

Table of Contents

Preface to the Second Edition	vii
Preface to the First Edition	ix
List of Symbols	xv
0. Labeled Structures	1
0.1 Species of Structures	2
0.2 Sum and Product of Species	10
0.3 Partitional Composition	13
0.4 Derivation, Pointing, Functorial Composition	16
0.5 The Ring of Isomorphism Classes of Species	19
1. Unlabeled Structures	21
1.1 Group Actions	21
1.2 Orbits, Cosets and Double Cosets	29
1.3 Symmetry Classes of Mappings	36
1.4 Invariant Relations	45
1.5 Hidden Symmetries	50
2. Enumeration of Unlabeled Structures	53
2.1 The Number of Orbits	53
2.2 Enumeration of Symmetry Classes	59
2.3 Application to Incidence Structures	67
2.4 Special Symmetry Classes	73
3. Enumeration by Weight	85
3.1 Weight Functions	85
3.2 Cycle Indicator Polynomials	91
3.3 Sums of Cycle Indicators, Recursive Methods	100
3.4 Applications to Chemistry	103
3.5 A Generalization	109
3.6 The Decomposition Theorem	115

4. Enumeration by Stabilizer Class	121
4.1 Counting by Stabilizer Class	121
4.2 Asymmetric Orbits, Lyndon Words, the Cyclotomic Identity	126
4.3 Tables of Marks and Burnside Matrices	131
4.4 Weighted Enumeration by Stabilizer Class	137
5. Poset and Semigroup Actions	141
5.1 Actions on Posets, Semigroups, Lattices	141
5.2 Examples	150
5.3 Application to Combinatorial Designs	157
5.4 The Burnside Ring	162
6. Representations	169
6.1 Representations of Symmetric Groups	169
6.2 Tableaux and Matrices	181
6.3 The Determinantal Form	187
6.4 Standard Bideterminants	194
7. Further Applications	213
7.1 Schur Polynomials	213
7.2 Symmetric Polynomials	219
7.3 The Diagram Lattice	223
7.4 Unimodality	228
7.5 The Littlewood–Richardson Rule	236
7.6 The Murnaghan–Nakayama Rule	247
7.7 Symmetrization and Permutrization	255
7.8 Plethysm of Representations	260
7.9 Actions on Chains	267
8. Permutations	275
8.1 Multiply Transitive Groups	275
8.2 Root Number Functions	284
8.3 Equations in Groups	293
8.4 Up–Down Sequences	297
8.5 Foulkes Characters	303
8.6 Schubert Polynomials	307
9. Construction and Generation	317
9.1 Orbit Evaluation	318
9.2 Transversals of Symmetry Classes	321
9.3 Orbits of Centralizers	326
9.4 The Homomorphism Principle	329
9.5 Orderly Generation	334
9.6 Generating Orbit Representatives	337
9.7 Symmetry Adapted Bases	341
9.8 Applications of Symmetry Adapted Bases	346

10. Tables	353
10.1 Tables of Marks and Burnside Matrices	353
10.1.1 Cyclic Groups	354
10.1.2 Dihedral Groups	358
10.1.3 Alternating Groups	363
10.1.4 Symmetric Groups	366
10.2 Characters of Symmetric Groups	369
10.2.1 Irreducible Characters and Young Characters	369
10.2.2 Foulkes Tables	378
10.2.3 Character Polynomials	380
10.3 Schubert Polynomials	392
11. Appendix	397
11.1 Groups	397
11.2 Finite Symmetric Groups	399
11.3 Rothe Diagram and Lehmer Code	406
11.4 Linear Representations	412
11.5 Ordinary Characters of Finite Groups	418
11.6 The Möbius Inversion	424
12. Comments and References	429
12.1 Historical Remarks, Books and Review Articles	429
12.2 Further Comments	432
12.3 Suggestions for Further Reading	433
References	437
Index	445

Applied Finite Group Actions

Kerber, A.

1999, XXV, 454 p., Hardcover

ISBN: 978-3-540-65941-9
