

Contents

Introduction	1
Part One. Linear Equations	9
Chapter 1. Existence of regular solutions	9
1.1. Preliminaries	9
1.2. The case $f(x) < 0$	12
1.3. Π - and Γ - varying solutions	21
1.4. The case of $f(x)$ of arbitrary sign	26
1.5. Regular boundedness of solutions	40
1.6. Generalizations	41
1.7. Examples	44
1.8. Comments	46
Chapter 2. Asymptotic behavior of regular solutions	49
2.1. Slowly varying solutions	49
2.1. a) The case of $f(x)$ of arbitrary sign	49
2.2. Regularly varying solutions	57
2.3. On zeros of oscillating solutions	62
2.4. Examples	65
2.5. Comments	70

Part Two.	Nonlinear Equations	71
Chapter 3.	Equations of Thomas-Fermi type	71
3.1.	Introduction and preliminaries	71
3.2.	The case of regularly varying f and ϕ	75
3.3.	Examples	89
3.4.	The case of rapidly varying f or ϕ	90
3.5.	Examples	99
3.6.	A more general case	102
Chapter 4.	An equation arising in boundary-layer Theory	105
4.1.	Introduction	105
4.2.	Existence and uniqueness	106
4.3.	Estimates and asymptotic behavior of solutions	109
4.4.	Comments	114
Appendix.	Properties of Regularly Varying and Related Functions	115
References	119
Index	125
