
2.5.3.5.2	Gattermann Formylation	56
2.5.3.5.3	Vilsmeier–Haack Reaction	57
2.5.3.5.4	Friedel–Crafts Acylation	58
2.5.3.6	Alkylation	58
2.5.3.7	Hydroxymethylation (Mannich Reaction)	60
2.5.3.8	Reactions with Aldehydes and Ketones	60
2.5.3.9	Diazo Coupling	64
2.5.4	Reactions on Carbon and Nitrogen Anionic Species	65
2.5.4.1	Alkylation	66
2.5.4.2	Acylation	66
2.5.5	Nucleophilic Substitution Reactions	68
2.5.6	Oxidation	69
2.5.6.1	Autoxidation	69
2.5.6.2	Photo-oxidation	69
2.5.6.3	Oxidation with Chromium Trioxide	69
2.5.6.4	Oxidation with Hydrogen Peroxide	69
2.5.7	Reduction	71
2.5.7.1	Catalytic Hydrogenation	71
2.5.7.2	Reduction by Metal–Acid Systems (Chemical Reduction)	72
2.5.8	Reactions with Free Radicals	73
2.5.9	Reactions with Electron-Deficient Species	74
2.5.9.1	Reactions with Carbenes	74
2.5.9.2	Reactions with Nitrenes	77
2.5.10	Cycloaddition Reactions	77
2.5.10.1	$(4\pi + 2\pi)$ Reactions	77
2.5.10.1.1	Reactions with DMAD	78
2.5.10.1.2	Reactions with Benzyne	79
2.5.10.1.3	Reaction with Hexafluorobicyclo- [2.2.0]hexa-2,5-diene	80
2.5.10.2	$(2\pi + 2\pi)$ Reactions	80
3	FURANS	82
3.1	General	82
3.2	Synthesis	83
3.2.1	Commercial Method (From Aldopentoses or Ketopentoses)	83
3.2.2	From 1,4-Diketones	83
3.2.3	Cyclization of Alkynes	84
3.2.3.1	Photochemical Cyclization	84
3.2.3.2	From Alkynyl Sulfonium Salts	84
3.2.4	Cyclization of Ylides	85
3.2.4.1	Sulfur Ylides	85
3.2.4.2	Phosphorus Ylides	86
3.2.5	From α -Halocarbonyl Compounds (Feist–Benary Synthesis)	87
3.2.6	Ring Expansion of Small Ring Heterocycles	88

3.2.6.1	Three-Membered Heterocycles	88
3.2.6.2	Four-Membered Heterocycles	89
3.2.7	Transformation of Five-Membered Heterocycles	89
3.2.8	Ring Contraction	90
3.3	Structure	91
3.4	Reactions	92
3.4.1	Reactions with Electrophiles	92
3.4.1.1	Reactivity and Orientation Effects	92
3.4.1.2	Directing Effects of Substituents	93
3.4.1.3	Protonation	94
3.4.1.4	Nitration	96
3.4.1.5	Sulfonation	97
3.4.1.6	Halogenation	98
3.4.1.7	Alkylation	100
3.4.1.8	Acylation	102
3.4.1.9	Reactions with Aldehydes and Ketones	104
3.4.1.10	Reactions with Diazonium Salts	105
3.4.2	Reactions with Nucleophiles	105
3.4.3	Reactions with Free Radicals	108
3.4.4	Reactions with Electron-Deficient Species	111
3.4.5	Cycloaddition Reactions	112
3.4.6	Photochemical Reactions	118
4	THIOPHENES	121
4.1	General	121
4.1.1	Isolation	122
4.2	Synthesis	122
4.2.1	Intramolecular Cyclization Reactions	122
4.2.1.1	From 4-Aralkylthiocrotononitriles	122
4.2.1.2	From 3-Methylenethiopropenals	123
4.2.2	(4 + 1) Cyclization Reactions	124
4.2.2.1	From Hydrocarbons	124
4.2.2.2	From 1,4-Diketones (Paal Synthesis)	125
4.2.3	(3 + 2) Cyclization Reactions	126
4.2.3.1	Reaction of α,β -Unsaturated Carbonyl Compounds with Ethyl Mercaptoacetate	126
4.2.3.2	Reaction of Activated Alkynes with α -Mercapto Ketones or Esters	127
4.2.3.3	Reaction of Dimethyl Fumarate with Mercapto Esters	128
4.2.3.4	Reaction of α -Mercapto Ketones with Activated Methylene Nitriles (Gewald Synthesis)	129
4.2.3.5	Reaction of α -Diketones with Activated Methylene Compounds (Hinsberg Synthesis)	129
4.2.3.6	Reaction of Alkynes with Mesoionic Heterocycles	131
4.2.4	(2 + 2 + 1) Cyclization Reactions	131
4.3	Structure	132

4.4	Reactions	134
4.4.1	Reactions with Electrophiles	134
4.4.1.1	Electrophilic Substitutions at Carbon	134
4.4.1.1.1	Orientation	134
4.4.1.1.2	Directing Effects of Substituents	135
4.4.1.1.2.1	Substituents at Carbon-2	135
4.4.1.1.2.2	Substituents at Carbon-3	136
4.4.1.1.3	Protonation	136
4.4.1.1.4	Nitration	137
4.4.1.1.5	Sulfonation	140
4.4.1.1.6	Halogenation	141
4.4.1.1.6.1	Chlorination	141
4.4.1.1.6.2	Bromination	142
4.4.1.1.6.3	Iodination	144
4.4.1.1.7	Alkylation	144
4.4.1.1.8	Acylation	145
4.4.1.1.9	Reactions with Aldehydes and Ketones	148
4.4.1.1.10	Mercuration	149
4.4.1.1.11	Reactions with Diazonium Salts	150
4.4.1.2	Electrophilic Attack on Sulfur	151
4.4.2	Reactions with Oxidizing Agents	152
4.4.2.1	Formation of Thiophene Sulfoxides and Sulfones	152
4.4.2.2	Oxidative Ring Cleavage	153
4.4.2.3	Oxidation by Metal Ions	153
4.4.3	Reactions with Nucleophiles	154
4.4.3.1	Nucleophilic Attack at Carbon	154
4.4.3.1.1	Nucleophilic Substitutions	154
4.4.3.1.2	Halogen–Metal Exchange	156
4.4.3.2	Nucleophilic Attack at Hydrogen	158
4.4.3.2.1	Lithiation	158
4.4.3.3	Nucleophilic Ring Opening Reactions	159
4.4.4	Reactions with Reducing Agents	160
4.4.4.1	Catalytic Reduction	160
4.4.4.2	Birch Reduction	161
4.4.4.3	Reductive Desulfurization	161
4.4.5	Reactions with Free Radicals	161
4.4.6	Reactions with Electron-Deficient Species	164
4.4.6.1	Reactions with Carbenes	164
4.4.6.2	Reactions with Nitrenes	165
4.4.7	Cycloaddition Reactions	165
4.4.7.1	Thermal [4 + 2] Cycloaddition Reactions	165
4.4.7.2	Thermal [2 + 2] Cycloaddition Reactions	167
4.4.7.3	Photocycloaddition Reactions	168
4.4.8	Photosubstitution	170
4.4.9	Photoisomerization	171

CHAPTER 3

BENZO-FUSED FIVE-MEMBERED HETEROCYCLES WITH ONE HETEROATOM

CONTENTS

1	GENERAL	187
1.1	Reactivity	188
1.2	Orientation	188
1.3	Dibenzoheterocycles	189
2	BENZOPYRROLES	190
2.1	Indoles	191
2.1.1	General	191
2.1.2	Synthesis	194
2.1.2.1	Reaction of <i>o</i> -Nitrotoluene with Diethyl Oxalate (Reissert Indole Synthesis)	194
2.1.2.2	From <i>o</i> -Nitrophenylnitroethylene (<i>o</i> , ω -Dinitrostyrene)	195
2.1.2.3	Palladium Catalyzed Cyclization	196
2.1.2.4	Madelung Indole Synthesis	196
2.1.2.5	Isonitrile Cyclization	197
2.1.2.6	Bischler Indole Synthesis	198
2.1.2.7	Fischer Indole Synthesis	199
2.1.2.8	Gassman Indole Synthesis	203
2.1.2.9	Nenitzescu Indole Synthesis	203
2.1.2.10	From Pyrroles	206
2.1.2.11	From Azirines	207
2.1.3	Structure	208
2.1.4	Reactions	208

2.1.4.1	Reactions with Electrophiles	209
2.1.4.1.1	Protonation	210
2.1.4.1.1.1	Reaction with Proton Acids	210
2.1.4.1.1.2	Basicity	211
2.1.4.1.1.3	H \rightleftharpoons D Exchange	211
2.1.4.1.1.4	Dimerization and Trimerization	212
2.1.4.1.2	Nitration	212
2.1.4.1.3	Nitrosation	215
2.1.4.1.4	Halogenation	216
2.1.4.1.4.1	Chlorination	216
2.1.4.1.4.2	Bromination	218
2.1.4.1.4.3	Iodination	218
2.1.4.1.5	Sulfonation	220
2.1.4.1.6	Acylation	221
2.1.4.1.6.1	Friedel–Crafts Acylation	221
2.1.4.1.6.2	Vilsmeier–Haack Formylation	222
2.1.4.1.7	Alkylation	224
2.1.4.1.8	Reactions with Aldehydes and Ketones	224
2.1.4.1.8.1	Ehrlich Test	224
2.1.4.1.8.2	With Aromatic Aldehydes and Ketones	225
2.1.4.1.8.3	With Aliphatic Aldehydes and Ketones	225
2.1.4.1.8.4	With α,β -Unsaturated Ketones	227
2.1.4.1.9	Mannich Reaction	227
2.1.4.2	Reactions on Carbon and Nitrogen Anionic Species	228
2.1.4.2.1	Alkylation	229
2.1.4.2.2	Acylation	231
2.1.4.3	Reactions with Nucleophiles	232
2.1.4.4	Oxidation	233
2.1.4.5	Reduction	234
2.1.4.6	Reactions with Electron-Deficient Species	237
2.1.4.7	Reactions with Free Radicals	238
2.1.4.8	Cycloaddition Reactions	239
2.2	Isoindoles (Benzo[c]pyrroles)	240
2.2.1	General	240
2.2.2	Synthesis	242
2.2.2.1	Cyclization Reactions	242
2.2.2.1.1	From α -Bromo- <i>o</i> -toluic Acid	242
2.2.2.1.2	From N-Cyanomethyl-N-methyl- <i>o</i> -chlorobenzylamine	243

2.2.2.1.3	From 1,4-Diketones	243
2.2.2.2	Extrusion Reaction	243
2.2.2.3	Ring Transformation Reactions	244
2.2.2.3.1	From Phthalimidines	244
2.2.2.3.2	From Isoindolines	245
2.2.2.3.3	From Pyrroles	247
2.2.3	Reactions	247
2.2.3.1	Reactions with Electrophiles	247
2.2.3.1.1	Protonation	248
2.2.3.1.2	Nitrosation	249
2.2.3.1.3	Acylation	249
2.2.3.1.4	Alkylation	249
2.2.3.1.5	Formylation	250
2.2.3.1.6	Reactions with Aldehydes and Ketones (Ehrlich Test)	250
2.2.3.2	Oxidation	251
2.2.3.3	Reduction	252
2.2.3.4	Cycloaddition Reactions	253
2.3	Indolizines (Pyrrocolines)	254
2.3.1	General	254
2.3.2	Synthesis	255
2.3.2.1	Reaction of Pyridines with α -Halocarbonyl Compounds (Tschitschibabin Reaction)	255
2.3.2.2	Reaction of Pyridine with Alkynic Compounds	257
2.3.2.3	Reaction of 2-Pyridyllithium with 2-Chloromethyloxirane	258
2.3.2.4	1,3-Dipolar Cycloaddition Reactions	258
2.3.3	Structure	259
2.3.4	Reactions	260
2.3.4.1	Reactions with Electrophiles	260
2.3.4.1.1	Protonation	261
2.3.4.1.2	Nitration	262
2.3.4.1.3	Nitrosation	262
2.3.4.1.4	Alkylation	263
2.3.4.1.5	Acylation	264
2.3.4.1.6	Reactions with Aldehydes and Ketones	264
2.3.4.2	Oxidation	264
2.3.4.3	Reduction	265
2.3.4.4	Cycloaddition Reactions	266
2.4	Carbazoles (Dibenzopyrroles)	267
2.4.1	General	267
2.4.2	Synthesis	268

2.4.2.1	From Cyclohexanone Phenylhydrazones (Borsche Synthesis or Modified Fischer Indole Synthesis)	268
2.4.2.2	Reaction of Anilines with α -Halocyclohexanones	268
2.4.2.3	From Diarylamines	269
2.4.2.3.1	Oxidative Cyclization	269
2.4.2.3.2	Photochemical Cyclization	270
2.4.2.4	Reductive Cyclization of <i>o</i> -Nitrobiphenyls	271
2.4.2.5	From <i>o</i> -Azidobiphenyls	271
2.4.2.6	From 1-Arylbenzotriazoles (Graebe-Ullmann Synthesis)	272
2.4.2.7	Nenitzescu Reaction	272
2.4.2.8	Annellation of Indoles	272
2.4.3	Structure	273
2.4.4	Reactions	274
2.4.4.1	Reactions with Electrophiles	274
2.4.4.1.1	Protonation	274
2.4.4.1.2	Nitration	275
2.4.4.1.3	Nitrosation	275
2.4.4.1.4	Chlorination	276
2.4.4.1.5	Bromination	276
2.4.4.1.6	Sulfonation	276
2.4.4.1.7	Acylation	277
2.4.4.2	Oxidation	278
2.4.4.3	Reduction	278
2.4.4.4	Reactions with Nucleophiles	279
3	BENZOFURANS	279
3.1	General	279
3.2	Benzo[<i>b</i>]furans	282
3.2.1	Synthesis	282
3.2.1.1	Intramolecular Cyclization of <i>o</i> -Substituted Phenols	282
3.2.1.2	Cyclodehydration of α -Aryloxyketones	283
3.2.1.3	Reaction of <i>o</i> -Acylphenols with α -Halo Ketones and Esters	284
3.2.1.4	Reaction of <i>o</i> -Acylphenols with Dimethylsulfoxonium Methylide	285
3.2.1.5	From <i>p</i> -Benzoquinones	286
3.2.1.6	Ring Contraction (From Coumarins)	287
3.2.2	Structure	287
3.2.3	Reactions	288
3.2.3.1	Reactions with Electrophiles	288
3.2.3.1.1	Reactivity and Orientation	288
3.2.3.1.2	Directing Effects of Substituents	289

3.2.3.1.3	Protonation	289
3.2.3.1.4	Nitration	289
3.2.3.1.5	Sulfonation	291
3.2.3.1.6	Halogenation	291
3.2.3.1.6.1	Bromination	292
3.2.3.1.6.2	Chlorination	293
3.2.3.1.7	Acylation	293
3.2.3.1.8	Alkylation	294
3.2.3.1.9	Reaction with Diazonium Salts	295
3.2.3.2	Reactions with Nucleophiles	295
3.2.3.3	Oxidation	297
3.2.3.4	Reduction	298
3.2.3.5	Reactions with Electron-Deficient Species	299
3.2.3.6	Cycloaddition Reactions	300
3.2.3.7	Photochemical Reactions	300
3.2.3.7.1	Photodimerization	300
3.2.3.7.2	Photosensitized Cycloaddition	301
3.2.3.7.3	Photooxygenation	301
3.3	Benzo[c]furans	302
3.3.1	General	302
3.3.2	Synthesis	302
3.3.2.1	Retro-Diels–Alder Reaction	302
3.3.2.2	Reductive Cyclization of o-Dibenzoylbenzenes	303
3.3.2.3	Reaction of Dibenzoylacetylene with Dienes	303
3.3.2.4	From Benzophenones	304
3.3.3	Reactions	305
3.3.3.1	Cycloaddition Reactions	305
3.3.3.2	Photochemical Reactions	307
3.3.3.2.1	Photodimerization	307
3.3.3.2.2	Photocycloaddition	307
3.3.3.2.2.1	With Cycloheptatriene	307
3.3.3.2.2.2	With Cyclohexadiene	308
3.3.3.2.3	Photooxygenation	308
3.3.3.3	Oxidation	309
3.3.3.4	Reduction	309
3.4	Dibenzofurans	309
3.4.1	General	309
3.4.2	Synthesis	310
3.4.2.1	From 2,2'-Dihydroxybiphenyls	310
3.4.2.2	From Diphenyl Ethers	310
3.4.2.3	From o-Aminodiphenyl Ethers (Pschorr Type Cyclization)	311
3.4.2.4	Wittig Reaction	312
3.4.3	Reactions	312

3.4.3.1	Reactions with Electrophiles	312
3.4.3.1.1	Bromination	313
3.4.3.1.2	Nitration	314
3.4.3.1.3	Formylation	316
3.4.3.1.4	Sulfonation	316
3.4.3.2	Metallation (Lithiation)	316
3.4.3.3	Reactions with Nucleophiles	318
3.4.3.4	Reduction	319
4	BENZOTHIOPHENES	320
4.1	General	320
4.2	Benzo[<i>b</i>]thiophenes	321
4.2.1	General	321
4.2.2	Synthesis	322
4.2.2.1	Oxidative Cyclization of Mercaptocinnamic Acids	322
4.2.2.2	Reaction of Cinnamic Acid with Thionyl Chloride	323
4.2.2.3	Dehydrative Cyclization	323
4.2.2.3.1	From Arylthioacetaldehyde Acetals	323
4.2.2.3.2	From Arylthio Methyl Ketones	324
4.2.2.4	Reaction of Mercaptoaldehyde or Acid with α -Halo Acids or Ketones	324
4.2.2.5	From Benzenethiols (Thiophenols)	325
4.2.2.6	From Thiophene-2,3-dicarboxylic Anhydride	326
4.2.3	Reactions	327
4.2.3.1	Reactions with Electrophiles	327
4.2.3.1.1	Electrophilic Attack at Carbon	327
4.2.3.1.1.1	Orientation	327
4.2.3.1.1.2	Directing Effects of Substituents	328
4.2.3.1.1.3	Nitration	328
4.2.3.1.1.4	Halogenation	328
4.2.3.1.1.5	Sulfonation	329
4.2.3.1.1.6	Alkylation	330
4.2.3.1.1.7	Acylation	331
4.2.3.1.1.8	Diazo Coupling	331
4.2.3.1.2	Electrophilic Attack at Sulfur	332
4.2.3.2	Reactions with Oxidizing Agents	333
4.2.3.2.1	Formation of 1-Oxides and 1,1-Dioxides	333
4.2.3.2.2	Oxidative Ring Opening	334
4.2.3.3	Reactions with Nucleophiles	334
4.2.3.3.1	Metallation	334
4.2.3.3.2	Ring Opening by Nucleophiles	335
4.2.3.3.3	Addition of Nucleophiles	335
4.2.3.4	Reactions with Reducing Agents	335

4.2.3.5	Reactions with Carbenes	336
4.2.3.6	Cycloaddition Reactions	337
4.2.3.6.1	Thermal(2 + 2)Cycloaddition Reactions	337
4.2.3.6.2	Photochemical(2 + 2)Cycloaddition Reactions	337
4.2.3.7	Photosubstitution	338
4.3	Benzo[<i>c</i>]thiophenes	339
4.3.1	General	339
4.3.2	Synthesis	339
4.3.2.1	From 1,4-Diketones	339
4.3.2.2	From <i>o</i> -Bis(chloromethyl) benzene	340
4.3.2.3	Ring Contraction of 1,2-Dithiins	341
4.3.2.4	Annelation of Thiophenes	341
4.3.3	Reactions	341
4.3.3.1	Cycloaddition Reactions	341
4.3.3.2	Oxidative Ring Opening Reactions	342
4.4	Dibenzothiophenes	343
4.4.1	General	343
4.4.2	Synthesis	344
4.4.2.1	Oxidative Cyclization of Diphenyl Sulfides	344
4.4.2.2	Reductive Cyclization of Diphenyl Sulfoxide	344
4.4.2.3	From Biphenyls	344
4.4.2.4	From Diphenyl sulfones	345
4.4.2.5	From 2-Allylbenzo[<i>b</i>]thiophenes	345
4.4.3	Reactions	346
4.4.3.1	Reactions with Electrophiles	346
4.4.3.2	Reactions with Nucleophiles	346
4.4.3.3	Oxidation	347

CHAPTER 4

FIVE-MEMBERED HETEROCYCLES WITH TWO HETEROATOMS

CONTENTS

1	GENERAL	363
1.1	Structures	364
1.2	Basicity	365
1.3	Structure versus Chemical Reactivity (Consequences of Additional Nitrogen Atom)	367
1.3.1	Reactions with Electrophiles	367
1.3.1.1	Electrophilic Attack at Carbon	367
1.3.1.1.1	Orientation	367
1.3.1.1.1.1	1,3-Azoles	368
1.3.1.1.1.2	1,2-Azoles	369
1.3.1.2	Electrophilic Attack at Nitrogen-3	370
1.3.2	Reactions with Nucleophiles	371
1.3.2.1	Nucleophilic Attack at Carbon	371
1.3.2.2	Nucleophilic Attack at Hydrogen (Deprotonation)	372
2	1,3-AZOLES	374
2.1	Imidazoles	375
2.1.1	General	375
2.1.2	Synthesis	377
2.1.2.1	Reaction of α -Hydroxy- or α -Halo Ketones with Amidines	377
2.1.2.2	Reaction of α -Amino Ketones with Cyanates, Thiocyanates or Isothiocyanates (Marckwald Synthesis)	378

2.1.2.3	Reaction of α -Diketones, α -Hydroxy-, α -Halo- or α -Amino Ketones with Formamide (Formamide Synthesis)	378
2.1.2.4	Reaction of Oxamide with Phosphorus Oxychloride (Wallach Synthesis)	379
2.1.2.5	Reaction of Arylaldoximes with Propiolate Ester	380
2.1.2.6	Reaction of 1,2-Diaminoalkanes with Carboxylic Acids and Aldehydes or Ketones	380
2.1.2.7	Ring Transformation (From Oxazoles)	381
2.1.2.8	Ring Contraction (From Pyrazines)	381
2.1.3	Structure	382
2.1.3.1	Hydrogen Bonding	383
2.1.3.2	Tautomerism	383
2.1.4	Reactions	384
2.1.4.1	Reactivity	384
2.1.4.2	Reactions with Electrophiles	385
2.1.4.2.1	Electrophilic Attack at Nitrogen	385
2.1.4.2.1.1	Protonation (Basicity)	385
2.1.4.2.1.2	N-Alkylation	386
2.1.4.2.1.3	N-Acylation	387
2.1.4.2.2	Electrophilic Attack at Carbon	388
2.1.4.2.2.1	Orientation	388
2.1.4.2.2.2	Nitration	389
2.1.4.2.2.3	Sulfonation	390
2.1.4.2.2.4	Halogenation	390
2.1.4.2.2.5	Acylation	391
2.1.4.2.2.6	Diazo Coupling	392
2.1.4.2.2.7	Reactions with Aldehydes and Ketones	393
2.1.4.2.2.8	Oxidation	394
2.1.4.3	Reactions with Nucleophiles	394
2.1.4.3.1	Nucleophilic Attack at Carbon	394
2.1.4.3.2	Nucleophilic Attack at Hydrogen (Deprotonation)	396
2.1.4.3.2.1	Deprotonation of NH (Acidity)	396
2.1.4.3.2.2	Deprotonation of Carbon-2	396
2.1.4.3.2.2.1	$H \rightleftharpoons D$ Exchange	397
2.1.4.3.2.2.2	Metallation	397
2.1.4.3.2.2.3	C-Acylation via Deprotonation	398
2.1.4.4	Reactions with Electron-Deficient Species	398
2.1.4.5	Reactions with Dienophiles	399
2.1.4.6	Photochemical Cycloaddition Reactions	399

2.2	Oxazoles	401
2.2.1	General	401
2.2.2	Synthesis	402
2.2.2.1	Cyclodehydration of α -Acylamino Ketones (Robinson–Gabriel Synthesis)	402
2.2.2.2	Reaction of α -Halo Ketones with Primary Amides (Blümlein–Lewy Synthesis)	402
2.2.2.3	Reaction of α -Hydroxyamino Ketones with Aldehydes	402
2.2.2.4	Reaction of Tosylmethyl Isocyanide with Aldehydes	403
2.2.2.5	Reaction of α -Metallated Isocyanides with Acid Derivatives	403
2.2.2.6	Ring Transformations	404
2.2.2.6.1	From C-Acylaziridines	404
2.2.2.6.2	From Isoxazoles (Isomerization)	405
2.2.3	Structure	405
2.2.4	Reactions	406
2.2.4.1	Reactivity	406
2.2.4.2	Reactions with Electrophiles	407
2.2.4.2.1	Electrophilic Attack at Nitrogen	407
2.2.4.2.1.1	Protonation (Basicity)	407
2.2.4.2.1.2	N-Alkylation	407
2.2.4.2.2	Electrophilic Attack at Carbon	408
2.2.4.2.2.1	Bromination	408
2.2.4.2.2.2	Mercuration	409
2.2.4.2.2.3	Vilsmeier–Haack Formylation	409
2.2.4.3	Reactions with Nucleophiles	410
2.2.4.3.1	Nucleophilic Attack at Carbon	410
2.2.4.3.2	Nucleophilic Attack at Hydrogen	411
2.2.4.3.2.1	Metallation	411
2.2.4.3.2.2	$H \rightleftharpoons D$ Exchange	412
2.2.4.4	Thermal Reactions (Cornforth Rearrangement)	413
2.2.4.5	Photochemical Reactions	413
2.2.4.6	Cycloaddition Reactions	414
2.2.4.7	Photooxygenation	415
2.3	Thiazoles	416
2.3.1	General	416
2.3.2	Synthesis	417
2.3.2.1	Synthesis of Thiazoles	417
2.3.2.1.1	Reaction of α -halo Ketones with Thioamides (Hantzsch's Synthesis)	417
2.3.2.1.2	Reaction of α -Acylamino Ketones with Phosphorus Pentasulfide (Gabriel Synthesis)	418

2.3.2.1.3	From α -Aminonitriles (Cook–Heilborn’s Synthesis)	418
2.3.2.1.4	From α -Thiocyano Ketones (Tcherniac’s Synthesis)	419
2.3.2.1.5	Reaction of α -Mercapto Ketones or α -Mercapto Acids with Nitriles	419
2.3.2.2	Synthesis of Benzothiazoles	421
2.3.2.2.1	Synthesis from <i>o</i> -Aminothiophenols (2-Aminobenzenethiols)	421
2.3.2.2.1.1	Reaction with Aldehydes	421
2.3.2.2.1.2	Reaction with 1,2-Diketones	421
2.3.2.2.1.3	Reaction with Acids and Acid Derivatives	422
2.3.2.2.2	From Arylthioureas (Hugershoff’s Method)	422
2.3.3	Structure	422
2.3.4	Reactions	423
2.3.4.1	Reactions with Electrophiles	423
2.3.4.1.1	Electrophilic Attack at Nitrogen	423
2.3.4.1.1.1	Basicity	424
2.3.4.1.1.2	N-Alkylation (Reaction with Alkyl Halides)	424
2.3.4.1.2	Electrophilic Attack at Carbon	425
2.3.4.1.2.1	Nitration	425
2.3.4.1.2.2	Sulfonation	425
2.3.4.1.2.3	Halogenation	426
2.3.4.1.2.4	Alkylation	427
2.3.4.1.2.5	Mercuration	427
2.3.4.1.2.6	Diazo Coupling	427
2.3.4.2	Condensation Reactions	428
2.3.4.3	Oxidation	429
2.3.4.4	Desulfurization	430
2.3.4.5	Reactions with Nucleophiles	430
2.3.4.5.1	Nucleophilic Attack at Carbon	430
2.3.4.5.1.1	Amination	430
2.3.4.5.1.2	Ring Cleavage	431
2.3.4.5.1.3	Displacement of Halide	431
2.3.4.5.1.4	Metal–Halogen Exchange	432
2.3.4.5.2	Nucleophilic Attack at Hydrogen	432
2.3.4.5.2.1	Metallation	432
2.3.4.5.2.2	$H \rightleftharpoons D$ Exchange	433
2.3.4.6	Photochemical Rearrangements	434
3	1,2-AZOLES	435
3.1	Pyrazoles	435
3.1.1	General	435
3.1.2	Synthesis	436

3.1.2.1	(3 + 2) Cyclization Reactions	436
3.1.2.1.1	Reaction of β -Diketones with Hydrazines	436
3.1.2.1.2	Reaction of α,β -Unsaturated Carbonyl Compounds with Hydrazines	437
3.1.2.2	1,3-Dipolar Cycloadditions	439
3.1.3	Structure	440
3.1.3.1	Hydrogen bonding	441
3.1.3.2	Tautomerism	441
3.1.4	Reactions	442
3.1.4.1	Reactivity	442
3.1.4.2	Electrophilic Attack at Nitrogen	443
3.1.4.2.1	Basicity	443
3.1.4.2.2	Acidity	443
3.1.4.2.3	N-Alkylation	443
3.1.4.2.4	N-Acylation	443
3.1.4.2.5	Michael Addition	445
3.1.4.3	Electrophilic Attack at Carbon	445
3.1.4.3.1	Reactivity and Orientation	445
3.1.4.3.2	Nitration	447
3.1.4.3.3	Sulfonation	448
3.1.4.3.4	Halogenation	449
3.1.4.3.5	Mercuration	449
3.1.4.3.6	Diazo Coupling	450
3.1.4.4	Oxidation	450
3.1.4.5	Reduction	451
3.1.4.6	Reactions with Nucleophiles	451
3.1.4.6.1	Nucleophilic Attack at Carbon	451
3.1.4.6.2	Nucleophilic Attack at Hydrogen	452
3.1.4.6.2.1	Metallation	452
3.1.4.6.2.2	Ring Cleavage via Deprotonation	452
3.1.4.7	Reactions with Electron-Deficient Species	453
3.1.4.8	Cycloaddition Reactions	453
3.1.4.9	Photochemical Transformation	454
3.2	Isoxazoles	455
3.2.1	General	455
3.2.2	Synthesis	458
3.2.2.1	Reaction of β -Diketones with Hydroxylamine	458
3.2.2.2	Reaction of Nitrile N-Oxides with Alkenes and Alkynes	459
3.2.3	Reactions	460
3.2.3.1	Reactivity	460
3.2.3.2	Reactions with Electrophiles	461
3.2.3.2.1	Electrophilic Attack at Nitrogen	461
3.2.3.2.1.1	Basicity	461

	3.2.3.2.1.2	N-Alkylation	461
	3.2.3.2.2	Electrophilic Attack at Carbon	461
	3.2.3.2.2.1	H \rightleftharpoons D Exchange	462
	3.2.3.2.2.2	Nitration	463
	3.2.3.2.2.3	Sulfonation	464
	3.2.3.2.2.4	Halogenation	465
	3.2.3.2.2.5	Chloromethylation and Hydroxymethylation	466
	3.2.3.2.2.6	Mercuration	466
	3.2.3.3	Oxidation	467
	3.2.3.4	Reactions with Nucleophiles	468
	3.2.3.4.1	Nucleophilic Displacement	468
	3.2.3.4.2	Ring Cleavage via C-Deprotonation	468
	3.2.3.4.3	Reductive Ring Cleavage	471
	3.2.3.5	Condensation Reactions	471
	3.2.3.6	Rearrangement	472
	3.2.3.7	Photochemical and Thermal Reactions	472
3.3		Isothiazoles	473
	3.3.1	General	473
	3.3.2	Synthesis	474
	3.3.2.1	Oxidative Cyclization of γ -Iminothiols	474
	3.3.2.2	Ring Transformation	475
	3.3.2.3	From Alkenes	476
	3.3.2.4	From α,β -Unsaturated Carbonyl Compounds	476
	3.3.3	Structure	477
	3.3.4	Reactions	478
	3.3.4.1	Reactions with Electrophiles	478
	3.3.4.1.1	Nitration	478
	3.3.4.1.2	Sulfonation	479
	3.3.4.1.3	N-Alkylation	479
	3.3.4.2	Side Chain Reactivity	480
	3.3.4.2.1	Reaction with Aromatic Aldehydes	480
	3.3.4.2.2	Decarboxylation	480
	3.3.4.3	Reactions with Nucleophiles	480
	3.3.4.3.1	Nucleophilic Substitutions	480
	3.3.4.3.2	Ring Transformation	481
	3.3.4.3.3	Lithiation	482
	3.3.4.3.4	Ring Cleavage	482
	3.3.4.4	Photochemical Transformation	482
	3.3.4.5	Oxidation	483

CHAPTER 5

FIVE-MEMBERED HETEROCYCLES WITH MORE THAN TWO HETEROATOMS

CONTENTS

1	GENERAL	491
1.1	Effects of Additional Nitrogen Atoms	492
2	TRIAZOLES AND TETRAZOLES	492
2.1	1,2,3-Triazoles	492
2.1.1	General	492
2.1.2	Synthesis	493
2.1.2.1	Oxidative Cyclization of bis-Hydrazones of α -Diketones	493
2.1.2.2	Cycloaddition of Azides with Alkynes	494
2.1.3	Reactions	495
2.1.3.1	Amphoteric Nature	495
2.1.3.2	Electrophilic Substitutions	496
2.1.3.2.1	Alkylation	497
2.1.3.2.2	Acylation	498
2.1.3.2.3	Bromination	498
2.1.3.3	Thermal and Photochemical Reactions	499
2.1.3.4	Dimroth Rearrangement	501
2.1.3.5	Ring Cleavage Reactions	502
2.2	1,2,4-Triazoles	503
2.2.1	General	503
2.2.2	Synthesis	504
2.2.2.1	From Hydrazine Derivatives	504
2.2.2.2	From Nitrilimines	505
2.2.3	Structure	506

2.2.4	Reactions	506
2.2.4.1	Acidity–Basicity	506
2.2.4.2	Reactivity	507
2.2.4.2.1	Reactions with Electrophiles	508
2.2.4.2.1.1	Electrophilic Attack at Nitrogen	508
2.2.4.2.1.2	Quaternization	509
2.2.4.2.1.3	Electrophilic Attack at Carbon	509
2.2.4.2.2	Reactions with Nucleophiles	510
2.2.4.2.3	Reactions with Electron-Deficient Species	511
2.2.4.2.3.1	Reactions with Nitrenes	511
2.2.4.2.3.2	Reactions with Carbenes	511
2.2.4.2.4	Oxidation	512
2.2.4.2.5	Thermal and Photochemical Reactions	512
2.3	Tetrazoles	513
2.3.1	General	513
2.3.2	Synthesis	513
2.3.2.1	From Imidoyl Chlorides	513
2.3.2.2	From Amidrazones	515
2.3.2.3	From Nitriles	516
2.3.2.4	From Nitrilium Salts	516
2.3.2.5	From Isonitriles	517
2.3.3	Structure	517
2.3.3.1	Hydrogen Bonding	518
2.3.4	Reactions	519
2.3.4.1	Reactions with Electrophiles	519
2.3.4.2	Reactions with Nucleophiles	520
2.3.4.2.1	Nucleophilic Attack at Hydrogen	520
2.3.4.2.1.1	Acidity	520
2.3.4.2.1.2	H \rightleftharpoons D Exchange	521
2.3.4.2.1.3	Metallation	521
2.3.4.2.2	Nucleophilic Attack at C-5 (Nucleophilic Substitutions)	522
2.3.4.3	Thermal and Photochemical Reactions	522
2.3.4.3.1	Reactions Involving Nitrilimine Intermediates	522
2.3.4.3.2	Reactions Involving Carbene Intermediates	524
2.3.4.3.3	Reactions involving Nitrene Intermediates	524
2.3.4.4	Rearrangements	525
3	OXADIAZOLES	525
3.1	1,2,3-Oxadiazoles	526
3.2	1,2,4-Oxadiazoles	527
3.2.1	General	527
3.2.2	Synthesis	528
3.2.2.1	Cyclization Reactions (From Amidoximes)	528

3.2.2.2	1,3-Dipolar Cycloadditions	528
3.2.3	Structure	529
3.2.4	Reactions	529
3.2.4.1	Electrophilic Substitution Reactions	529
3.2.4.2	Nucleophilic Substitution Reactions	530
3.2.4.3	Reactions of Substituents	530
3.2.4.4	Reduction	531
3.2.4.5	Ring Cleavage via C-Deprotonation	532
3.2.4.6	Photochemical Reactions	532
3.2.4.7	Rearrangements	533
3.3	1,2,5-Oxadiazoles	533
3.3.1	General	533
3.3.2	Synthesis	534
3.3.2.1	Furazans	534
3.3.2.1.1	Dehydration of α -Dioximes	534
3.3.2.1.2	Ring Transformations	534
3.3.2.2	Furoxans	535
3.3.2.2.1	Oxidation of α -Dioximes	535
3.3.2.2.2	Dehydration of α -Nitro Ketone Oximes	536
3.3.3	Structure	536
3.3.4	Reactions	537
3.3.4.1	Reactions with Electrophiles	537
3.3.4.2	Reactions with Nucleophiles	537
3.3.4.3	Ring Cleavage via C-Deprotonation	538
3.3.4.4	Rearrangements	539
3.3.4.5	Thermal and Photochemical Reactions	539
3.4	1,3,4-Oxadiazoles	540
3.4.1	General	540
3.4.2	Synthesis	541
3.4.2.1	From Diacylhydrazines	541
3.4.2.2	Ring Transformation	541
3.4.3	Structure	542
3.4.4	Reactions	543
3.4.4.1	Reactions with Electrophiles	543
3.4.4.2	Reactions with Nucleophiles	544
3.4.4.2.1	Nucleophilic Substitution Reactions	544
3.4.4.2.2	Nucleophilic Attack with Ring Cleavage	545
3.4.4.3	Thermal and Photochemical Reactions	546
4	THIADIAZOLES	547
4.1	1,2,3-Thiadiazoles	547
4.1.1	General	547
4.1.2	Synthesis	547
4.1.2.1	Pachmann and Nold Synthesis	547
4.1.2.2	Hurd-Mori's Classical Synthesis (From Hydrazones)	548

4.1.3	Structure	549
4.1.4	Reactions	549
4.1.4.1	Reactions with Electrophiles	549
4.1.4.1.1	Electrophilic Attack at Nitrogen	549
4.1.4.2	Reactions with Nucleophiles	550
4.1.4.2.1	Nucleophilic Substitutions	550
4.1.4.2.2	Ring Cleavage via C-Deprotonation	550
4.1.4.2.3	Nucleophilic Attack at Sulfur	551
4.1.4.3	Oxidation	551
4.1.4.4	Thermal and Photochemical Reactions	552
4.1.4.4.1	Thermal Reactions	552
4.1.4.4.2	Photochemical Reactions	552
4.1.4.4.3	Rearrangements	553
4.2	1,2,4-Thiadiazoles	553
4.2.1	General	553
4.2.2	Synthesis	554
4.2.2.1	Oxidative Cyclization of Thioacylamidines	554
4.2.2.2	From Amidines	554
4.2.2.3	Heterocyclic Ring Transformations (Oxazole and Oxadiazole Rearrangements)	555
4.2.3	Structure	557
4.2.4	Reactions	557
4.2.4.1	Reactivity	557
4.2.4.2	Reactions with Electrophiles	557
4.2.4.3	Reactions with Nucleophiles	559
4.2.4.3.1	Nucleophilic Substitution Reactions	559
4.2.4.3.2	Ring Cleavage	560
4.2.4.3.2.1	Nucleophilic Attack at Carbon	560
4.2.4.3.2.2	Nucleophilic Attack at Sulfur	560
4.2.4.3.3	Nucleophilic Attack at Hydrogen	560
4.2.4.4	Reduction	561
4.3	1,2,5-Thiadiazoles	561
4.3.1	General	561
4.3.2	Synthesis	562
4.3.2.1	From <i>o</i> -Diamines [(4 + 1) Cyclization]	562
4.3.3	Structure	563
4.3.4	Reactions	563
4.3.4.1	Stability	563
4.3.4.2	Reactions with Electrophiles	564
4.3.4.3	Reactions with Nucleophiles	564
4.4	1,3,4-Thiadiazoles	566
4.4.1	General	566
4.4.2	Synthesis	567

4.4.2.1	From Thiosemicarbazides	567
4.4.2.2	From Dimethylformamide	568
4.4.2.3	From Hydrazine	568
4.4.3	Structure	569
4.4.4	Reactions	569
4.4.4.1	Reactivity	569
4.4.4.2	Reactions with Electrophiles	569
4.4.4.2.1	Electrophilic Attack at Nitrogen (Quaternization)	569
4.4.4.2.2	Electrophilic Attack at Carbon	570
4.4.4.3	Reactions with Nucleophiles	570
4.4.4.3.1	H \rightleftharpoons D Exchange	570
4.4.4.3.2	Ring Cleavage via C-Deprotonation	570
4.4.4.3.3	Amination	571
4.4.4.3.4	Nucleophilic Substitutions	571
4.4.4.4	Reactions Involving Ring Formation	572

CHAPTER 6

MESO-IONIC HETEROCYCLES

CONTENTS

1	GENERAL	581
2	CLASSIFICATION	583
3	CHEMISTRY OF MESO-IONIC HETEROCYCLES	584
3.1	Chemistry of Meso-Ionic Heterocycles of Type-A	584
3.1.1	1,3-Oxazolium-4-olates	585
3.1.1.1	Synthesis	585
3.1.1.1.1	From α -Diazoimides (Diazo Ketones)	585
3.1.1.1.2	From Imides	585
3.1.1.2	Reactions	585
3.1.2	1,3-Oxazolium-5-olates (Münchnones)	587
3.1.2.1	Synthesis	587
3.1.2.1.1	From N-Acylamino Acids	587
3.1.2.2	Reactions	588
3.1.2.2.1	Cycloaddition Reactions	588
3.1.2.2.1.1	Reactions with Alkenes and Related Compounds	588
3.1.2.2.1.2	Reactions with Alkynes	592
3.1.2.2.1.3	Reactions with Carbonyl Compounds	593
3.1.2.2.1.4	Reaction with Carbon Disulfide	594
3.1.2.2.1.5	Reactions with Isothiocyanates and Isocyanates	594
3.1.2.2.2	Reactions with Nucleophiles	595

3.1.2.2.3	Reactions with Small Ring Heterocycles	596
3.1.2.2.4	Photochemical Reactions	596
3.1.3	1,3-Oxathiolium-4-olates	597
3.1.3.1	Synthesis	597
3.1.3.2	Reactions	598
3.1.4	1,3-Oxathiolium-5-olates	598
3.1.4.1	Synthesis	599
3.1.4.2	Reactions	599
3.1.5	1,3-Diazolium-4-olates	600
3.1.5.1	Synthesis	600
3.1.5.1.1	From Amino Amides	600
3.1.5.1.2	From Amidines	600
3.1.5.1.3	From 1,3-Oxazolium-5-olates	601
3.1.5.2	Reactions	601
3.1.6	1,3-Diazolium-4-aminides	601
3.1.6.1	Synthesis	602
3.1.6.2	Reactions	603
3.1.7	1,3-Dithiolium-4-olates	604
3.1.7.1	Synthesis	604
3.1.7.1.1	From Dithioglycolic Acids	604
3.1.7.1.2	From Dithiobenzoic Acids	605
3.1.7.2	Reactions	605
3.1.7.2.1	Cycloaddition with Alkynes	606
3.1.7.2.2	Cycloaddition with Alkenes	606
3.1.7.2.3	Cycloaddition with Compounds Containing Carbon-Heteroatom Double Bonds	607
3.1.7.2.4	Photochemical Cycloaddition	607
3.1.8	1,2,3-Oxadiazolium-5-olates (Sydnones)	609
3.1.8.1	Synthesis	609
3.1.8.1.1	From N-Nitroso- α -amino Acids	609
3.1.8.2	Reactions	609
3.1.8.2.1	Cycloadditions with Alkynes	610
3.1.8.2.2	Cycloadditions with Alkenes	611
3.1.8.2.3	Photochemical Reactions	612
3.2	Chemistry of Meso-Ionic Heterocycles of Type-B	614
3.2.1	1,2-Diazolium-4-aminides	614
3.2.1.1	Synthesis	614
3.2.1.2	Reactions	615
3.2.1.2.1	Thermal Isomerization	615

3.2.1.2.2	Reaction with DMAD	616
3.2.2	1,2-Dithiolium-4-olates	616
3.2.2.1	Synthesis	616
3.2.2.1.1	From Propane-1,3-dione Esters	616
3.2.2.1.2	From 1,3-Diarylpropane-1,2,3-triones	617
3.2.2.1.3	From 1,1,3,3-Tetrabromo-1,3-diarylpropan-2-ones	617
3.2.2.2	Reactions	618
3.2.2.2.1	Desulfurization	618
3.2.2.2.2	Reactions with Ammonia and Its Derivatives	618
3.2.2.2.3	Thermal Reactions	620
3.2.3	1,2,3,4-Tetrazolium-5-thiolates	620
3.2.3.1	Synthesis	620
3.2.3.1.1	From Dithizone	620
3.2.3.1.2	From Diphenylthiocarbazide	621
3.2.3.2	Reactions	621
3.2.3.2.1	Alkylation	621
3.2.3.2.2	Thermal Rearrangement	621
3.2.3.2.3	Cycloaddition Reactions	622
3.2.3.2.4	Reactions involving Dehydrodithizone as Acyclic Valence Tautomer	623
