

Contents

Part I. The First Stars – Introduction and Context

Population III by Popular Demand – Progress and Previews <i>Timothy C. Beers</i>	3
--	---

Did the Universe Start at Zero Metallicity? <i>Karsten Jedamzik</i>	15
---	----

Death of Stellar Baryonic Dark Matter <i>Katherine Freese, Brian Fields, David Graff</i>	18
--	----

Part II. Observations of Extremely Metal-Poor Galactic Stars

Abundances of the Light Elements in the Ultra-Metal-Poor Stars <i>François Spite</i>	27
--	----

Heavy Elements in Very Metal-Poor Stars <i>Sean G. Ryan</i>	37
---	----

Finding the First Stars: The Hamburg/ESO Objective Prism Survey <i>Norbert Christlieb, Dieter Reimers, Lutz Wisotzki, Johannes Reetz, Thomas Gehren, Timothy C. Beers</i>	49
---	----

Copper and Zinc Abundances in Metal-Poor Stars <i>Francesca Primas, Eric Brugamyer, Chris Sneden, Jeremy R. King, Timothy C. Beers, Ann M. Boesgaard, Constantine P. Deliyannis</i>	51
---	----

CNO Abundances in Metal-Poor Unevolved Stars <i>Garik Israelian, Ramón J. García López, Rafael Rebolo</i>	56
---	----

CHCN Very Metal-Poor Stars: Are These the Missing Pop III? <i>Vanessa Hill, Beatriz Barbay, François Spite, Monique Spite, Roger Cayrel, Birgitta Nordström, Timothy C. Beers</i>	62
---	----

Preliminary Abundance Ratios in an Extremely Metal-Poor Binary Star <i>Birgitta Nordström, Eric Depagne, Monique Spite, François Spite, Vanessa Hill, Roger Cayrel, Timothy C. Beers</i>	64
--	----

Three Very Metal-Poor, Extremely Wide Binaries <i>Christine Allen, Arcadio Poveda, M.A. Herrera</i>	66
And if Thick-Disk Stars Were the First Stars? <i>Klaus Fuhrmann</i>	68
Gravities of Metal-Poor Halo Dwarfs and the Age of the Universe <i>Andreas J. Korn, Thomas Gehren</i>	75
Kinematical Properties of Very Metal-Deficient Stars Based on a Large Unbiased Sample <i>Masashi Chiba</i>	77
<hr/>	
Part III. The First Stars – Evolution and Nucleosynthesis	
<hr/>	
The Peculiar Evolutionary Behaviour of Population III Stars <i>Vittorio Castellani</i>	85
Evolution of Pop III Stars <i>Cesare Chiosi</i>	95
The Evolutionary Properties of Low-Mass Pop III Stars Including Effects of External Pollution <i>Santi Cassisi, Maurizio Salaris, Achim Weiss, Helmut Schlattl</i>	111
Carbon Nucleosynthesis in Metal-Free Low-Mass Stars <i>Helmut Schlattl, Achim Weiss, Santi Cassisi, Maurizio Salaris</i>	117
Evolutionary Models of Zero Metallicity Stars <i>Paola Marigo, Cesare Chiosi, Léo Girardi, Tiziana Sarrubbi</i>	119
Evolution and Nucleosynthesis in Massive Stars of Zero Metallicity <i>Alexander Heger, Stan E. Woosley, Richard Waters</i>	121
Wind Models and Ionizing Fluxes of Massive Stars at Very Low Metallicity <i>Rolf-Peter Kudritzki</i>	127
Model Atmospheres and Radiatively Driven Winds of Metal-Poor Stars <i>Ivan Hubeny, Thierry Lanz, Sally Heap</i>	133
Synthetic Stellar Clusters for Pop III <i>Gabriella Raimondo, Enzo Brocato, Santi Cassisi, Vittorio Castellani</i> ..	135

Chemical Yields from the First Stars*Laura Portinari* 137**Neutron Capture Nucleosynthesis
in Early Galactic Environments***James W. Truran, John J. Cowan, Christopher Sneden,
Debra L. Burris, Catherine A. Pilachowski* 142**Stellar and Nuclear-Physics Constraints
on Two r -Process Components in the Early Galaxy***Bernd Pfeiffer, Karl-Ludwig Kratz, Ulrich Ott,
Friedrich-Karl Thielemann, Chris Sneden* 148**Evolution and Nucleosynthesis of Metal-Free Massive Stars***Hideyuki Umeda, Ken'ichi Nomoto, Takayoshi Nakamura* 150**Dependence of r -Process Yields on the Progenitor Masses
of Type II Supernovae***Shinya Wanajo, Kaori Otsuki, Toshitaka Kajino, Yuhri Ishimaru* 174**A New Test of SN II Models and Their Predictions Regarding
Nucleosynthesis: The Boron Isotopic Ratio***Luisa Rebull, Francesca Primas, Douglas Duncan* 176

Part IV. Feedback on the Environment

**A New Model for Chemical Evolution of the Galactic Halo:
Formulation and Applications***Takuji Tsujimoto, Toshikazu Shigeyama, Yuzuru Yoshii* 181**A New Model for Chemical Evolution
in the Galactic Halo: First Stars with Heavy Elements***Toshikazu Shigeyama, Takuji Tsujimoto* 183**Light and Metals from Population III Stars***Jason Tumlinson* 185**The Metallicity Enrichment of the First Generation
Star of Our Galaxy***Jian Rong Shi, Gang Zhao, Ye Lu* 187**Enrichment of Neutron-Capture Elements
in Our Galaxy at the Early Epoch***Yuhri Ishimaru, Shinya Wanajo* 189

Metal-Poor Halo Stars as Tracers of ISM Mixing Processes During Halo Formation	
<i>Dominik Argast, Markus Samland, Ortwin E. Gerhard, Friedrich-Karl Thielemann</i>	194
The EASE Scenario: Dynamical Study of the Supernova Phase	
<i>Geneviève Parmentier, Emmanuel Jehin, Pierre Magain, Arlette Noels, Anne Thoul</i>	199
The EASE Scenario: A New Origin for Metal-Poor Stars?	
<i>Emmanuel Jehin, Pierre Magain, Arlette Noels, Geneviève Parmentier, Anne Thoul</i>	204
Numerical Simulations of the Galaxy Formation	
<i>Kenji Bekki, Masashi Chiba</i>	206
Cosmological Reionization by Stellar Sources	
<i>Nickolay Y. Gnedin</i>	208
The Impact of Pop III Stars on Reionization	
<i>Andrea Ferrara, Benedetta Ciardi</i>	213
Zero Metallicity Stellar Sources and the Reionization Epoch	
<i>Paolo Cojazzi, Alessandro Bressan, Francesco Lucchin, Ornella Pantano</i>	217
The Radiative Feedback from the First Stars and Quasars and the End of the Dark Age	
<i>Zoltan Haiman</i>	219
Temperature of the First H II Regions	
<i>Thomas Beckert</i>	225
<hr/>	
Part V. Formation of the First Stars	
<hr/>	
Chemistry and Cooling of the Primordial Gas	
<i>Daniele Galli, Francesco Palla</i>	229
The First Stars: Where Did They Form?	
<i>Jordi Miralda-Escudé</i>	242
First Structure Formation and the First Stars	
<i>Michael L. Norman, Tom Abel, Greg Bryan</i>	250
The Destruction of Molecular Hydrogen	
<i>Simon Glover</i>	261

Fragmentation of Primordial Gas Clouds: On the Mass of the First Stars	
<i>Fumitaka Nakamura, Masayuki Umemura</i>	263
On the Formation of Primordial Stars and Pop III Luminous Objects	
<i>Ryoichi Nishi, Hajime Susa, Kazuyuki Omukai</i>	268
Collapse and Fragmentation of Rotating Primordial Clouds	
<i>Toru Tsuribe</i>	273
The Effect of Spin on the Fragmentation of Primordial Gas	
<i>Volker Bromm, Paolo S. Coppi, Richard B. Larson</i>	275
Protostellar Collapse with Various Metallicities	
<i>Kazuyuki Omukai</i>	277
Does Deuterium Enable the Formation of Primordial Brown Dwarfs?	
<i>Hideya Uehara, Shu-ichiro Inutsuka</i>	279
<hr/>	
Part VI. Observational Clues from Galaxies at High z or Low Z	
<hr/>	
Local Dwarf Galaxies: Windows on Life at High z with Low Z	
<i>Mario Mateo</i>	283
Blue Compact Dwarf Galaxies – Home to the Latest of the First Stars?	
<i>Regina E. Schulte-Ladbeck, Ulrich Hopp, Mary M. Crone, Laura Greggio</i>	293
On the Origin of Nitrogen in Low-Metallicity Galaxies	
<i>Leonid S. Pilyugin</i>	298
On the Evolutionary Status of I Zw 18	
<i>Yuri Izotov, Polichronis Papaderos, Trinh Thuan, Klaus Fricke, Craig Foltz, Natalia Guseva</i>	303
The First Stars: Clues from the Spectra of QSOs and High Redshift Galaxies	
<i>Max Pettini</i>	305
Evidence for Large Scale Structure in the Lyα Forest at $z > 2.6$	
<i>Gerard M. Williger, Alain Smette, Cyril Hazard, Jack A. Baldwin, Richard G. McMahon</i>	319

**Galactic Chemical Evolution
and Damped Lyman α Absorbers**
Helmut Meusinger, Rajko Thon 321

The HeII Gunn–Peterson Effect
Sara R. Heap, Ivan Hubeny, Alain Smette, Gerard Williger 323

Part VII. A New View of the First Stars

Where Are the First Stars Now?
Simon D.M. White, Volker Springel 327

**Observational Constraints on the Nature of the First Stars –
Final Comments**
Timothy C. Beers 336

The First Stars: Final Remarks
Richard B. Larson 343

List of Participants 349

Author Index 355

The First Stars

Proceedings of the MPA/ESO Workshop Held at
Garching, Germany, 4-6 August 1999

Weiss, A.; Abel, T.G.; Hill, V. (Eds.)

2000, XII, 356 p. 41 illus., Hardcover

ISBN: 978-3-540-67222-7
