Introduction	1
1 Weak solutions to boundary value problems in the deformation theory of perfect elastoplasticity	5
1.0 Preliminaries	5
1.1 The classical boundary value problem for the equilibrium state of a perfect elastoplastic body and its primary functional formulation	6
1.2 Relaxation of convex variational problems in non reflexive spaces. General construction	15
1.3 Weak solutions to variational problems of perfect elastoplasticity	27
2 Differentiability properties of weak solutions to boundary value problems in the deformation theory of plasticity	40
2.0 Preliminaries	40
2.1 Formulation of the main results	42
2.2 Approximation and proof of Lemma 2.1.1	52
2.3 Proof of Theorem 2.1.1 and a local estimate of Caccioppoli-type for the stress tensor	57
2.4 Estimates for solutions of certain systems of PDE's with constant coefficients	71
2.5 The main lemma and its iteration	76
2.6 Proof of Theorem 2.1.2	89
2.7 Open Problems	98
2.8 Remarks on the regularity of minimizers of variational functionals from the deformation theory of plasticity with power hardening .	100

Appendix A	107
A.1 Density of smooth functions in spaces of tensor-valued functions	107
A.2 Density of smooth functions in spaces of vector-valued functions	111
A.3 Some properties of the space $BD(\Omega; \mathbb{R}^n)$	116
A.4 Jensen's inequality	126
3 Quasi-static fluids of generalized Newtonian type	131
3.0 Preliminaries	131
3.1 Partial C^1 regularity in the variational setting	143
3.2 Local boundedness of the strain velocity	167
3.3 The two-dimensional case	180
3.4 The Bingham variational inequality in dimensions two and three	193
3.5 Some open problems and comments concerning extensions	204
4 Fluids of Prandtl-Eyring type and plastic materials with logarithmic hardening law	207
4.0 Preliminaries	207
4.1 Some function spaces related to the Prandtl-Eyring fluid model	211
4.2 Existence of higher order weak derivatives and a Caccioppoli-type inequality	216
4.3 Blow-up: the proof of Theorem 4.1.1 for $n = 3$	228
4.4 The two-dimensional case	235
4.5 Partial regularity for plastic materials with logarithmic hardening	237
4.6 A general class of constitutive relations	248
Appendix B	251
B.1 Density results	251
Notation and tools from functional analysis	254
Bibliography	260
Index	268

Variational Methods for Problems from Plasticity Theory
and for Generalized Newtonian Fluids

Fuchs, M.; Seregin, G.

2000, VIII, 276 p., Softcover

ISBN: 978-3-540-41397-4
