# Contents

Preface .....	v
Contributors .....	xiii
1 Nucleic Acid Transfer Using Cationic Lipids <b>Natasha J. Caplen</b> .....	1
2 Optimizing Polyethylenimine-Based Gene Transfer into Mammalian Brain for Analysis of Promoter Regulation and Protein Function <b>Barbara A. Demeneix, Mohamed Ghorbel, and Daniel Goula</b> .....	21
3 Gene Transfer and Drug Delivery by Electronic Pulse Delivery: <i>A Nonviral Delivery Approach</i> <b>Xi Zhao</b> .....	37
4 Strategies for Improving the Frequency and Assessment of Homologous Recombination <b>Nancy Smyth Templeton</b> .....	45
5 Effective Gene Transfer Using Viral Vectors Based on SV40 <b>David S. Strayer</b> .....	61
6 Rapid Generation of Isogenic Mammalian Cell Lines Expressing Recombinant Transgenes by Use of Cre Recombinase <b>Bruce D. Bethke and Brian Sauer</b> .....	75
7 Site-Directed Alteration of DNA by Small-Fragment Homologous Replacement <b>Kaarin K. Goncz and Dieter C. Gruenert</b> .....	85
8 Mutation Correction by Homologous Recombination with an Adenovirus Vector <b>Ayumi Fujita-Kusano, Yasuhiro Naito, Izumu Saito, and Ichizo Kobayashi</b> .....	101
9 Site-Specific Targeting of DNA Plasmids to Chromosome 19 Using AAV <i>Cis</i> and <i>Trans</i> Sequences <b>Samuel M. Young Jr., Weidong Xiao, and Richard Jude Samulski</b> .....	111

10	Adeno-Associated Virus Based Gene Therapy in Skeletal Muscle <b>Richard J. Bartlett and Jesica M. McCue</b> .....	127
11	Rapid Establishment of Myeloma Cell Lines Expressing Fab(Tac)-Protamine, a Targetable Protein Vector, Directed Against High-Affinity $\alpha$ -Chain of Human Interleukin-2 Receptor <b>Sun U. Song and Wayne A. Marasco</b> .....	157
12	EBV-Derived Episomes to Probe Chromatin Structure and Gene Expression in Human Cells <b>Juliette Fivaz, M. Chiara Bassi, Stéphane Pinaud, Larry Richman, Melanie Price, and Jovan Mirkovitch</b> .....	167
13	Triplex-Directed Site-Specific Genome Modification <b>Karen M. Vasquez and John H. Wilson</b> .....	183
14	Use of Quantitative Ligation-Mediated Polymerase Chain Reaction to Detect Gene Targeting by Alkylating Oligodeoxynucleotides <b>Howard B. Gamper, Irina Afonina, Evgeniy Belousov, Michael W. Reed, and Mikhail A. Podyminogin</b> .....	201
15	Gene Targeting in Plants via Site-Directed Mutagenesis <b>Peter B. Kipp, Joyce M. Van Eck, Peter R. Beetham, and Gregory D. May</b> .....	213
16	Antisense Oligonucleotides as Modulators of Pre-mRNA Splicing <b>Halina Sierakowska, Sudhir Agrawal, and Ryszard Kole</b> .....	223
	Index .....	235
