

Table of Contents

1. Thermodynamics and Statistical Mechanics	1
1.1 Introduction	1
1.2 Thermodynamic Formulae and Variables	2
1.3 Statistical Mechanical Formulae	3
1.4 The Field-Density and Coupling-Density Representations	4
1.4.1 Thermodynamic Formalism	5
1.4.2 Lattice Systems	8
1.5 Correlation Functions and Symmetry Properties	10
1.5.1 Correlation Functions	10
1.5.2 Symmetry Properties	12
Examples	14
2. Phase Transitions and Scaling Theory	15
2.1 Introduction	15
2.2 The Geometry of Phase Transitions	17
2.2.1 A Two-Dimensional Phase Space	18
2.2.2 A Three-Dimensional Phase Space	20
2.3 Universality, Fluctuations and Scaling	21
2.3.1 Universality	22
2.3.2 Kadanoff's Scaling Method for the Ising Model	24
2.4 General Scaling Formulation	27
2.4.1 The Kadano, Scaling Hypothesis	27
2.4.2 Approaches to the Transition Region	30
2.4.3 First-Order Transitions	31
2.4.4 Effective Exponents	32
2.5 Logarithmic Singularities	33
2.5.1 The Nightingale-T Hooft Scaling Hypothesis	33
2.5.2 Constraints on Scaling	34
2.5.3 Approaches to the Transition Region	35
2.6 Correlation Functions	37
2.6.1 Scaling Operators and Dimensions	37
2.6.2 Variable Scaling Exponents	40
2.7 Densities and Response Functions	41
2.8 Critical Point and Coexistence Curve	42

2.8.1	Response Functions	44
2.8.2	Critical Exponents	45
2.8.3	Exponent Inequalities	46
2.9	Scaling for a Critical Point	46
2.9.1	Scaling Fields for the Critical Point	47
2.9.2	Approaches to the Critical Point	48
2.9.3	Experimental Variables	50
2.9.4	The Density and Response Functions	51
2.9.5	Asymptotic Forms	51
2.9.6	Critical Exponents and Scaling Laws	52
2.9.7	Scaling for the Coexistence Curve	54
2.10	Mean-Field Theory for the Ising Ferromagnet	55
2.11	Correlation Scaling at a Critical Point	57
2.12	Tricritical Point	58
2.13	Scaling for a Tricritical Point	62
2.13.1	Scaling Fields for the Tricritical Point	62
2.13.2	Tricritical Exponents and Scaling Laws	64
2.13.3	Connected Transition Regions	66
2.14	Corrections to Scaling	69
2.15	Scaling and Universality	70
2.16	Finite-Size Scaling	75
2.16.1	The Finite-Size Scaling Field	76
2.16.2	The Shift and Rounding Exponents	78
2.16.3	Universality and Finite-Size Scaling	80
2.17	Conformal Invariance	81
2.17.1	From Scaling to the Conformal Group	82
2.17.2	Correlation Functions for $d \geq 2$	83
2.17.3	Universal Amplitudes for $d = 2$	84
	Examples	86
3.	Landau and Landau–Ginzburg Theory	89
3.1	The Ferromagnetic Ising Model	89
3.2	Landau Theory for a Critical Point	91
3.3	Landau–Ginzburg Theory for a Critical Point	93
3.3.1	The Gaussian Approximation	94
3.3.2	Gaussian Critical Exponents	97
3.4	The Equilibrium Dilute Ising Model	103
3.5	The 3-State Potts Model	105
3.6	Landau Theory for a Tricritical Point	108
	Examples	111

4. Algebraic Methods in Statistical Mechanics	113
4.1 Introduction	113
4.2 The Thermodynamic Limit	116
4.3 Lower Bounds for Phase Transitions: the Peierls Method	117
4.4 Lower Bounds for the Simple Lattice Fluid	123
4.5 Grand Partition Function Zeros and Phase Transitions	125
4.6 Ruelle's Theorem	127
4.7 The Yang-Lee Circle Theorem	130
4.8 Systems with Pair Interactions	132
4.9 Transfer Matrices	136
4.9.1 The Partition Function	137
4.9.2 Boundary Conditions	140
4.9.3 The Limit $N_2 \rightarrow \infty$	140
4.9.4 Correlation Functions	141
4.9.5 Correlation Lengths and Phase Transitions	145
4.10 The Wood Method	148
4.10.1 Evolution of Partition Function Zeros	149
4.10.2 Connection Curves and Cross-Block Curves	151
4.10.3 The Spin- $\frac{1}{2}$ Square Lattice Ising Model	154
4.10.4 Critical Points and Exponents	159
Examples	163
5. The Eight-Vertex Model	167
5.1 Introduction	167
5.2 Spin Representations	169
5.3 Parameter Space and Ground States	172
5.4 Some Transformations	174
5.5 The Weak-Graph Transformation	176
5.6 Transition Surfaces	177
5.7 The Transfer Matrix	182
5.8 The Free Energy and Magnetization	186
5.9 Critical Behaviour	187
5.10 The Spin Representation and the Ising Model Limit	190
5.10.1 The Isotropic Ising Model With a Four-Spin Coupling	191
5.10.2 The Jüngling Spin Representation	192
5.10.3 The Isotropic Ising Model Without a Four-Spin Coupling	192
5.11 The Six-Vertex Model as a Special Case	195
5.11.1 Low-Temperature Regions (i) and (ii)	195
5.11.2 Low-Temperature Region (iii)	196
5.11.3 High-Temperature Regions (i), (ii) and (iii)	197
5.12 The Eight-Vertex Model and Universality	198
Examples	200

6. Real-Space Renormalization Group Theory	203
6.1 Introduction	203
6.2 The Basic Elements of the Renormalization Group	204
6.3 Renormalization Transformations and Weight Functions	206
6.4 Fixed Points and the Linear Renormalization Group	211
6.5 Free Energy and Densities	214
6.6 Decimation of the One-Dimensional Ising Model	215
6.7 Decimation in Two Dimensions	222
6.8 Lower-Bound and Upper-Bound Approximations	225
6.8.1 An Upper-Bound Method	226
6.8.2 A Lower-Bound Method	228
6.9 The Cumulant Approximation	229
6.10 Bond Moving Approximations	232
6.11 Finite-Lattice Approximations	235
6.12 Variational Approximations	239
6.13 Phenomenological Renormalization	241
6.13.1 The Square Lattice Ising Model	244
6.13.2 Other Models	245
6.13.3 More Than One Coupling	246
6.14 Other Renormalization Group Methods	247
Examples	248
7. Series Methods	251
7.1 Introduction	251
7.2 The Analysis of Series	254
7.2.1 The Ratio Method	254
7.2.2 Padé Approximants	256
7.2.3 The Differential Approximant Method	258
7.3 Low-Temperature Series for the Spin- $\frac{1}{2}$ Ising Model	258
7.4 High-Temperature Series for the Spin- $\frac{1}{2}$ Ising Model	262
7.4.1 The Free Energy	262
7.4.2 Susceptibility Series	264
7.4.3 Coefficient Relations for Susceptibility Series	266
7.5 The Linked-Cluster Expansion	270
7.5.1 Multi-Bonded Graphs	270
7.5.2 Connected Graphs and Stars	273
7.5.3 Moments, Cumulants and Finite Clusters	275
7.6 Applications of the Linked-Cluster Expansion	277
7.6.1 The General- s Ising Model	277
7.6.2 D-Vector Models	279
7.6.3 The Classical Heisenberg Model	280
7.6.4 The Quantum Heisenberg Model	283
7.6.5 Correlations and Susceptibility	286
7.7 Finite Methods	290
7.7.1 The Finite-Cluster Method	291

7.7.2	The Finite-Lattice Method	293
7.8	Results and Analysis	295
7.8.1	High-Temperature Series for Spin- $\frac{1}{2}$ Ising and Potts Models	296
7.8.2	Low-Temperature Series	299
7.8.3	High-Temperature K Expansions	300
	Examples	301
8.	Dimer Assemblies	303
8.1	Introduction	303
8.2	The Dimer Partition Function	304
8.2.1	The Square Lattice Case	306
8.2.2	The Honeycomb Lattice Case	310
8.3	The Modified KDP Model Equivalence	317
8.4	The Ising Model Equivalence	320
8.5	K-Type and O-Type Transitions	324
8.6	The Chain Conformal Transition	326
	Examples	332
A.	Appendices	335
A.1	Fourier Transforms in d Dimensions	335
A.1.1	Discrete Finite Lattices	335
A.1.2	A Continuous Finite Volume	336
A.1.3	A Continuous Infinite Volume	337
A.1.4	A Special Case	338
A.2	The Conformal Group	340
A.3	Group Representation Theory	342
A.3.1	Groups	342
A.3.2	Representations	342
A.3.3	The Block Diagonalization of Transfer Matrices	347
A.3.4	Equivalence Classes	349
A.3.5	Using Equivalence Classes for Block Diagonalization	355
A.3.6	The Transfer Matrix Eigen Problem	357
A.4	Some Transformations in the Complex Plane	360
A.5	Algebraic Functions	363
A.6	Elliptic Integrals, Functions and Nome Series	366
A.6.1	Elliptic Integrals	366
A.6.2	Elliptic Functions	367
A.6.3	Nome Series	368
A.7	Lattices and Graphs	370
A.7.1	Subgraphs	370
A.7.2	Section Graphs	373
A.7.3	Zero-Field Graphs	374
A.7.4	Magnetic Graphs and Coefficient Relations	374
A.7.5	Multi-Bonded Graphs	379

A.7.6 Polygons and Triangulation	380
A.7.7 Oriented Graphs	380
A.8 The Weak-Graph Transformation	381
A.9 The Generalized Moment-Cumulant Relations	386
A.10 Kastelyn's Theorem	389
A.10.1 The Canonical Flux Distribution	389
A.10.2 The Dimer Partition Function	390
A.10.3 Superposition Polynomials and Pfaffians	391
A.11 Determinants of Cyclic Matrices	394
A.12 The T Matrix	396

Statistical Mechanics of Lattice Systems

Volume 2: Exact, Series and Renormalization Group
Methods

Lavis, D.; Bell, G.M.

1999, XII, 430 p., Hardcover

ISBN: 978-3-540-64436-1
