
Contents

Preface	v
Contributors	ix
1 Downstream Processing in the Biotechnology Industry: <i>An Overview</i> Manohar Kalyanpur	1
2 Microbial Cell Disruption by High-Pressure Homogenization Anton P. J. Middelberg	11
3 Protein Concentration and Buffer Exchange Using Ultrafiltration Andrew L. Zydney and Ralf Kuriyel	23
4 High-Performance Tangential Flow Filtration for Protein Separations Andrew L. Zydney and Ralf Kuriyel	35
5 Large-Scale Recovery of Protein Inclusion Bodies by Continuous Centrifugation Anton P. J. Middelberg	47
6 Application of Density Gradient Ultracentrifugation Using Zonal Rotors in the Large-Scale Purification of Biomolecules Mohamed A. Desai and Sandra P. Merino	59
7 Application of Chromatography in the Downstream Processing of Biomolecules Mohamed A. Desai, Mark Rayner, Mike Burns, and Dervilla Bermingham	73
8 Affinity Ligand Technology: <i>Optimal Protein Separations for Downstream Processing</i> Ken Jones and Dev Baines	95
9 Immunoaffinity Adsorption in the Large-Scale Isolation of Biomolecules Mohamed A. Desai	109
10 Expanded Bed Adsorption in the Purification of Biomolecules Allan Lihme, Marie Hansen, Morten Olander, and Elias Zafirakos	121
11 Application of HPLC in the Purification of Biomolecules Paul Bradley and Mohamed A. Desai	141

12	Countercurrent Chromatography of Proteins with Polymer Phase Systems	
	Yoichiro Shibusawa, Kazuhiro Matsuda, and Yoichiro Ito	161
13	Practical Aspects and Applications of Radial Flow Chromatography	
	Denise M. Wallworth	173
14	Sterile Filtration and Virus Filtration	
	Ralf Kuriyel and Andrew L. Zydney	185
15	Design and Interpretation of Viral Clearance Studies for Biopharmaceutical Products	
	Allan J. Darling	195
16	Validation of Sterilizing Filters in the Biotechnology Industry	
	Manohar Kalyanpur	211
	Index	223
