

Table of Contents

Introduction	1
1. Equilibrium Equations	11
1.1 Vector Equilibrium Equations	11
1.1.1 Basic Definitions and Hypothesis	11
1.1.2 Vector Equilibrium Equations	13
1.1.3 Relationship Between the Vectors \mathbf{M} and \mathbf{a}	15
1.1.4 Relationship Between the Vectors \mathbf{a} and \mathcal{V}	18
1.1.5 Displacement of an Axial Line	18
1.1.6 Nondimensional Form of Equations	20
1.1.7 Boundary Conditions	22
1.2 External Loads	23
1.2.1 Types of External Loads	23
1.2.2 Increments of External Loads	29
1.3 Equilibrium Equations in the Attached and Cartesian Coordinate Systems	33
1.3.1 Vector Equilibrium Equations in the Attached Coordinate System	33
1.3.2 Equilibrium Equations in the Attached Coordinate Frame	35
1.3.3 Special Cases of Equilibrium Equations in the Attached Coordinate Frame	36
1.3.4 Vector Equilibrium Equations in the Cartesian Coordinate System	40
1.3.5 Equilibrium Equations in the Cartesian Coordinate System	41
1.4 Equilibrium Equations for Small Displacements and Angles of Rotation	42
1.4.1 Equilibrium Equations in the Attached Coordinate System	42
1.4.2 Equilibrium Equations of the Zeroth Approximation in the Attached Basis	45
1.4.3 Equilibrium Equations of the Zeroth Approximation in the Cartesian Coordinate System	47

1.4.4	Increments of External Loads	49
1.4.5	Equilibrium Equations of the First Approximation in the Attached Coordinate System	51
1.5	Problems	54
2.	Integration of Equilibrium Equations	57
2.1	Integration of Linear Equilibrium Equations	57
2.1.1	Equilibrium Equations of the Zeroth Approximation ..	57
2.1.2	Picard Iteration Method for Determination of the Fundamental Matrix $K(\eta)$	65
2.2	Equilibrium Equations for Rods with Lateral Supports	72
2.2.1	Rods with Lateral Hinge Supports	72
2.2.2	Rods with Lateral Elastic Supports	74
2.2.3	Rods with Predetermined Displacement of Some Cross Sections	76
2.3	Method of Step-by-Step Loading	77
2.3.1	Equilibrium Equations for One Step of Loading	77
2.3.2	Integration of the Equilibrium Equations	81
2.3.3	Method of Successive Approximations	83
3.	Static Stability of Rods	89
3.1	Basic Concepts	89
3.1.1	State of Equilibrium	89
3.1.2	Examples	89
3.2	Equilibrium Equations for a Rod After Loss of Stability	93
3.2.1	Vector Equilibrium Equations in the Attached Coordinate System	93
3.2.2	Increments of Forces and Moments	95
3.2.3	Equations in the Form Suitable for Integration	96
3.3	Plane Curvilinear Rods	98
3.3.1	Rods of Plane Axial Line Before Loss of Stability	98
3.3.2	Stability of Plane Configuration of a Ring	101
3.3.3	Stability of a Plane Configuration of a Rod with Lateral Supports	108
3.4	Increments of Loads at Loss of Stability	111
3.4.1	Forces Directed at a Fixed Point	111
3.4.2	Forces Which Follow a Straight Line	112
3.4.3	Increments of Concentrated Forces Which Follow a Straight Line: Small Deflections of a Rod	114
3.4.4	Increments of Concentrated Forces Directed at a Fixed Point: Large Deflections of a Rod	115
3.4.5	Increments of Concentrated Forces Directed at a Fixed Point: Small Deflections of a Rod	117
3.5	Computer-Oriented Methods	117
3.5.1	Natural and Critical Configurations Coincide	117

3.5.2	Natural and Critical Configurations Differ	122
3.5.3	Concentrated Loads Applied to Arbitrary Cross Sections: Determination of Critical Loads.....	123
3.6	Problems	125
4.	Straight Rods	129
4.1	Rods of Straight Natural Configuration	129
4.1.1	Traditional Routines of Derivation of Equilibrium Equations	129
4.1.2	General Equilibrium Equations in the Case of Straight Rods	135
4.2	Equilibrium Equations for Small Displacements and Angles of Rotation	138
4.2.1	Vector Equations	138
4.2.2	Equilibrium Equations in the Attached Coordinate System.....	139
4.2.3	Equilibrium Equations in the Cartesian Coordinate System.....	152
4.3	Naturally Twisted Straight Rods	155
4.3.1	Nonlinear Vector Equations of Equilibrium	155
4.3.2	Linear Vector Equations of Equilibrium	155
4.3.3	Equilibrium Equations in the Attached Coordinate System.....	156
4.4	Straight Rods on Elastic Foundation	158
4.4.1	Forces Acting on a Rod	158
4.4.2	Equilibrium Equations	160
4.4.3	Krylov's Functions	161
4.4.4	Equilibrium Equations for Rods of Constant Cross Section.....	162
4.4.5	Equilibrium Equations for Rods with Lateral Supports	167
4.4.6	Equilibrium Equations for Rods of Varying Cross Section.....	168
4.5	Application of Approximate Methods	169
4.5.1	Principle of Virtual Displacements	169
4.5.2	Principle of Minimum of Potential Energy	181
4.5.3	Ritz Method	184
4.5.4	Approximating Methods Based on Lagrangian Multipliers	185
4.6	Stability of Compressed-Twisted Rods	186
4.7	Stability of Straight Rods with Local Constraints	202
4.8	Problems	208

5. Curvilinear Rods	211
5.1 Plane Rods	211
5.1.1 Equilibrium Equations for a Rod Whose Axial Line Remains a Plane Curve During Deformation	211
5.1.2 Nonlinear Equilibrium Equations in the Cartesian Coordinate System	212
5.1.3 Equilibrium Equations for a Rod Whose Axial Line is a Spatial Curve in a Deformed Configuration	219
5.1.4 Equilibrium Equations in the Case of Small Displacement of Axial Points	220
5.2 Elementary Theory of Cylindrical Springs	228
5.2.1 Helical Rods	228
5.2.2 Linear Theory of Cylindrical Springs	229
5.2.3 Basics of Nonlinear Theory of Cylindrical Springs	235
5.3 General Theory of Cylindrical Springs	236
5.3.1 Linear Equilibrium Equations	236
5.3.2 Cylindrical Springs of Variable Angle of Helix	249
5.4 Flexible Rods in a Rigid Conduit	252
5.4.1 Statement of the Problem	252
5.4.2 Equilibrium Equations	253
5.4.3 Equilibrium Equations for Friction-Free Case	255
5.4.4 Specialization of Equilibrium Equations (5.151) for Rods of Different Bending Stiffnesses ($A_{22} \neq A_{33}$)	255
5.4.5 Specialization of Equilibrium Equations for Rods with Equal Bending Stiffnesses ($A_{22} = A_{33}$)	257
5.4.6 Determination of Twisting Moments for Rods with Equal Bending Stiffnesses ($A_{22} = A_{33}$)	257
5.5 Stability of Plane Curvilinear Rods	262
5.6 Problems	269
6. Rods Interacting with Liquid or Air Flows	271
6.1 Introduction	271
6.2 Basic Concepts of Aerohydrodynamics	273
6.2.1 Eulerian and Lagrangian Representations	273
6.2.2 Basic Principles of Aerodynamics	276
6.3 Experimental Results	281
6.4 Aerodynamic Forces Acting on Rods of Circular Cross Section	283
6.5 Stress-Strain State of a Rod Interacting with an Air Flow	292
6.6 Aerodynamic Forces Acting on Rods of Noncircular Cross Section	298
6.6.1 Components of \mathbf{q}_{n_1} and \mathbf{q}_l in the Cartesian Coordinate System	300
6.6.2 Components of \mathbf{q}_{n_1} and \mathbf{q}_l in the Attached Coordinate System	303

6.7	Increments of Aerodynamic Forces at Small Displacements of Axial Points	305
6.7.1	Rods of Noncircular Cross Section	307
6.8	Rods Containing Internal Liquid Flows	310
A.	Appendices	321
A.1	Elements of Vector Algebra	321
A.1.1	Vector Bases; Coordinates of Vectors	321
A.1.2	Scalar Product	324
A.1.3	Vector Product	325
A.1.4	Scalar Triple Product	327
A.1.5	Vector Triple Product	327
A.1.6	Transformation of Base Vectors	328
A.2	Basics of Differential Geometry	334
A.2.1	The Derivative of a Radius Vector	334
A.2.2	Spatial Curves	335
A.2.3	Derivatives of the Base Vectors	337
A.2.4	Geometrical Meaning of the Components of the Vector \mathbf{a}	338
A.2.5	Relationship Between \mathbf{a}_i and ϑ_j	342
A.2.6	Derivatives of a Vector in the Attached Coordinate System	346
A.3	Increments of the Components of a Vector under Transformation of the Attached Coordinate System	347
A.4	Distributions	349
A.4.1	The δ -function	349
A.4.2	The Nondimensional δ -function	351
A.4.3	The Heaviside Function	352
A.4.4	Applications of the δ -function	353
A.4.5	Integrals Containing Derivatives of the δ -function	353
A.5	Direction Cosines of the Unit Vector Tangent to a Rod Axis	354
A.5.1	Plane Curve	354
A.5.2	Spatial Curve	356
A.6	Equations of the First and Higher Approximation	356
B.	Solution of the Problems	361
B.1	To Chapter 1	361
B.2	To Chapter 3	367
B.3	To Chapter 4	374
B.4	To Chapter 5	381
