

Table of Contents

1	Introduction	1
1.1	Equivalence Problems	3
1.2	Isomorphism Problems	5
1.2.1	Congruence Problems	5
1.2.2	Linear and Affine Equivalence Problems	6
1.2.3	History	6
1.2.4	New Results and Background	8
2	Preliminaries	11
2.1	Complexity Classes	11
2.2	Reductions	13
2.3	Probabilistic Complexity Classes	13
2.4	Probabilistic Quantifiers	16
2.5	Interactive Proofs	17
2.6	Isomorphisms and Other Transformations	21
3	Boolean Formulas and Circuits	23
3.1	An Interactive Proof for FNI	24
3.1.1	A Randomized Normal Form	25
3.1.2	An Almost Uniform Generator	31
3.1.3	Approximate Counting	36
3.1.4	The Protocol	43
3.1.5	Extensions	45
3.2	Comparing FI with Other Problems	51
3.2.1	USAT and FC	52
3.2.2	And- and Or-functions	55
3.2.3	FA and UOCLIQUE	62

4	Branching Programs	65
4.1	Read- k -Times Branching Programs	68
4.1.1	An Example	69
4.1.2	The Satisfiability Problem	70
4.1.3	Arithmetization	72
4.1.4	$(1, +k)$ -Branching Programs	73
4.2	Polynomials	76
4.2.1	The Equivalence Problem	76
4.2.2	The Isomorphism Problem	79
4.2.3	Extension to Arithmetic Circuits	83
4.3	Ordered Branching Programs	85
4.3.1	Minimization and Equivalence	86
4.3.2	Boolean Combinations	90
4.3.3	The Computational Power	92
4.3.4	Generalized Models	96
4.4	Nondeterministic Branching Programs	97
4.5	Parity Branching Programs	99
4.6	Probabilistic Branching Programs	105
4.6.1	Basic Properties	106
4.6.2	The Computational Power	107
4.6.3	Satisfiability Problems	111
4.6.4	An Efficient Satisfiability Test for BP-OBDDs with Small Error	113
	References	121
	Index	131

The Computational Complexity of Equivalence and
Isomorphism Problems

Thierauf, Th.

2000, VIII, 135 p., Softcover

ISBN: 978-3-540-41032-4
